Jing-Zhang Open Pulse v3.3 — English review drawings

The spatial source graphics are preserved and paired with English labels/translation panels. All geometry remains provisional and non-statutory until official survey, planning and engineering review.

01 · Component and operations lifecycle

English translation of figure text

The source graphic is preserved above; this panel translates its detected text.

A full lifecycle for each public token / TOKEN → TEST → RETURN
01 Request · public request
02 Review · data + access + RACI
03 Operate · bounded window + human lead
04 Review · SLA + complaint + evidence
05 Return · ordinary public use
RACI = owner + accountable lead; SLA = response + recovery clock; COST = relative band only; DATA = minimum + retention; STOP = rollback + non-AI equivalent.
14 scenario rows in scenario-operation-matrix.json. Thresholds are design gates, not statutory service levels.

Image evidence: self-generated/derived display graphic; see sources.json, copyright-ledger.json and metrics/evidence assets for provenance and boundaries.

02 · Construction, participation and feedback

English translation of figure text

The source graphic is preserved above; this panel translates its detected text.

06 / Construction and participation: every window can exit
Turn concepts into evidence, responsibility and stop gates; keep unknown states visible.
CR-01 Data and site lock: question, user and versioned boundary → ownership, survey and conflict table → stop when ownership, fire or responsible party is unclear.
CR-02 Public path and passive interface: permitted site and management piece → barrier-free route and maintenance schedule → stop on access, maintenance conflict or ponding.
CR-03 Heat, water and lifeline: geometry version and calibration plan → heat/water/drainage/fire review → stop when calibration has no safe route.
CR-04 Bounded, human-led window: permission, responsibility and human baseline → opening, complaint and event log → stop after a major incident or failed handover.
CR-05 Retain, adapt or exit: window end or publication stop → public comparison, clearance and restoration → stop when evidence is insufficient or responsibility is vacant.
Current participation state: main sync known; local verification known; peer comparison known; field baseline unknown; resident consultation not started; public pilot not started.
JSON index: construction-readiness.json + participation-cycle.json. Concept evidence only; not a permit or field result.

Image evidence: self-generated/derived display graphic; see sources.json, copyright-ledger.json and metrics/evidence assets for provenance and boundaries.

03 · Identity system and wayfinding

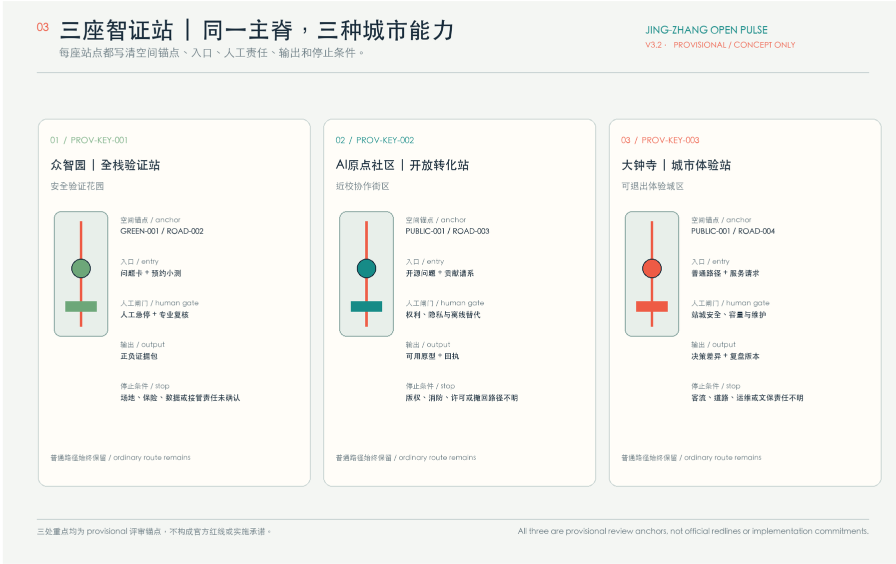
English translation of figure text

The source graphic is preserved above; this panel translates its detected text.

