

PROVISIONAL CONCEPT BOUNDARY • NOT AN OFFICIAL REDLINE • RECOMPUTE ON OFFICIAL DATA

LAST • JZ: Low-Speed Autonomous Delivery and Last-Mile Logistics Network (Concept)

Centennial Jingzhang AI Innovation Belt • Last-mile logistics special study • Jingzhang Heritage Park green corridor • three-node concept network

Three scopes (announcement text)

Coordinated research area: ~43.6 sq km, north to North 5th Ring Rd, east to Jingzang Expressway, south to Xizhimen Outer St, west to Zhongzhiyuan Rd

Overall design area: ~11.4 sq km, north to North 5th Ring Rd, east to Xueyuan Rd and Xitucheng Rd, south to Xizhimen Outer St, west to Zhongzhiyuan Rd

Key detailed-design areas: ~368.4 ha, north to south: Zhongzhiyuan AI Acceleration Zone (~192.1 ha), Beijing AI Origin Community (~176.3 ha)

This package: a last-mile logistics special study within the overall design area and key areas; all geometry is provisional and recomputed

Overall structure: one hub, two stations, one point

Consolidated hub (Zhongzhiyuan side): district co-delivery and sorting, multi-brand access, time-shifted loading; AI landmark LM-01 "Strong AI Origin"

Delivery micro-station (AI Origin Community side): parking, charging, interchange and dispatch; AI landmark LM-02 "Low-Speed Demonstration Station"

Smart parcel-and-service station (Dazhongsi side): community pickup and convenience services, daytime manned + nighttime self-service

Low-speed delivery concept loop: no new road redlines, only speed-limited time-shared route-rights intent, coordinated with the green corridor

AI+ scenarios (ten cards)

S01 Dispatch AI • S02 Route-rights AI • S03 Access AI • S04 Capacity-matching AI • S05 Safety-monitoring AI

S06 Energy-ops AI • S07 Misplacement & complaint AI • S08 Accessibility AI • S09 Community co-delivery AI • S10 Annual evaluation & disclosure AI

Governance in three sentences: anonymized aggregation only • human review of key decisions • no over-monitoring, 10 scenario nodes (3 AI landmarks + 7 scenario nodes).

Three industry validation scenarios: pilot route-rights safety, station access & misplacement, rider-robot collaboration (qualitative acceptance baselines).

Mechanisms and implementation (concept)

Mechanisms: co-delivery access & time-shared route rights, terminal facility siting guideline, delivery service points, rider-robot collaboration rules (with human backup), annual safety review & disclosure

Phasing: near term 1-3 years pilot micro-station and station (around Dazhongsi station, Origin-Community slow segment); mid term 3-5 years hub takes shape, route rights extend; long term 5-10 years full network

Actors: government (approval), enterprises (operation), universities (research), residents/communities (oversight), professional teams (delivery), volunteers (service), merchants (co-delivery and service)

Governance, fairness and compliance

Data governance: dispatch/access events anonymized aggregates; safety events anonymized + human characterization; complaints de-identified; rider labor group statistics only; retention and deletion rules in the body tables.

Rider fairness: matching rules public and filed with quarterly disclosure, advisory order caps, rider-council appeal channel (7-working-day response, escalation to the evaluation committee), portable points and honors.

AI governance: anonymized aggregation only, human review of key decisions, no over-monitoring; annual safety disclosure and residents assembly (on-site + online feedback); brand names are internal working codenames until a prior-rights search is completed.

Land use, metrics and evidence chain (concept caliber)

Single caliber • ratios and counts in separate panels • provisional recompute demo • evidence anchors

PROVISIONAL CONCEPT BOUNDARY • NOT AN OFFICIAL REDLINE • RECOMPUTE ON OFFICIAL DATA

Land-use structure (single caliber)

Green and open space: ~22% (two park-green classes merged)

Science and industry: ~29% (research land)

Commercial and business service: ~30% (business-finance + commercial)

Residential and supporting: ~9% (urban residential)

Roads and municipal: ~9% (urban-rural roads)

Formula: class area sum / site area (EPSG:4548); rounded display, ~99% total; full recompute on official data.

Three formal core metrics

site_area_sqm: area of site_boundary projected to EPSG:4548 (~1.14x10^7 m2, low-confidence temporary model value)

green_ratio: area(green_space) / site_area_sqm (~0.10)

public_space_ratio: area(public_space) / site_area_sqm (~0.006)

Values declared consistently with visual/index.html data-value attributes; ratios and counts in separate panels; provisional mark, s

Compliance matrix and evidence anchors

compliance_matrix.json maps all 23 taskbook requirements (announcement 1.3-1.5 and agent.1-6) item by item with evidence_summary_zh and report_sections.

standard_matrix.json covers 5 standards; design_depth_matrix.json covers 15 depth items; sources.json registers 16 sources (8 benchmark cases with publisher/link/date/license per item).

standard_matrix.json covers 5 standards; design_depth_matrix.json covers 15 depth items; sources.json registers 16 sources (8 benchmark cases with publisher/link/date/license per item).

Evidence anchors (body): [source:DATA-SRC-OFFICIAL-ANNOUNCEMENT], [source:DATA-SRC-AGENT-TASKBOOK], [source:DATA-SRC-PROVISIONAL-BOUNDARIES], [metric:site_area_sqm], etc.

Risks and honesty boundary

Principal risks: provisional boundaries misread as statutory redlines; route-rights pilot promoted as operational before approval; unclear liability boundaries; inadequate rider protections; monitoring crossing into individual tracking; benchmark cases misread as endorsements. Mitigations: every spatial expression carries "concept proposal / reference scheme" and provisional stamps; traffic impact assessment and statutory approval precede formal steps; safety monitoring is anonymized aggregation plus human review with no individual-identifying tracking; rider-robot collaboration is premised on public rules and human backup; no envisioned mechanism or policy is written as a settled decision.

Honesty line: all content is conceptual; no FAR, height, retain/renovate/demolish, fleet scale, delivery volume, investment or engineering conclusions; no fabricated official data; provisional boundary and recompute statements in the metrics section; resident feedback channels, annual disclosure and annual programs run routinely.
