

Jing-Zhang Civic Loop

AI may exit; civic service may not

An AI innovation belt for everyday public service · v0.1.4

CONCEPT PROPOSAL · NOT OFFICIAL GEOMETRY, ENGINEERING OR AUTHORITY

Design judgement and evidence boundary

AI may exit; civic service may not

This iteration advances one flagship through space, operation, measurement and handoff: the Dazhongsi Reversible Civic Interface.

VERIFIABLE FACT	DESIGN RESPONSE	PENDING
Registered sources and recalculable package data.	Testable, stoppable, removable and handoff-ready concepts.	Official GIS, title, fire, accessibility, permits and owners.

4	11	4	7	5	3
review scales	stable components	operating states	permit dependencies	RACI workstreams	comparison modes

Three scopes and overall structure

An AI innovation belt for everyday public service · v0.1.4

JING-ZHANG CIVIC LOOP

Three scope levels on one spatial evidence map

Public urban fabric is context only; provisional extents stay dashed and the three nodes keep their relative positions

43.6 km² Coordinated research

Industry, culture, talent and regional networks

11.4 km² Overall design

Renewal, civic spine, mobility, blue-green and services

368.4 ha Three key areas

Controlled testing, near-campus collaboration and a civic industry interface

Concept proposal · provisional geometry · not a statutory plan or implementation approval

Context: © OpenStreetMap contributors · ODbL 1.0

Context © OpenStreetMap contributors, ODbL 1.0. Provisional extents never replace statutory boundaries.

JING-ZHANG CIVIC LOOP

Correct land-use classes before mixed civic services

Codes follow the national classification; programme mix is a design note, not statutory control

0802 Research land

AI R&D and open collaboration; parcel and control confirmation pending

1401 Park green space

Continuous walking, shade, rest and accessible service

09 Commercial and service land

Industry support is a programme note; code 05 (wetland) is no longer misused

0702 Community-service support

Staffed help, daily life and non-AI access

Concept proposal · provisional geometry · not a statutory plan or implementation approval

Context: © OpenStreetMap contributors · ODbL 1.0

Concept zones recalculate with official boundaries, parcels and statutory controls.

JING-ZHANG CIVIC LOOP

Repair continuous passage before adding withdrawable AI

Six walking audits are mapped; paper wayfinding and staffed help remain parallel

Concept proposal · provisional geometry · not a statutory plan or implementation approval

Context: © OpenStreetMap contributors · ODbL 1.0

Three differentiated key-area trials

An AI innovation belt for everyday public service · v0.1.4

JING-ZHANG CIVIC LOOP

Three key areas, three distinct operating contracts

Each area states the ordinary path, AI increment, entry gate and stop condition

Zhongzhiyuan · T2 controlled sandbox

Ordinary: staffed benchmark and offline equipment notes
AI: edge-model, energy and recovery comparison
Gate/stop: isolated plan and authority; stop on boundary breach or failed recovery

AI Origin Community · T1 civic service

Ordinary: paper signs, staffed desk and no-account access
AI: explainable guidance and service triage
Gate/stop: accessibility and privacy review; stop if any group is blocked

Dazhongsi · T3 rights-cleared display

Ordinary: staffed rights check and in-person explanation
AI: synthetic-data permission, withdrawal and audit demo
Gate/stop: item-level clearance; stop if withdrawal or audit fails

Concept proposal · provisional geometry · not a statutory plan or implementation approval

Context: © OpenStreetMap contributors · ODbL 1.0

Ordinary baseline, AI increment, entry gate and stop condition differ by node.

Dazhongshi Reversible Civic Interface · Four Scales

One question narrows from city connection to typical section; scales indicate review depth only

CONCEPT PROPOSAL · NOT OFFICIAL GEOMETRY OR ENGINEERING

ordinary civic route

bounded pilot edge

service / removal route

staffed rights and stop point

Nominal scales indicate review depth only, not survey or engineering precision.