Identity system · two rails / three nodes / two switches
Construction rule: two parallel rails · three public nodes · two switch diamonds.
Public components: status board — what is booked / who is accountable; stitch threshold — step-free, audible, tactile crossing; rain tree pit — shade + storage + work order; withdrawal bay — robot stops without blocking people.
Palette: rail graphite, public jade, open blue, civic amber, human coral.
Concept direction · no registered mark · every active component requires a passive human equivalent and a withdrawal path.

Image evidence: self-generated/derived display graphic; see sources.json, copyright-ledger.json and metrics/evidence assets for provenance and boundaries.

04 · Three key areas and scenario anchors



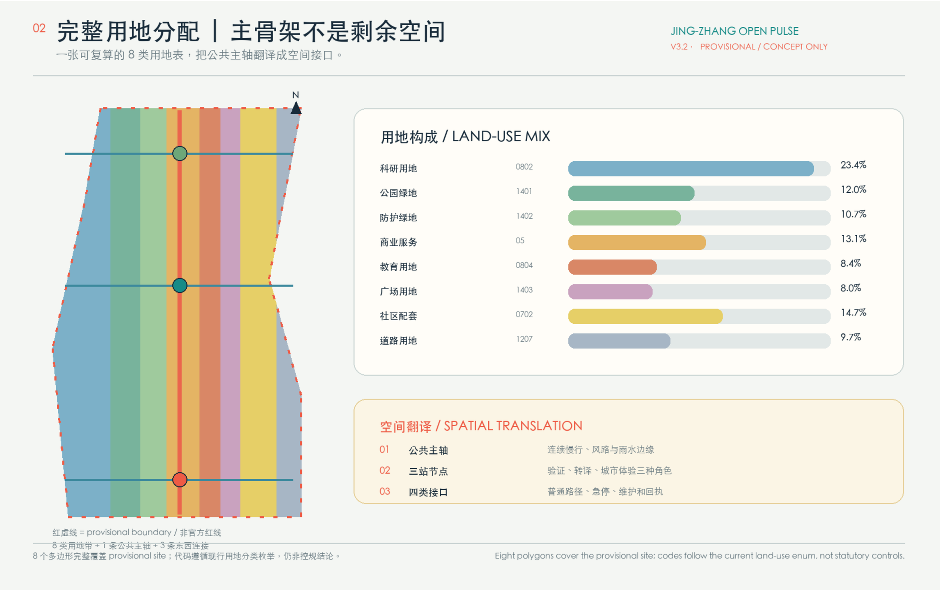
English translation of figure text

The source graphic is preserved above; this panel translates its detected text.

03 / Three proof stations, one public spine, three urban capabilities
Zhongzhiyuan | full-stack validation | safety verification garden. Anchor: GREEN-001 / ROAD-002. Entry: issue card + bounded test. Human gate: human e-stop + specialist review. Output: positive / negative evidence. Stop: site, insurance, data or takeover owner missing.
AI Origin | open transfer | campus collaboration street. Anchor: PUBLIC-001 / ROAD-003. Entry: open question + lineage. Human gate: rights, privacy + offline fallback. Output: usable prototype + receipt. Stop: copyright, fire, permit or withdrawal unclear.
Dazhongsi | civic experience | reversible experience district. Anchor: PUBLIC-001 / ROAD-004. Entry: ordinary route + service request. Human gate: station safety, capacity + maintenance. Output: decision delta + review version. Stop: crowd, road, O&M or heritage owner missing.
All three are provisional review anchors, not official redlines or implementation commitments. The ordinary route remains open.

Image evidence: self-generated/derived display graphic; see sources.json, copyright-ledger.json and metrics/evidence assets for provenance and boundaries.

