

One small site, one ordinary path

Qinghe civic interface: obtain a human explanation and handoff for a step-free transfer to Line 13 without a smartphone

This iteration no longer substitutes a large narrative for site evidence. The line stops outside fare and security control; AI is optional support only.

one real small site

one ordinary civic-service task

complete N0-N5 non-AI path

evidence-backed
ground-underground relationship

Evidence base and what remains unknown

Public records support functional relationships, not an exact route, scale or engineering placement.

VERIFIABLE

Official station diagrams and records confirm surface walking, underpasses, B1 services and transfer-related elements.

TO VERIFY

Exact entrance, turns, gradient, level change, clear width, opening state, public boundary and staffed point.

DESIGN RESPONSE

Fixed overview, paper route card and handoff marker; all reversible and outside fare or security control.

Core sources: QH-STATION-MAP-2026 · QH-UNDERGROUND-WALK-2026 · QH-STATION-FLOORS-2019 · QH-B1-SERVICE-HALL-2024 · QH-ACCESS-AUDIT-2025 · QH-HUMAN-HANDOFF-2026

Ground-underground: draw only what evidence permits

Solid = publicly supported; dashed = element exists but exact relationship unknown; orange = proposed with no authorised placement.

Qinghe civic interface · ground-underground evidence

Solid links are supported by public evidence; dashed links show existing elements whose exact route is unknown

NTS · NON-SURVEY · NON-IMPLEMENTATION

Complete non-AI path and failure branches

The ordinary chain needs no network, AI, account or scan. A person explains interruption or stops honestly.

“Transfer without a smartphone” · complete non-AI flow

NTS · NON-SURVEY · NON-IMPLEMENTATION

One ordinary task: ask for and reach the human handoff for a step-free route to Line 13

Complete = a person takes over, or states the limitation and real alternative; AI never fills an unknown route

Three reversible components; continuous human responsibility

AI may translate, read aloud or prompt only. It may not confirm lift status or fill an unknown route.

Three reversible components · continuous human responsibility

AI is optional translation / read-aloud support; switching it off leaves the ordinary service chain intact

NTS · NON-SURVEY · NON-IMPLEMENTATION

Stop conditions matter more than smart features

A smooth demonstration must not conceal a real interruption.

F1 Network / AI off

Fixed overview, paper and people continue; the main chain is unchanged.

F2 Lift unavailable

State the break; use only a current staff-confirmed alternative, otherwise stop.

F3 B1 unavailable

Stop descent at ground level and point to a visible on-duty person.

No claim of: exact underground route, scale or dimensions, title, utilities, fire, civil defence, metro operating boundary, footfall or capacity, cost, staffing or delivery.

Relation to the wider urban design

The Jing-Zhang corridor remains the coordinated study frame. The Qinghe prototype neither replaces statutory boundaries nor derives engineering placement from the overall diagram.

The 11.4 km², green ratio and public-space ratio belong to provisional overall-design geometry, not the Qinghe site or its performance. Dazhongsi and other key areas remain conceptual; AI Origin is a historical lead only.

Next stage: add evidence, not promises

A review loop that remains possible without official cooperation.

1 Visible-site check

Record only public entrances, signs, visible on-duty people and current opening state; infer no title.

2 Accessibility walk-through

Real users or proxies record interruption points; do not pre-claim distance or time.

3 Paper-card mock-up

Test whether the question is understood and a person can hand over; collect no identity, voice or trail.

4 Professional gate

Fire, civil defence, metro, structure, MEP or construction questions go to professionals and authorities.
