

CMP.JZ Compute-Energy Loop

AI compute infrastructure & compute-energy synergy ring along the Jing-Zhang AI Innovation Belt

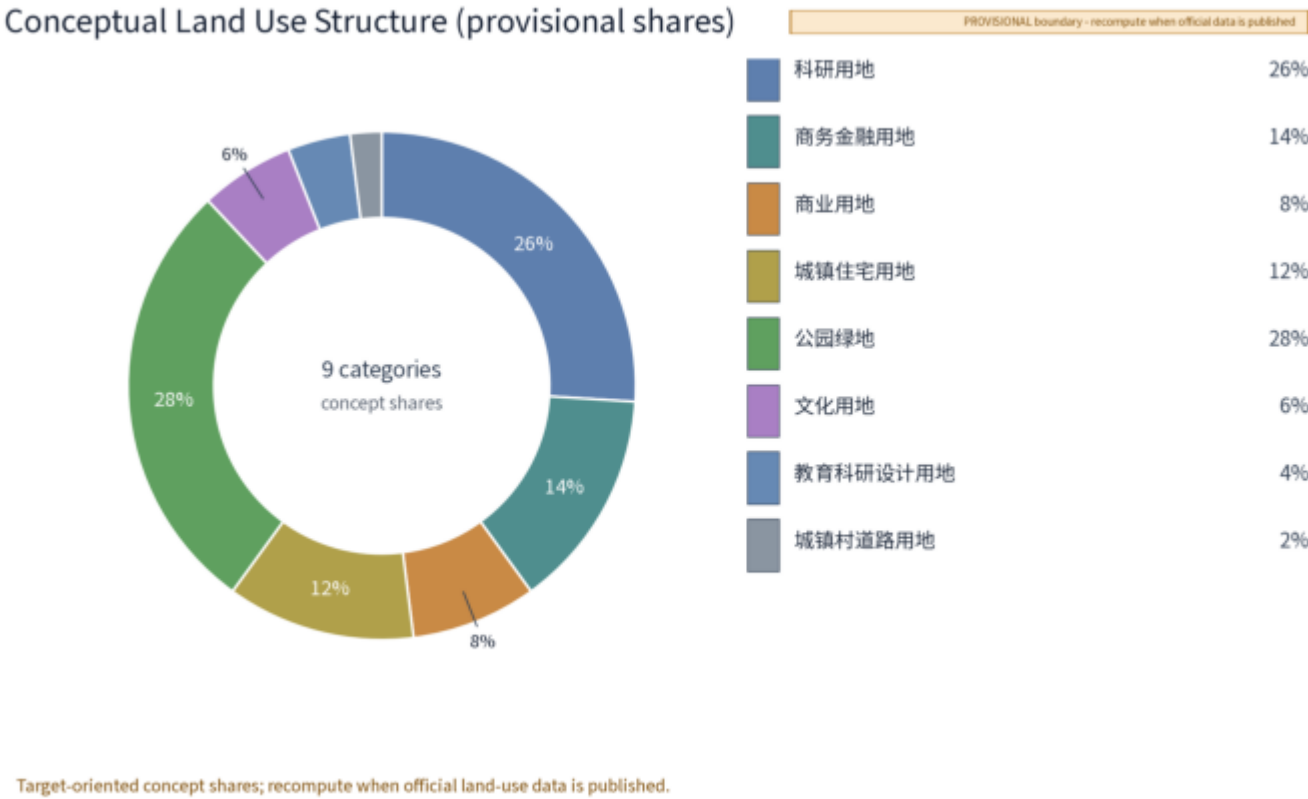

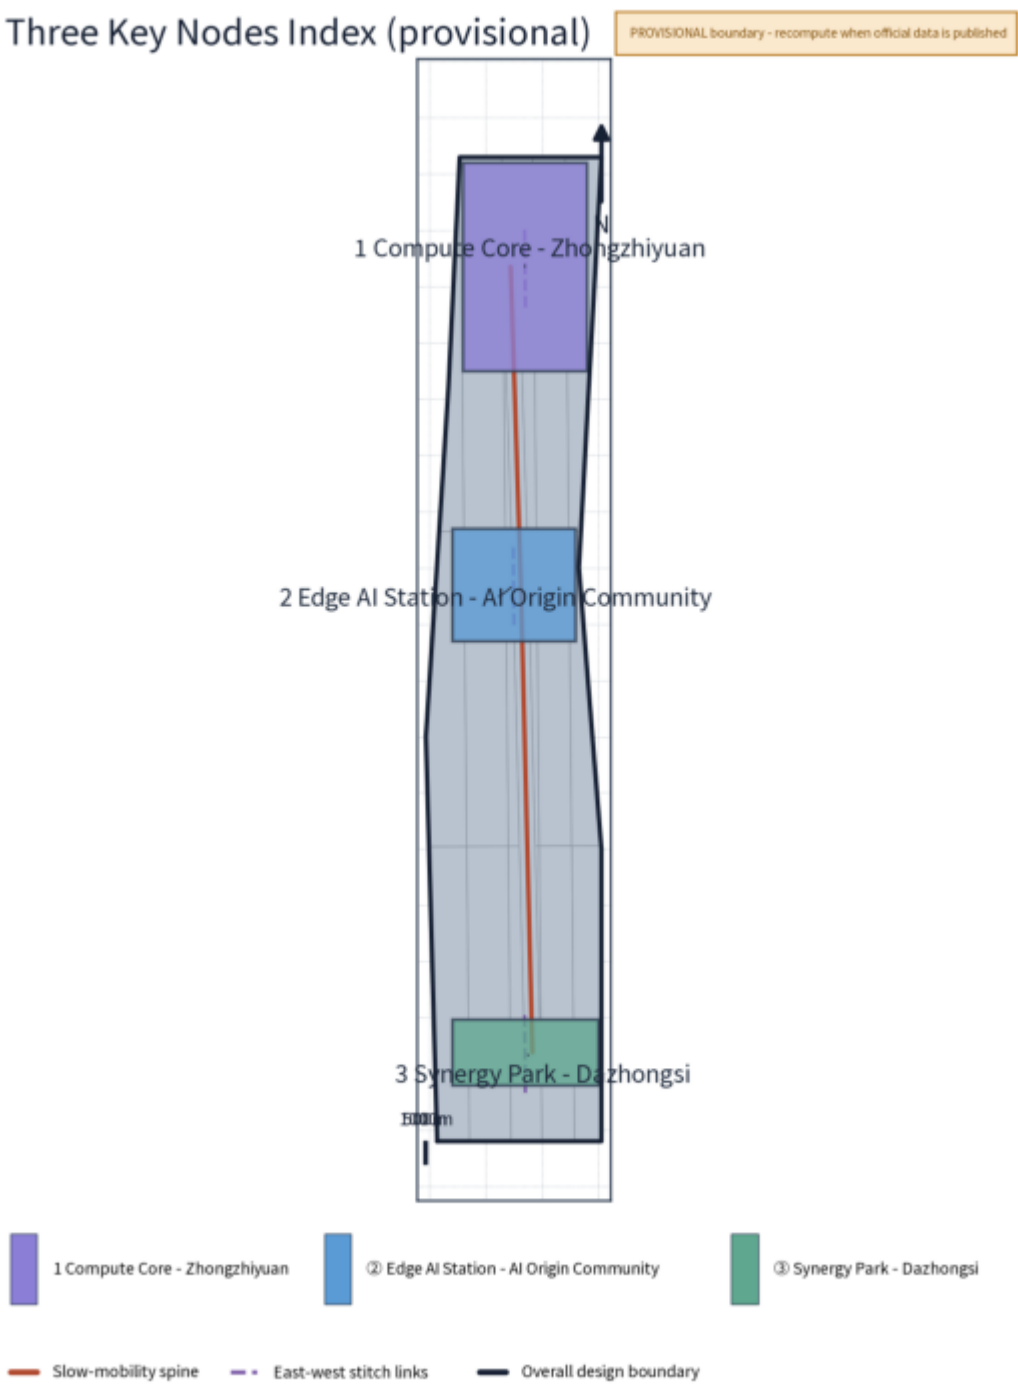

Concept booklet / proposal only: provisional boundary, not an official redline; all figures are low-precision concept values; recompute when official data is published.

Overall Design Scope Overview (provisional geometry)

CMP.JZ Compute-Energy Loop

Concept booklet / proposal only: provisional boundary, not an official redline; all figures are low-precision concept values; recompute when official data is published.