05 · Land-use structure and three-level scope



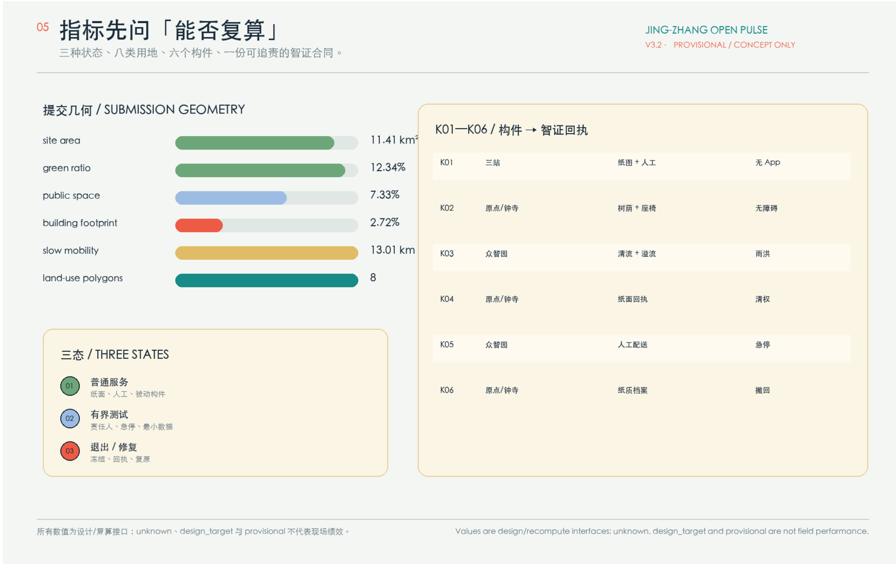
English translation of figure text

The source graphic is preserved above; this panel translates its detected text.

02 / Complete land-use allocation | the spine is not leftover space
An auditable eight-class land-use table turns the public spine into a spatial interface.
Research land 23.4%; public green 12.0%; protective green 10.7%; commercial services 13.1%; education 8.4%; square 8.0%; community facilities 14.7%; roads 9.7%.
Spatial translation: 01 public spine = continuous walking, wind and rainfall edges; 02 three nodes = validation, transfer and city experience; 03 four interfaces = ordinary route, e-stop, maintenance and receipt.
Eight polygons cover the provisional site; codes follow the current land-use enumeration, not statutory controls. Recompute after official polygons arrive.

Image evidence: self-generated/derived display graphic; see sources.json, copyright-ledger.json and metrics/evidence assets for provenance and boundaries.

06 · Metrics, evidence and review gates



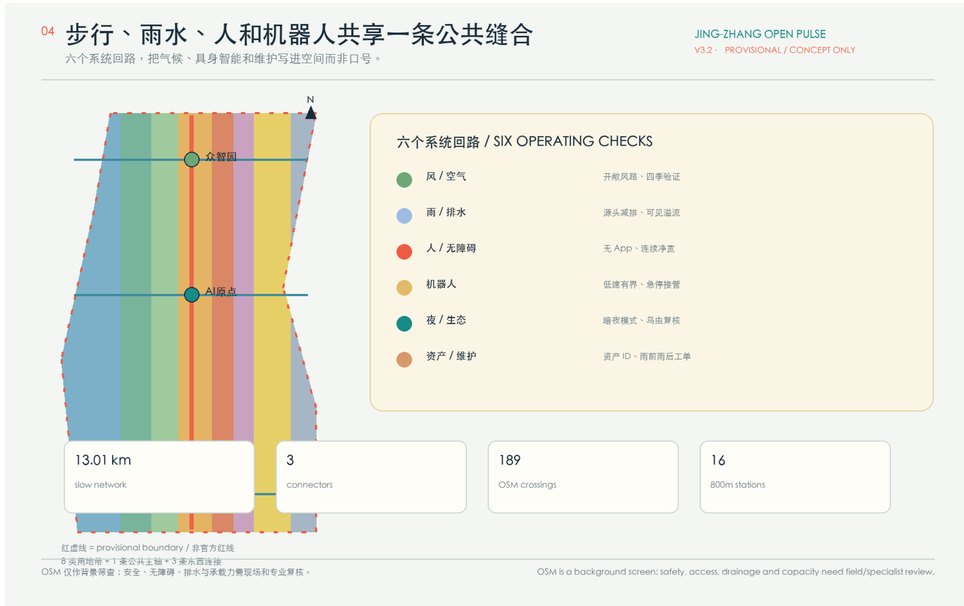
English translation of figure text

The source graphic is preserved above; this panel translates its detected text.

