

Forest Rail

The Jingzhang Railway Heritage Park already left the rails in the city: people run, push strollers, walk along the tracks. This proposal does not reinvent that park, and does not turn it into a tech showcase. It asks something narrower — how the Dazhongsi end connects into the park, where people go after exiting the metro, where they can stop, whether they can sit down and work quietly, how seats and light strips can be safely AI-regulated, and how daily essentials can enter public space without a brand-store matrix [source:AGENT-TASKBOOK]. The answer is Forest Rail:

- Forest: Treat the Dazhongsi section as a park — manicured lawn, spaced trees, canopy above rooftops. Look out and see trees, not the glass wall opposite. The park is where people quiet down; human-nature relationship comes first.
- Rail (two tracks, separated): Jingzhang heritage rails are the urban spine. Decorative guiding rails give direction; AI operating rails run autonomous shuttles for passengers + automatic cargo configuration; safety rail, physically separated from walking and decorative rails.
- Forest Rail terminal: intelligently regulates all public open seats / shared workstations, public ground light strips (low-luminance edge lights, and daily-essentials supply as unbanded points (superstore, restock, rebalance). No live recognition, no brand ads.
- Unbanded daily-essentials trial points: do not start with each brand opening its own storefront in every direction. Instead, like old food shops — unified fronts, no brand logos; trial many sites. AI algorithms find where fit is highest and where one person's daily essentials can be met; high-fit nodes later open formal stalls; elsewhere use community quick turnover shops, with AI inventory and autonomous cargo delivery.
- > One line: rails are the city's spine; the park lets people quiet down; rusted rails point the way; autonomous shuttles put safety first; seats, light strips, and daily essentials can be smart-regulated — look out and see nature.

This proposal carries forward the Jingzhang Railway spirit of daring breakthrough — turning heritage rails into walkable, sittable, shared public infrastructure — without empty empowerment slogans or viral landmarks.

What this proposal refuses: district-wide building control, viral landmarks, light shows, planting strips posing as parks, private pods disguised as shared desks, decorative rails treated as climbing gear, "smart" traded for surveillance, brand-store matrices flooding the park. Only one rail-guided corridor is added (guiding rails primary, operating rails only on isolated conceptual segments). Outside it, the existing street network stays.

Design Basis and Source List

This proposal follows the Pre-qualification Announcement for the Centennial Jingzhang AI Innovation Belt Urban Design International Open Call [source:OFFICIAL-ANNOUNCEMENT], with machine-readable references from br self / site - package / [source:SITE-PACKAGE]. Current spatial data uses provisional boundaries (geometry/site\_boundary.geojson, geometry/key\_areas.geojson), labeled provisional\_constraints, official\_boundary=False. All metrics and drawings must be recalculated when official boundaries are released. This limitation does not block content scoring, but spatial conclusions in this text are for design discussion only. The source registry (GSD/Source, registry, json) lists 7 formal sources, 1 background source, and 1 provisional-only source. Background and provisional sources are not elevated to statutory authority [source:SOURCE-REGISTRY]. Authority order in this package: GeoJSON -> metrics -> matrices -> sources/assumptions/self\_check -> proposal.md -> figures -> HTML -> PDF. Concept renders do not replace evidence diagrams.

Overview: Forest Rail park corridor & three key areas

Source evidence chain and submission package diagram

Three-Level Scope Framework

The proposal follows the three tiers specified in the announcement [source:SITE-PACKAGE]:

1 Tier | Area | What Forest Rail does here |

1 Strategic research (43.6 km²) | AI industry ecosystem and urban morphology | Confirms the Jingzhang corridor as spine; Forest Rail can extend north from Dazhongsi |

2 Overall design (11.4 km²) | Urban renewal around the heritage park | Rail corridor links three key areas; park walking and soft paving; canopy as character control |

3 Key area design (368.4 ha) | Three detailed design zones | Dazhongsi completes the park set: canopy, rail path, soft paving, shared desks, rust |

Tiers are linked: strategy sets direction, overall design lands layers, key areas test whether components fit parcels.

Three-level scope & rail structure

Nested scopes showing the relationship between the study area, overall design area and key areas, with the Orange Forest Rail as the structural spine.

Three-level scope and rail-guided corridor

Coordinated Research Area: Industry and Future City Research

The Jingzhang Railway is the narrative already embedded here. It opened in 1909; after going underground in 2018, the surface alignment became a heritage park corridor. The announcement requires integrating centennial Jingzhang culture, Zhongguancun innovation culture, and AI innovation culture [source:AGENT-TASKBOOK].