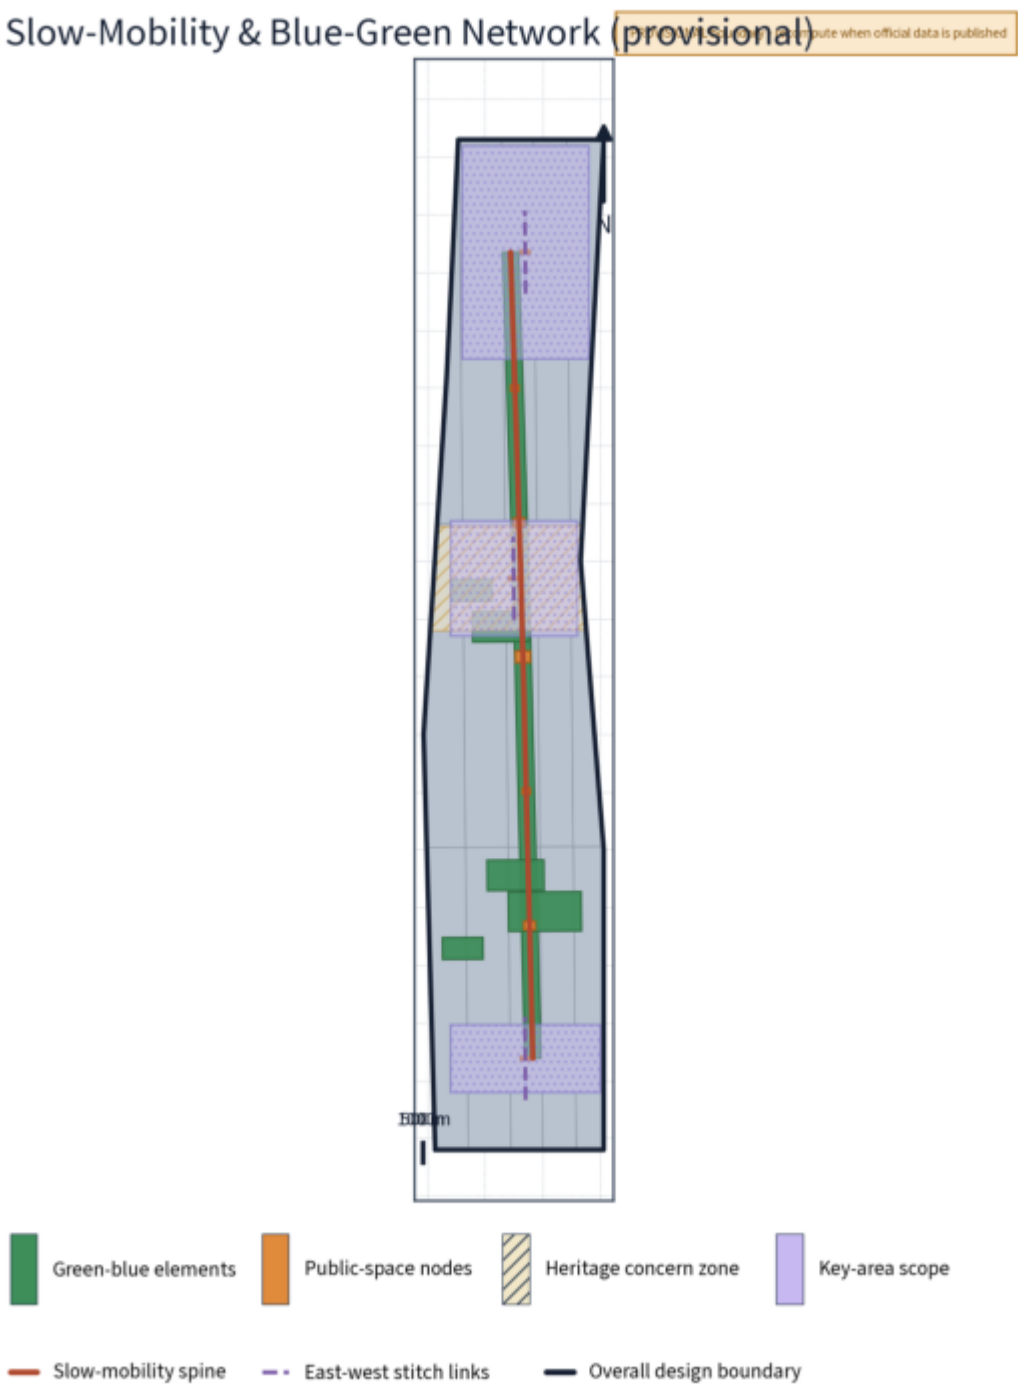

Three Key Nodes Index (provisional)