05 / Metrics first: can it be recomputed?
Three states, eight land uses, six components, one auditable evidence contract.
Submission geometry: site area 11.41 km²; green ratio 12.34%; public space 7.33%; building footprint 2.72%; slow mobility 13.01 km; land-use polygons 8.
K01–K06 / component → evidence receipt: K01 three stations → paper map + human → no app; K02 AI Origin / Dazhongsi → tree pit + seat → step-free; K03 Zhongzhiyuan → clear flow + backflow → rain; K04 AI Origin / Dazhongsi → paper receipt → Qinghe; K05 Zhongzhiyuan → human dispatch → e-stop; K06 AI Origin / Dazhongsi → paper archive → withdrawal.
Three states: ordinary service = paper, human, passive; bounded test = responsible person, e-stop, minimal data; exit / restore = freeze, receipt, restoration.
All values are design and recompute interfaces; unknown, design_target and provisional do not represent field performance.

Image evidence: self-generated/derived display graphic; see sources.json, copyright-ledger.json and metrics/evidence assets for provenance and boundaries.

07 · Mobility, blue-green network and drainage



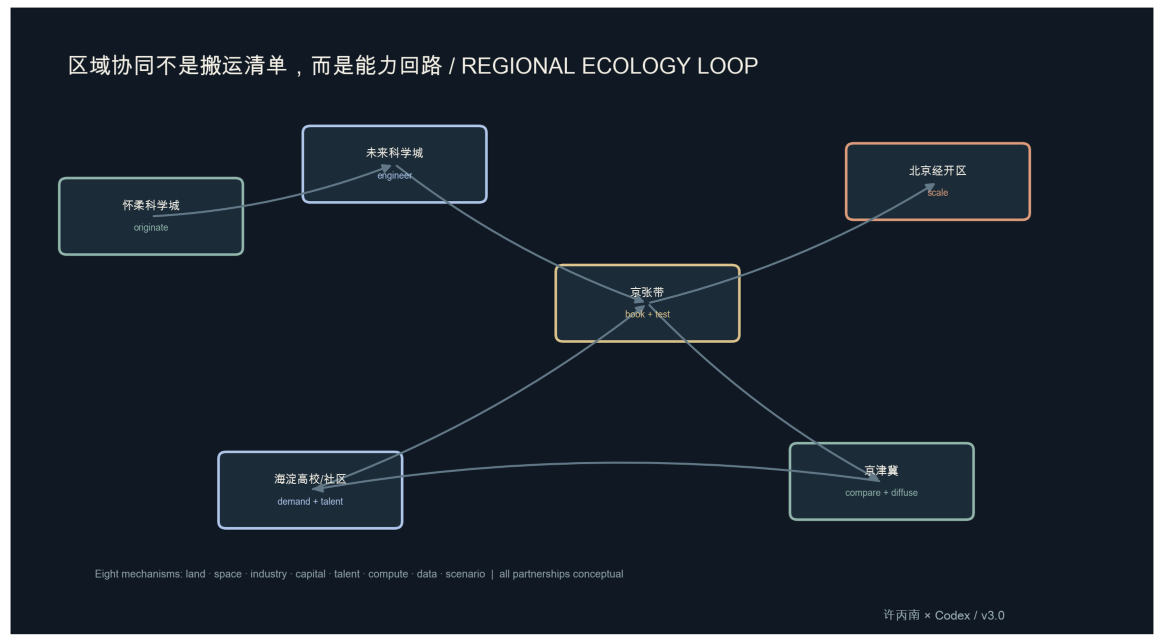
English translation of figure text

The source graphic is preserved above; this panel translates its detected text.

04 / Walking, rainwater, people and robots share one public seam
Six system loops integrate climate, embodied intelligence and maintenance into space rather than slogans.
Wind / air — open wind corridor, seasonal verification. Rain / drainage — source reduction, visible overflow. Human / accessibility — no app, continuous accessibility. Robot — low-speed boundary, e-stop takeover. Night / ecology — dark mode, habitat review. Asset / maintenance — asset ID, rain-before/after work order.
13.01 km slow network · 3 connectors · 189 OSM crossings · 16 stations within 800 m.
OSM is a background screen; safety, access, drainage and capacity need field and specialist review. The boundary is provisional.

