

E1 Two Lines, Three Cores, Four Gates

A traceable evidence line and a public-service line meet at three proposed, reversible innovation nodes.

CONCEPT DIAGRAM / NOT A SURVEY, BASE MAP, REDLINE OR ENGINEERING DRAWING

FOUR CONCEPT GATES

Evidence checks source and formula. Consent checks voluntary participation, accessibility and offline alternatives. Safety checks minimum data, human takeover and pause. Public value checks fairness, appeal and review.

IDENTITY V2

Parallel gold and teal lines distinguish verifiable evidence from public life. The crossings are contribution points that can be explained, corrected and withdrawn, not promised landmarks.

FIVE PROPOSED INTERFACES

Beiwei Community: user feedback; Future Science City: research questions; Huairou Science City: science storytelling; E-Town: device and manufacturing validation; Jing-Jin-Ji: open-source activity and standards exchange.

BOUNDARY OF THE CLAIM

All interfaces are concepts awaiting confirmation. They do not establish partners, budgets, data transfer, activity calendars, land rights or implementation commitments.

E2 Eight-Factor Innovation Ecology

Land and space, industry, finance interfaces, talent, compute, data, scenarios and community are reviewed as one public-value system.

CONCEPT DIAGRAM / NOT A SURVEY, BASE MAP, REDLINE OR ENGINEERING DRAWING

OPERATING RULE

An idea moves from an open problem through source and condition review, a small reversible test, public review and a reusable knowledge record. Missing evidence stops the proposal at research stage; it does not become a promise of construction, service, data exchange or partnership.

AUDITABLE CYCLE

Open a question, verify spatial capacity, disclose minimum data, pass the four gates, run a limited trial, publish a review and retain only reusable knowledge.

CASE TRANSLATION

Kendall Square, Cambridge, one-north, Helsinki and Barcelona are text-only mechanism references. No map, statistic, brand, image or copied spatial scheme is used.

THREE-CORE DIVISION

The three cores respectively test, build consensus and communicate results. The two wings provide candidate service and low-impact public-experience interfaces.

COLLABORATION STATUS

Regional interfaces are proposals, not confirmed cooperation. Each requires role, source grade, permits, security review, exit condition and archival responsibility before release.

E3 Three Key-Area Overlay Templates

Each provisional area combines space type, walking/public-space interface, AI scenario, phase and prerequisite with a persistent provisional label.

CONCEPT DIAGRAM / NOT A SURVEY, BASE MAP, REDLINE OR ENGINEERING DRAWING

OVERLAY CONTENT

Every template carries a conceptual space type, walking and public-space relation, first scenario, candidate phase, dependency and feature ID. It is not an existing-condition survey.

PRIORITY SCENARIOS

SG-02 trusted evaluation, SG-01 voluntary contribution publication and SG-05 public-service review are small, reversible candidates, never default deployments.

MOBILITY + PUBLIC SPACE

Walking continuity, accessible edges, paper guidance and low-impact connectors take priority. Station, road, parking and utility conditions remain pending professional verification.

NO STATUTORY CLAIM

The three templates do not fix parcel lines, building massing, land-use controls, construction locations, ownership or approvals.

E4 Ten Scenario Governance Cards

Every scenario declares minimum data, a human alternative, measurable result, stop condition, appeal, deletion and restoration evidence.

京张智脉 2.0 / KNOWLEDGE WEAVE

CONCEPT DIAGRAM / NOT A SURVEY, BASE MAP, REDLINE OR ENGINEERING DRAWING

DATA MINIMIZATION

No unnecessary identifiable trajectory is collected. Profiles do not drive commercial recommendations. Sensitive or consequential decisions remain with qualified people.

HUMAN FALLBACK

Every card names a paper, staffed or inspection alternative. A model output never replaces the person responsible for service, safety, correction or escalation.

STOP + APPEAL

Bias, unsafe performance, incorrect route, repeated complaint, rights request or deletion request stops the relevant use. Re-entry needs review, a public record and renewed consent.

MEASUREMENT

Candidate indicators include reproducibility, correction time, accessible-route coverage, human-review rate, appeal response and deletion completion. Baselines are set before a limited test.

E5 Implementation, Rights and Full Recalculation

Phasing is a candidate sequence with gates, not a committed schedule; every geometry-derived number remains provisional intake only.

CONCEPT DIAGRAM / NOT A SURVEY, BASE MAP, REDLINE OR ENGINEERING DRAWING

OPERATING RULE

An idea moves from an open problem through source and condition review, a small reversible test, public review and a reusable knowledge record. Missing evidence stops the proposal at research stage; it does not become a promise of construction, service, data exchange or partnership.

INTAKE METRICS

Displayed values are approximate and low confidence: site area 11.4 km², green ratio 12%, public-space ratio 7%. They are reproducible from submitted geometry, not official controls.

ASSET-LEVEL RIGHTS LEDGER

The ledger records authored narrative, diagrams, HTML, PDF, Noto Sans SC raster labels, Pillow, text-only case references and provisional geometry. It excludes base maps, aerials, photos, marks, icons, remote resources and tracking.

OFFICIAL-GEOMETRY MIGRATION

Replace site and key-area polygons; regenerate all derived layers; recompute with EPSG:4548; redraw figures, HTML and PDFs; publish a difference table; rerun four local gates. A single-file boundary swap is invalid.

OPERATING ACCOUNTABILITY

Each project card needs candidate roles, permits, resource range, maintenance, KPI baseline, human review, appeal, pause, deletion and restoration before a test progresses.
