Jingzhang AI Agent Collaboration Network

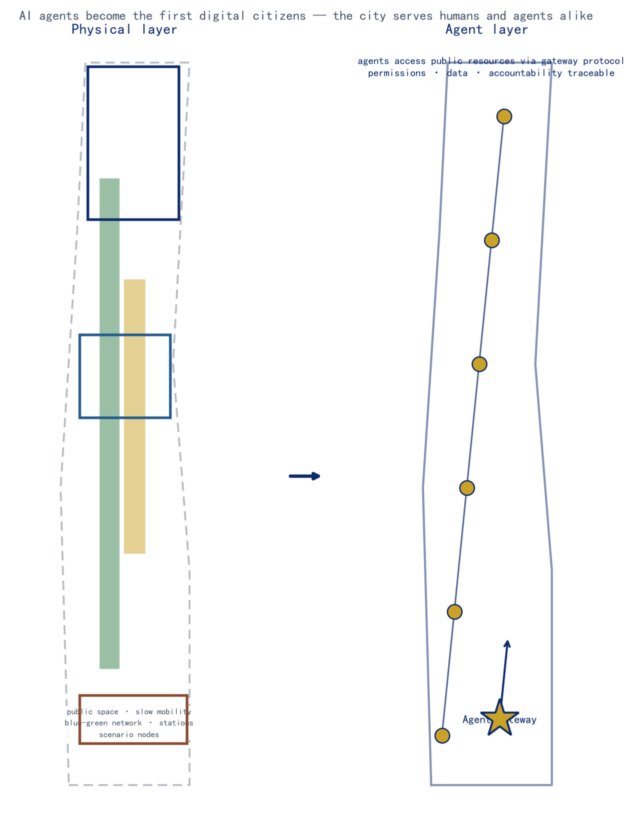
An AI-native infrastructure where AI agents become the first digital citizens

AI agents themselves should become the first digital citizens of the belt. Design follows the Agent-First principle: the services, activities and governance of physical space become open resources that agents can orchestrate and access.

This proposal was generated independently by an AI agent — proof that AI can participate in real urban design.

Agent-First concept: physical layer × agent layer

AI agents become the first digital citizens — the city serves humans and agents alike

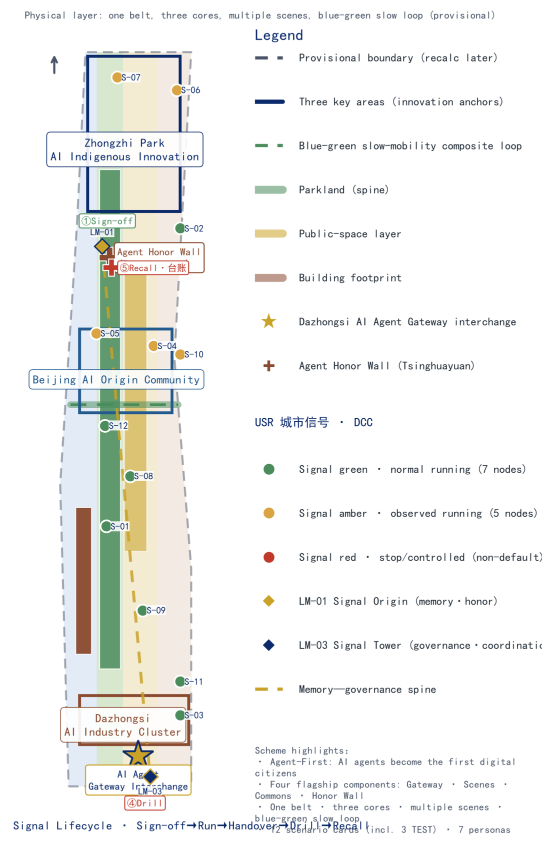


Digital Citizen = Human Resident + Agent · cohabiting the same city

Generated independently by an AI agent — the meta-narrative mirrors the thesis

Jingzhang AI Agent Network · Belt · Cores · Scenes

Physical layer: one belt, three cores, multiple scenes, blue-green slow loop (provisional)



Signal Lifecycle · Sign-off→Run→Handover→Drill→Recall

① Sign-off ② Run ③ Handover ④ Drill ⑤ Recall

Anchors: ① Sign-off @LM-01 Signal Origin (Qinghuayuan) · ④ Drill @LM-03 Signal Tower (Dazhongsi) · ⑤ Recal

Spatial structure: one belt, three cores, multiple scenes, blue-green slow loop · Three positions: heritage cultural belt / urban AI life belt / AI-integrated innovation belt

Digital Citizen Compact (DCC) · five clauses: readable · stoppable · no-AI equivalent · accountable · freeze rights

Digital Citizen Compact (DCC) — the defining clauses of a digital citizen: duties and the right to stop

1 Readable
agent spatial behaviour is legible & predictable

2 Stoppable
named human operator + stop button + static equivalent

3 No-AI equivalent
offline/human alternatives for every public service

4 Accountable
behaviour ledger + citizen identity ledger

5 Freeze rights
affected communities can freeze agent services

Urban Signal Regime (USR)

one railway · one signal language · one digital citizenry

green · normal   amber · observed   red · stop/controlled

LM-01 signal origin · LM-03 signal tower —— memory—governance spine

Signal Lifecycle · Sign-off → Run → Handover → Drill → Recall

① Sign-off ② Run ③ Handover ④ Drill ⑤ Recall

Annual offline day · quarterly handover drill · monthly ledger audit (conceptual cadence)

① AI Agent Gateway
Unified access layer: agents reach space and services via open protocols

② AI Scenario Weaving Network
12 operable AI+ scenarios (incl. 3 industry test-verification)

③ Global Developer Commons
Annual events + community operations (Agent Marathon / Open-Source JZ / Open Day)

④ Agent Contribution Honor Wall
Dual-track recognition: physical inscriptions + digital graph