Image evidence: self-generated/derived display graphic; see sources.json, copyright-ledger.json and metrics/evidence assets for provenance and boundaries.

08 · Regional ecosystem and innovation loop



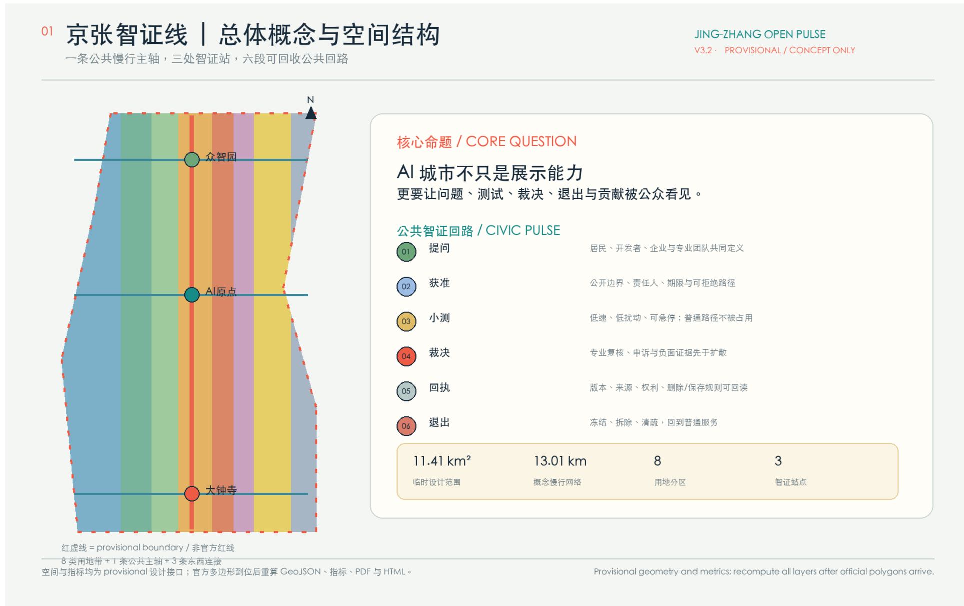
English translation of figure text

The source graphic is preserved above; this panel translates its detected text.

Regional coordination is a capability loop, not a transfer list.
Huairou Science City → originate. Future Science City → engineer. Jing-Zhang belt → book + test. Beijing E-Town → scale. Haidian university / community → demand + talent. Beijing–Tianjin–Hebei → compare + diffuse.
Eight mechanisms: land · space · industry · capital · talent · compute · data · scenario. All partnerships are conceptual and require separate ownership, funding, safety, rights and implementation review.

Image evidence: self-generated/derived display graphic; see sources.json, copyright-ledger.json and metrics/evidence assets for provenance and boundaries.

09 · Site overview and spatial framework



English translation of figure text

The source graphic is preserved above; this panel translates its detected text.

01 / Jing-Zhang Open Pulse | overall concept and spatial structure
One public slow-mobility spine, three proof stations and seven reversible public loops.
Core question: an AI city should make questions, tests, decisions, exits and public contribution visible.
Civic pulse: Question · Permission · Bounded test · Decision · Receipt · Retire.
Working site area 11.41 km² · slow network 13.01 km · land-use polygons 8 · proof stations 3.
Provisional geometry and metrics; recompute all layers after official polygons arrive. Drawing set v3.2; v3.3 adds the machine-readable spatial-object refinement.

Image evidence: self-generated/derived display graphic; see sources.json, copyright-ledger.json and metrics/evidence assets for provenance and boundaries.

