

Three Stations, Five Segments: One Public Loop

Turn seeing AI into an everyday path with choice, exit and review

Three Zones, Two Wings and the Co-Track Network

A research collaboration layer, not official boundaries, ownership or operations

Land Use and Renewal: Set Gates Before Spatial Action

Retain first · Low-impact renewal · Reversible test · Recalculate after formal controls

Mobility, Walking and Blue-Green Space: One Everyday Route

Rail arrival–heritage park–community–campus; AI remains explainable advice

???? / PUBLIC ROUTE

Fixed wayfinding + human service + accessible continuity

AI advice + conflict notice; never releases the route

Three Key Areas, Three Distinct Spatial Jobs

Validation, shared use and conversion need different spatial consequences

01

ZHONGZHIYUAN

VALIDATION

Evidence Yard

Enterprise-service interface

Controlled low-speed test

Boundary and operator pending

CONVERSION

First-Use Concourse

Public consumption

Feedback review

Boundary and operator pending

THREE ZONES · THREE STATIONS · FIVE SEGMENTS

Each key area names an entry, service node, human fallback and observation/feedback position

Observe/feedbackreview mailbox

STOP: do not release before route, role and access review

THREE STATIONS / FIVE SEGMENTS

Provisional boundary; anchors are conceptual interfaces pending field, ownership, accessibility and professional review

S01 First Release: The First Metre from Rail to Park

24 synthetic rule cases test the state machine, not field performance

HUMAN / OFFLINE PATH

Fixed wayfinding, paper route, phone or a human desk completes the same task independently.

STOP RED LINE

Blocked route, unverified service hours or failed human entry immediately pauses AI.

IMPLEMENTATION LOOP · FROM CONCEPT TO REVIEWABLE ACTION

Scene, space, accountable role, indicator and stop condition must travel together

ID	SCENE	SPACE	ROLE	INDICATOR	STOP CONDITION
S01	Rail-park first metre	Station gate / continuous wayfinding	Station service + access review	Human-path coverage / wait time unknown	Broken route or unverified night use → pause
S06	First AI product use	Reversible experience table	Product explainer + public guide	Four disclosures / feedback log	Capability or data boundary unclear → do not open
S07	Slow-robot public observation	Observation line / emergency stop	Safety observer + device owner	Stop, detour and incident log	Conflict, disconnect or stop failure → stop
AI advice → human review → spatial sync → anonymous receipt → correction / pause / exit					

Unknown indicators remain to be measured; this is a conceptual closure, not a field rehearsal or performance proof

CO-TRACK PROTOCOL

ONE SERVICE TRACK, TWO PARALLEL PATHS; PEOPLE CHOOSE AT KEY NODES

CO-TRACK

Shared entry, interface and minimum data base

CONTROL NODE

A visible equivalent human entry is always reachable

RETURN LOOP

A frozen stop threshold restores human service

VERSION STRATA

Release, review, pause and dignified exit remain public

Metrics and Evidence Chain: Make the Concept Reviewable

Separate design guarantees from unmeasured performance; trace every result

THREE-STAGE LOOP
