

京张新轨 The New Gauge

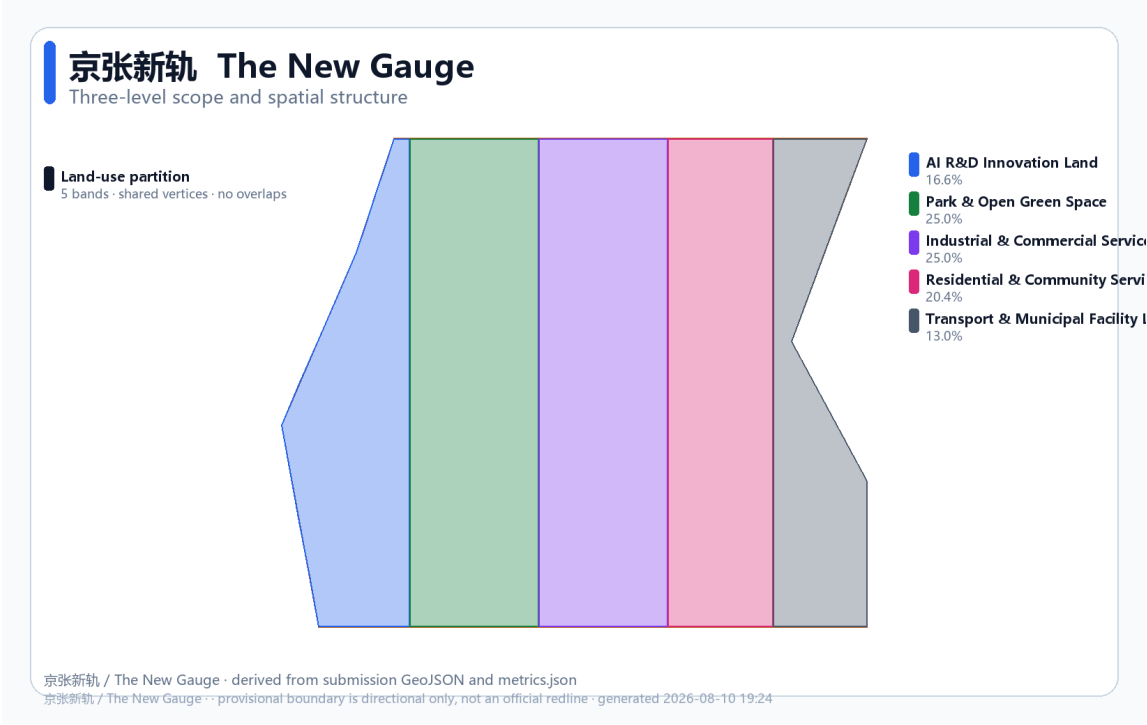

Setting a new gauge for AI-native cities · Centennial Jing-Zhang AI Innovation Belt

In 1909 Zhan Tianyou adopted the international standard gauge (1435mm) when building the Jing-Zhang Railway; this belt sets a 'new gauge' (new standard) for AI-native cities — letting data, compute, scenarios, talent, enterprise and governance interoperate under one shared standard. One axis + three gauges + two wings: Base Gauge (Zhongzhiyuan), Life Gauge (AI Origin Community), Industry Gauge (Dazhongsi) line the corridor.