10 · Quantitative sustainability time series

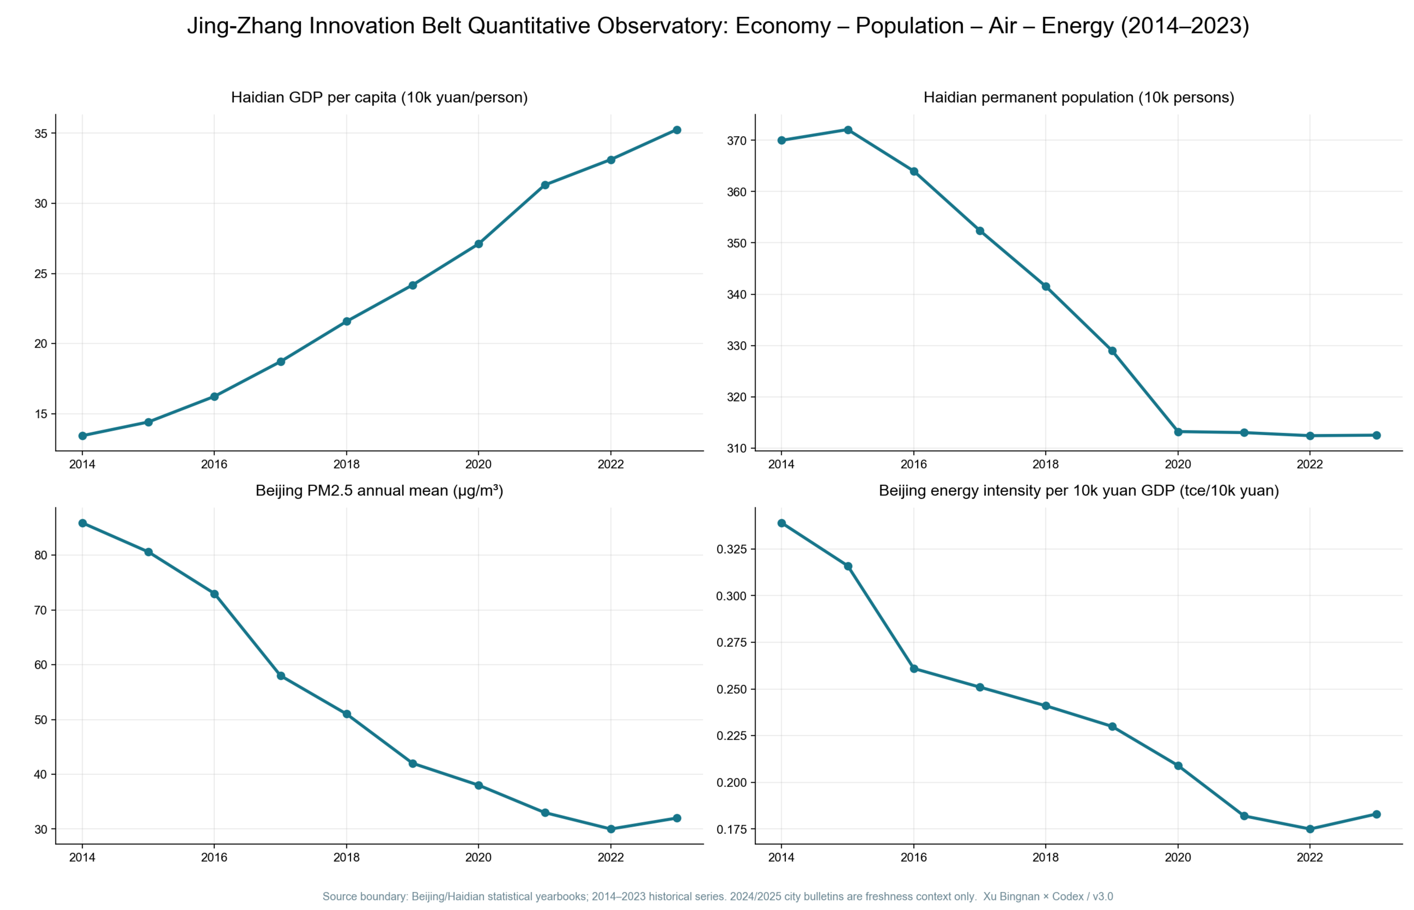


Image evidence: self-generated/derived display graphic; see sources.json, copyright-ledger.json and metrics/evidence assets for provenance and boundaries.