Typical section and four-state contract

An AI innovation belt for everyday public service · v0.1.4

Dazhongsi Typical Section and Four-State Contract

The ordinary route stays open; AI appears only inside a stoppable, withdrawable boundary

CONCEPT PROPOSAL · NOT OFFICIAL GEOMETRY OR ENGINEERING

HARD STOPS: blocked ordinary route · forced account/scan · undisclosed collection · failed withdrawal · unresolved safety event

The ordinary route remains open in every state; any hard stop moves directly to PAUSE.

Permits, RACI, measurement and exchange

An AI innovation belt for everyday public service · v0.1.4

From Permits to Handoff: Delivery, Measurement and Regional Evidence

No accountable owner, permit or ordinary baseline means no move from P1 to P2

CONCEPT PROPOSAL · NOT OFFICIAL GEOMETRY OR ENGINEERING

01 PERMIT GATE

✓ geometry + title

PENDING

✓ transit + route

PENDING

✓ fire + egress

PENDING

✓ accessibility

PENDING

✓ power + network

PENDING

✓ public operation

PENDING

✓ data + rights

PENDING

P0 OPEN ITEMS → paper / staff / tabletop only

02 RACI + MEASUREMENT

space steward A

public service operator R

AI trial operator R*

site safety lead A/STOP

data rights lead A

THREE COMPARISON MODES

● paper self-service

● staffed service

● optional AI assist

● proposed ≥30 completes / mode

● failure + fallback stay in denominator

03 EXCHANGE + HANDOFF

North Latitude
user questions

Jing-Jin-Ji
cross-city comparison

Future Science City
enterprise + research

Beijing E-Town
engineering + pilot

Huairou Science City
public-science cases

EVIDENCE EXCHANGE

planning: scale atlas + registry

operations: states + incident/appeal

data rights: register + deletion proof

communications: bilingual signs + brief

STAGE GATE: assigned accountability + verified permits + independent ordinary baseline + rehearsed hard stops

At least 30 completes per mode is a proposed threshold, not an achieved sample, result or official standard.

Scenarios, culture and long-term operation

An AI innovation belt for everyday public service · v0.1.4

TEN SCENARIO CARDS

Open-source release · trustworthy sandbox · edge compute · slow-mobility guide · oral history · low-carbon corridor · research transfer · data-governance room · service sample street · global civic route

LONG-TERM OPERATION

Problem Season · Open-source Season · City Beta Season · Proof Week. Ordinary days, quiet periods and failure states are designed too.

PUBLIC QUESTION → ORDINARY BASELINE → BOUNDED VALIDATION → OPEN EVIDENCE → RETAIN / REVISE / RESTORE

THREE-PART CULTURAL STORY

Independent railway engineering → open Zhongguancun innovation → public co-creation in the AI era. No scan, account or data provision is required.

REGIONAL BOUNDARY

North Latitude, Future Science City, Huairou Science City, E-Town and Jing-Jin-Ji are question-evidence exchange nodes only, not asserted partners.

Metrics, risk and handoff

An AI innovation belt for everyday public service · v0.1.4

JING-ZHANG CIVIC LOOP

A metric advances only when its evidence chain closes

Facts, provisional geometry, design and stop conditions stay separate; four gates review the claim

11,412,825 m ²	12.34%	7.33%	FAR / height
Provisional geometry area	Provisional green ratio	Provisional public-space ratio	Pending official data

Retain / revise / retire; presentation never substitutes for evidence

Concept proposal · provisional geometry · not a statutory plan or implementation approval

PROVISIONAL GEOMETRY

11,412,825 m² · green 12.34% · public space 7.33%

RISK REGISTER

8 dimensions; high-risk items have professional or public review paths

HANDOFF

planning · public operations · data rights · bilingual communications

BOUNDARY

local checks are not official CI, approval or implementation authority