Land-use structure and core metrics

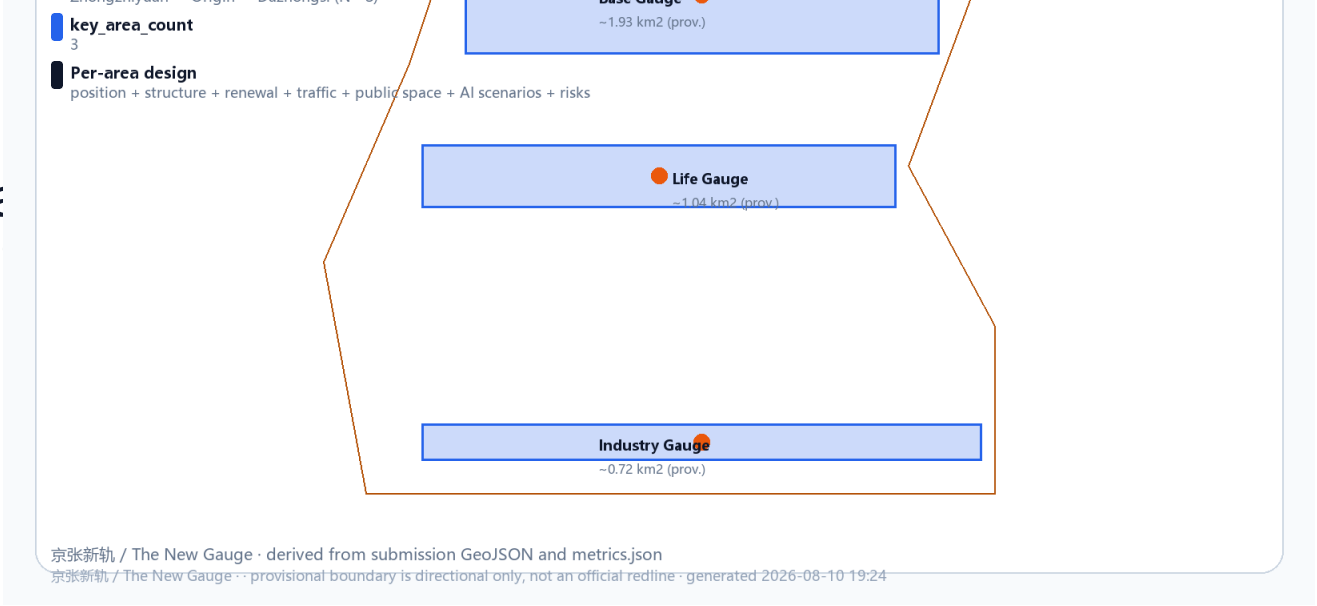

Five-gauge zoning · recomputed in EPSG:4548

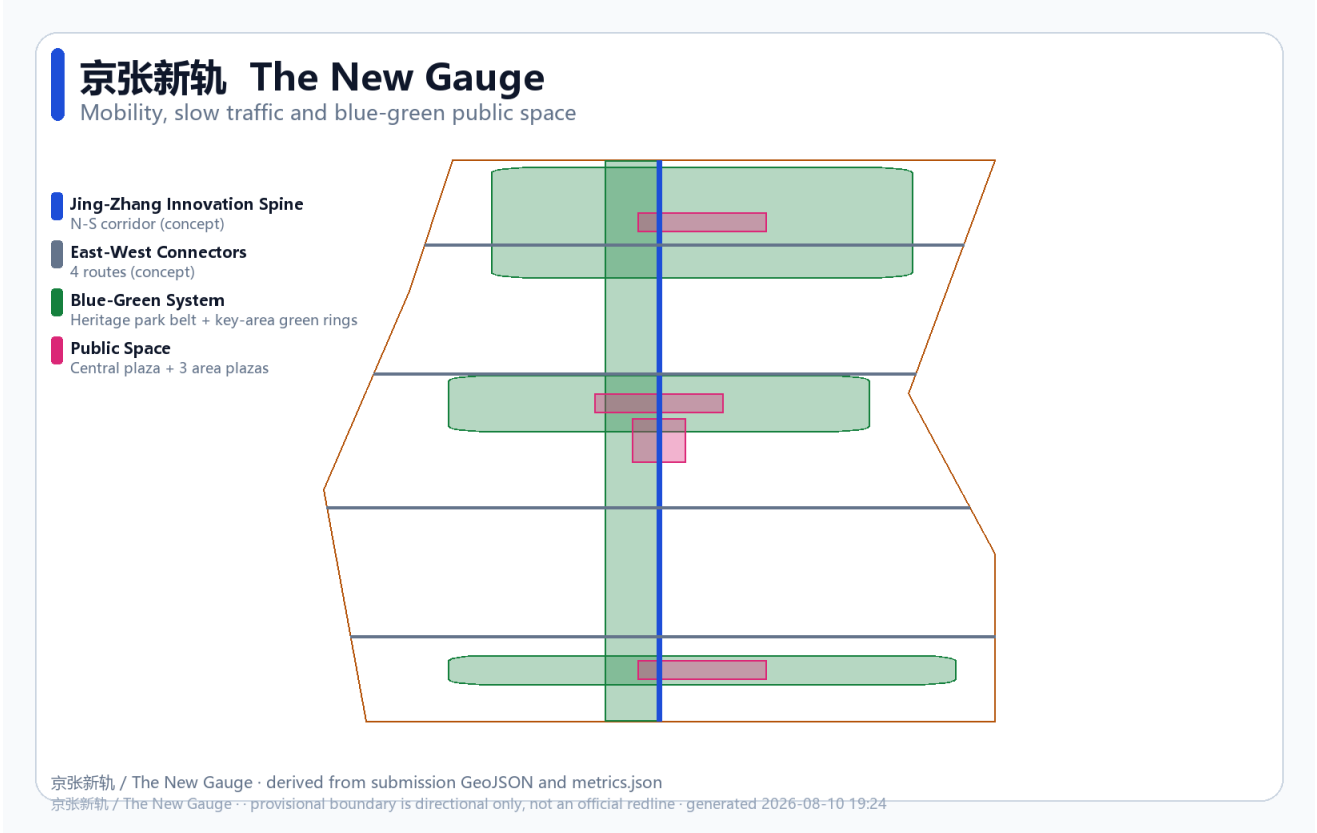

metric	value	status
site_area_sqm	11.41 km2	known
key_area_count	3	known
key_area_total_sqm	3.69 km2	known
green_ratio	23.1%	known
public_space_ratio	3.0%	known
building density (representative sample)	0.5%	known
road_centerline_length_m	14417 m	known
scenario_node_count	12	known
floor_area_ratio	—	unknown (no official control)

Key areas and gauges

Three gauges · three