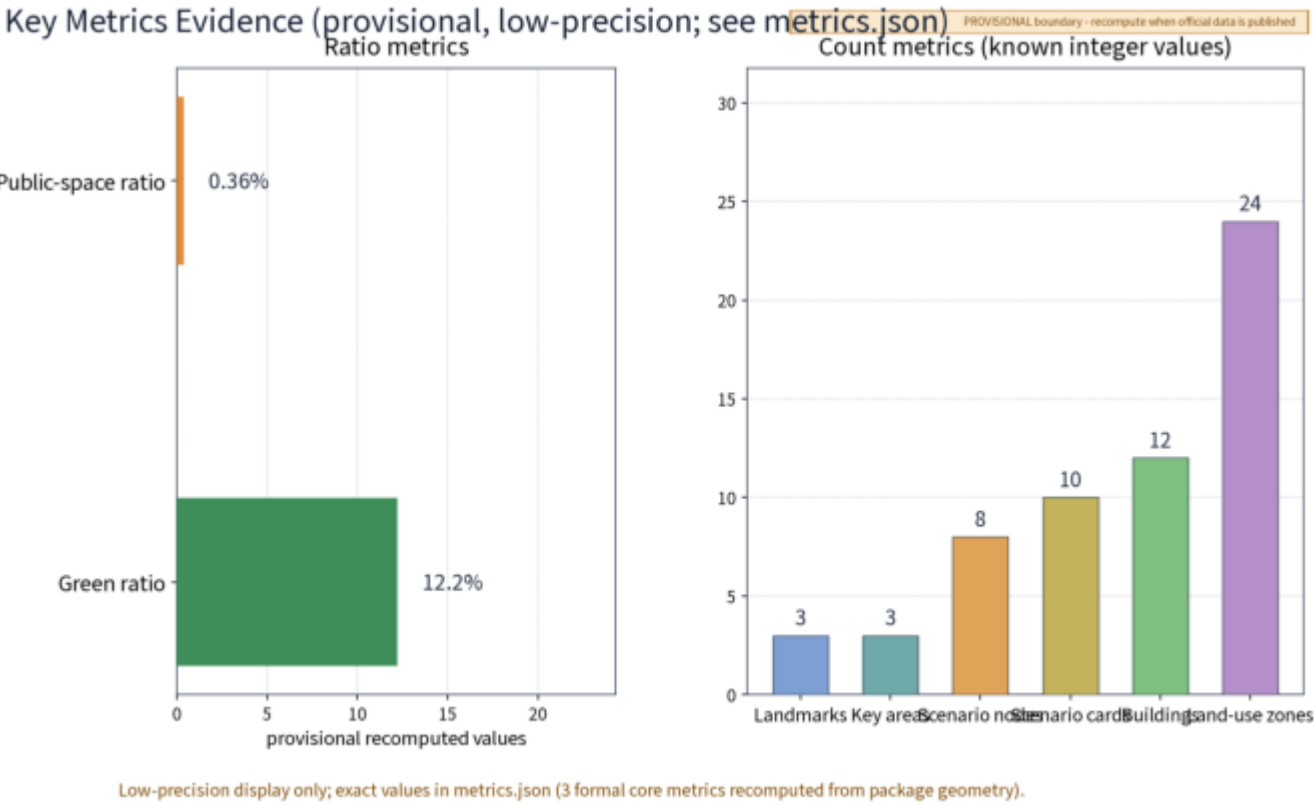

Conceptual Land Use Structure (provisional shares)

CMP.JZ Compute-Energy Loop

Concept booklet / proposal only: provisional boundary, not an official redline; all figures are low-precision concept values; recompute when official data is published.

Slow-Mobility & Blue-Green Network (provisional)

Key Metrics Evidence (provisional, low precision)

CMP.JZ Compute-Energy Loop

Concept booklet / proposal only: provisional boundary, not an official redline; all figures are low-precision concept values; recompute when official data is published.

1. Three-node ring: Compute Core (Zhongzhiyuan) - Edge AI Station (AI Origin Community) - Synergy Park (Dazhongsi)
2. Five AI+ scenarios: compute scheduling, energy optimization, capacity matching, data sandbox, carbon tracking
3. Data boundaries: anonymized aggregation only; human review of key decisions; no individual-identifying tracking
4. Phasing: pilot (1-3 yr) - three nodes & synergy mechanisms (3-5 yr) - full service ecosystem (5-10 yr)
5. Benchmarks: LUMI, Fugaku, Stockholm waste-heat district heating, Iceland data centers (public info only)
6. All content is a concept proposal; recompute when official data (boundary, regulatory plan, grid, heating) is published.
