

LAST • JZ (Concept)

PROVISIONAL CONCEPT BOUNDARY • NOT AN OFFICIAL REDLINE • RECOMPUTE ON OFFICIAL DATA

Low-speed autonomous delivery and last-mile logistics network • three scopes and three nodes • provisional

Three scopes and overall structure

Coordinated ~43.6 sq km; overall ~11.4 sq km (north North 5th Ring, east Xinghe Rd)

East/Qinghe Rd); key areas ~368.4 ha (Zhongzhivuan 192.1 / Origin Community)

One hub, two stations, one point: consolidated hub (Zhongzhivuan side (Dazhongsi side), connected along the green corridor by the low-speed corridor. The loop draws no new road redlines, it expresses speed-limited time-sharing

AI+ scenarios and governance

Ten scenario cards S01-S10

(dispatch/route-rights/access/matching/safety/energy/misplacement-congestion/evaluation), each with spatial anchor, anonymized data fields, model review of key decisions; no over-monitoring. 10 scenario nodes (3 AI landmarks + 7 scenario nodes), consistent with handling, acceptance indicators. metrics.scenario_node_count.

Key mechanisms and phasing (concept)

Mechanisms: Low-Speed Partner Compact (co-delivery access & time-shared route rights), terminal facility siting guideline (reversible lightweight components), delivery service points, rider-robot collaboration rules, annual safety review disclosure; annual programs: LAST-MILE Open Week, Phasing: near term 1-3 years pilots (around Dazhongsi station, Origin-Community slow segment); mid term 3-5 years hub matures; long term 5-10 years three-node network; five-stage gates with stop/reopen conditions in the body; any failure of safety, operation or public acceptance stops the item.

Metrics, evidence and compliance (conceptual)

PROVISIONAL CONCEPT BOUNDARY • NOT AN OFFICIAL REDLINE • RECOMPUTE ON OFFICIAL DATA

Three formal core metrics • single land-use caliber • data governance • risk boundary

Metrics and land-use caliber

The three formal core metrics are recomputed from this package geometrical attributes; low-confidence rounded display during the provisional period. Single land-use caliber (rounded): green/open 22% / science-industry 29% 9%; formula class area sum divided by site area; consistent across figures,

Data governance and rider fairness

Data governance by category: dispatch/access anonymized aggregated value (deleted at pilot end), safety events anonymized + human Rider fairness: matching rules public and filed with quarterly disclosure. Characterization (kept for annual disclosure), complaints de-identified, advisory order caps and rest reminders; rider-council appeal channel cases (deleted after closed loop), rider labor group statistics only with 7-working-day response, escalation to the evaluation committee; (published per rider-council agreement). portable points and honors, equipment-stop subsidy review.

Risk boundary and honesty declaration

All content is conceptual: no FAR, height, retain/renovate/demolish, road redlines, fleet scale, delivery volume, vehicle counts, investment or engineering conclusions; no fabricated official data; benchmark claims are registered item by item in sources.json; brand names are internal working codenames until a prior-rights search is completed.