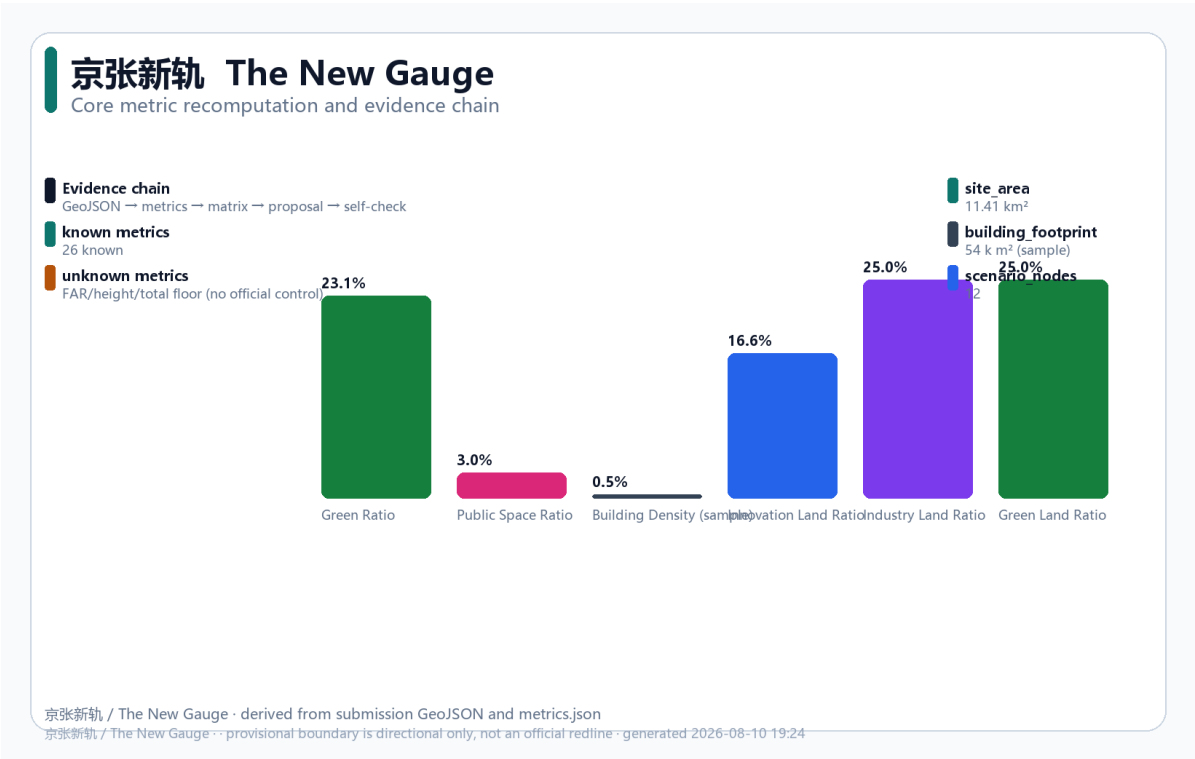

Base / Life / Industry Gauge

Spine linkage · blue-green public space

Evidence chain and AI scenarios

12 scenario cards · compliance coverage

Coverage

- compliance_matrix: 17 announcement items + 6 agent tasks = 23 items fully covered
- standard_matrix: 5 mandatory professional standards fully covered
- design_depth_matrix: 15 required depth items all complete
- All 6 agent tasks (naming/logo, cases, scenario cards, landmarks, narrative, operations) covered in proposal.md