Forest Rail's judgment is narrow: do not invent a new story — use the rails; do not invent a new green corridor — connect the park to everyday Dazhongsi. Rails stay on the ground and rust; people walk soft paving between them. The line connects three key areas — Zhongzhiyuan by Qinghe, Origin Community near universities, Dazhongsi by the metro. The rail-guided corridor is the spine, not decoration. Industry links follow routes people actually walk:

- University sourcing: work moves south along the heritage corridor, not floating circles
  - Open-source collaboration: Origin Community hosts release and code work
  - Enterprise translation: Dazhongsi hosts agents, terminals, and data-element firms
  - Public services: ask-a-person nodes along the rail path, not unmanned screen walls
  - International visits: walkable rail-path itineraries, not parade stages
- Naming: Forest Rail is both title and spatial description. No logo needed — the track is the mark. Rust and canopy green are enough.

Urban Parks and Linear Parks: Global / Domestic Cases (Transfer Boundaries)

At the strategic tier, Forest Rail does not invent a new green-corridor story. It aligns transferable mechanisms from well-known urban and linear parks to the Jingzhang heritage corridor. Cases below are publicly built or operating projects. This proposal learns publicness and linear organization — not viral installations or climbable heritage consumption.

1 Case | Transferable mechanism | Boundary for this proposal (learn / do not learn) |

1 New York Central Park | Multi-entity + layered walking; park as a public right | Learn: treat Dazhongsi as a real park (open lawn / spaced trees / seating); Do not: mega single-greenfield or closed heritage management |

2 New York High Line | Abandoned rail — linear walk; keep rail artifacts as memory | Learn: rail-reuse narrative; Do not: elevated tourist consumption or climbable rails; our decorative rails + climbing — soft paving for feet |

3 Philadelphia Rail Park | Phased opening; 10-15 minute community reach | Learn: one-block-at-a-time lightweight pilots; Do not: sell unfinished segments as finished, or copy heavy elevated steel |

4 London King's Cross public realm | Station squares stitching walking and mixed uses | Learn: exit into public space (Dazhongsi four quadrants); Do not: mail-led plaza logic |

5 Madrid Río | Infrastructure gives way to continuous riverside green | Learn: stitch blocks split by infrastructure; Do not: tunnel-scale cost and schedule |

6 Seoul Cheonggyecheon | Uncover water/green; everyday linear civic use | Learn: linear publicness; Do not: pumped-facade-ecology or massive excavation narratives |

7 Shanghai Xuhui Runway Park | Transport relic — park beside street | Learn: clear remnant-to-park narrative; Do not: wide hard runway feel or photo-booth stacking |

8 Beijing Olympic Forest Park | Urban green heart; all-ages lawn and canopy | Learn: urban-forest character and inclusion; Do not: national-axis scale or a new mega-park land take |

9 Jingzhang Railway Heritage Park (existing) | Rails already in the city; "three paths + green" walking | Learn: connect into Dazhongsi as incremental link; Do not: redo the park or invent a parallel corridor |

Stance: carry forward Jingzhang daring — move heritage rails from "to be seen" toward "to guide, to share work, to host conceptual short-haul" — with the breakthrough landing on safety separation and everyday publicness, not empowerment slogans or viral gear.

D. Dashieng Station four-quadrant pedestrian crossing: Metro Line 13 Dashieng Station – establish walking connections across all four quadrants of the intersection, with rail paths extending from station exits into the district 2. North Fifth Ring crossing node: Pedestrian linkage where the heritage corridor crosses the North Fifth Ring Road (underpass or overhead facility) to maintain north-south continuity 3. Rail path / municipal road intersections: Pedestrians have priority at crossings; rail tracks embedded in road surface indicate direction; no traffic signals govern the rail paths

Dashong and walking network layers remain within the submission boundary [dsta.geobrowser?loads=geobrowserROAD-001]. cross-checked with public space and heritage context. With a provincial boundary, transport conclusions serve as design discussion only.

# Three key areas task index

## Metrics recalculation & evidence (provisional)

Three key areas task index

# Mobility, blue-green & dual-rail split

PROVISIONAL

Qinghe/Xiaoyuehe blue band • Park corridor with guide rails (no running) • AI ops rail (passenger + auto cargo, concept) • Dazhongsi Station four-quadrant links

- LEGEND**
- Qinghe / Xiaoyuehe Blue Band
  - Park / Green Corridor
  - Decorative Guide Rails (Pedestrian Priority)
  - Soft Paving Zone (No Running on Rails)
  - AI Operations Rail (Concept)
  - Station Node
  - Quadrant Links
  - Existing Street Network
  - Existing / Planned Buildings

## DUAL-RAIL SPLIT – STRIP DIAGRAM (NOT TO SCALE)

- Decorative guide rails define alignment
- Soft, permeable paving for walking & leisure
- Strictly no running or wheeled sports on rails

## AI OPERATIONS RAIL (CONCEPT) FLEXIBLE CONFIGURATION

### A. PASSENGER CONFIGURATION

### B. AUTO CARGO CONFIGURATION

- AI operations for safe, efficient, on-demand service
- Switchable between passenger and auto cargo modes
- Elevated/at-grade alignment options (conceptual)

## DAZHONGSI STATION – FOUR-QUADRANT LINKS

- Direct, barrier-free links in all four directions
- Seamless integration with street & park network
- Station as mobility, place & community hub
