

AN AI CITY EVERY BODY CAN USE INDEPENDENTLY

ONE PUBLIC BASELINE · TWO EQUIVALENT PATHS · THREE KEY AREAS

CONCEPT PROPOSAL / NOT A STATUTORY PLAN / NOT AN ENGINEERING ALIGNMENT

Urban intelligence is measured not by device count, but by whether anyone can understand, choose, complete and exit the same public service.

11.4128 km²

Provisional overall site

310,807 m²

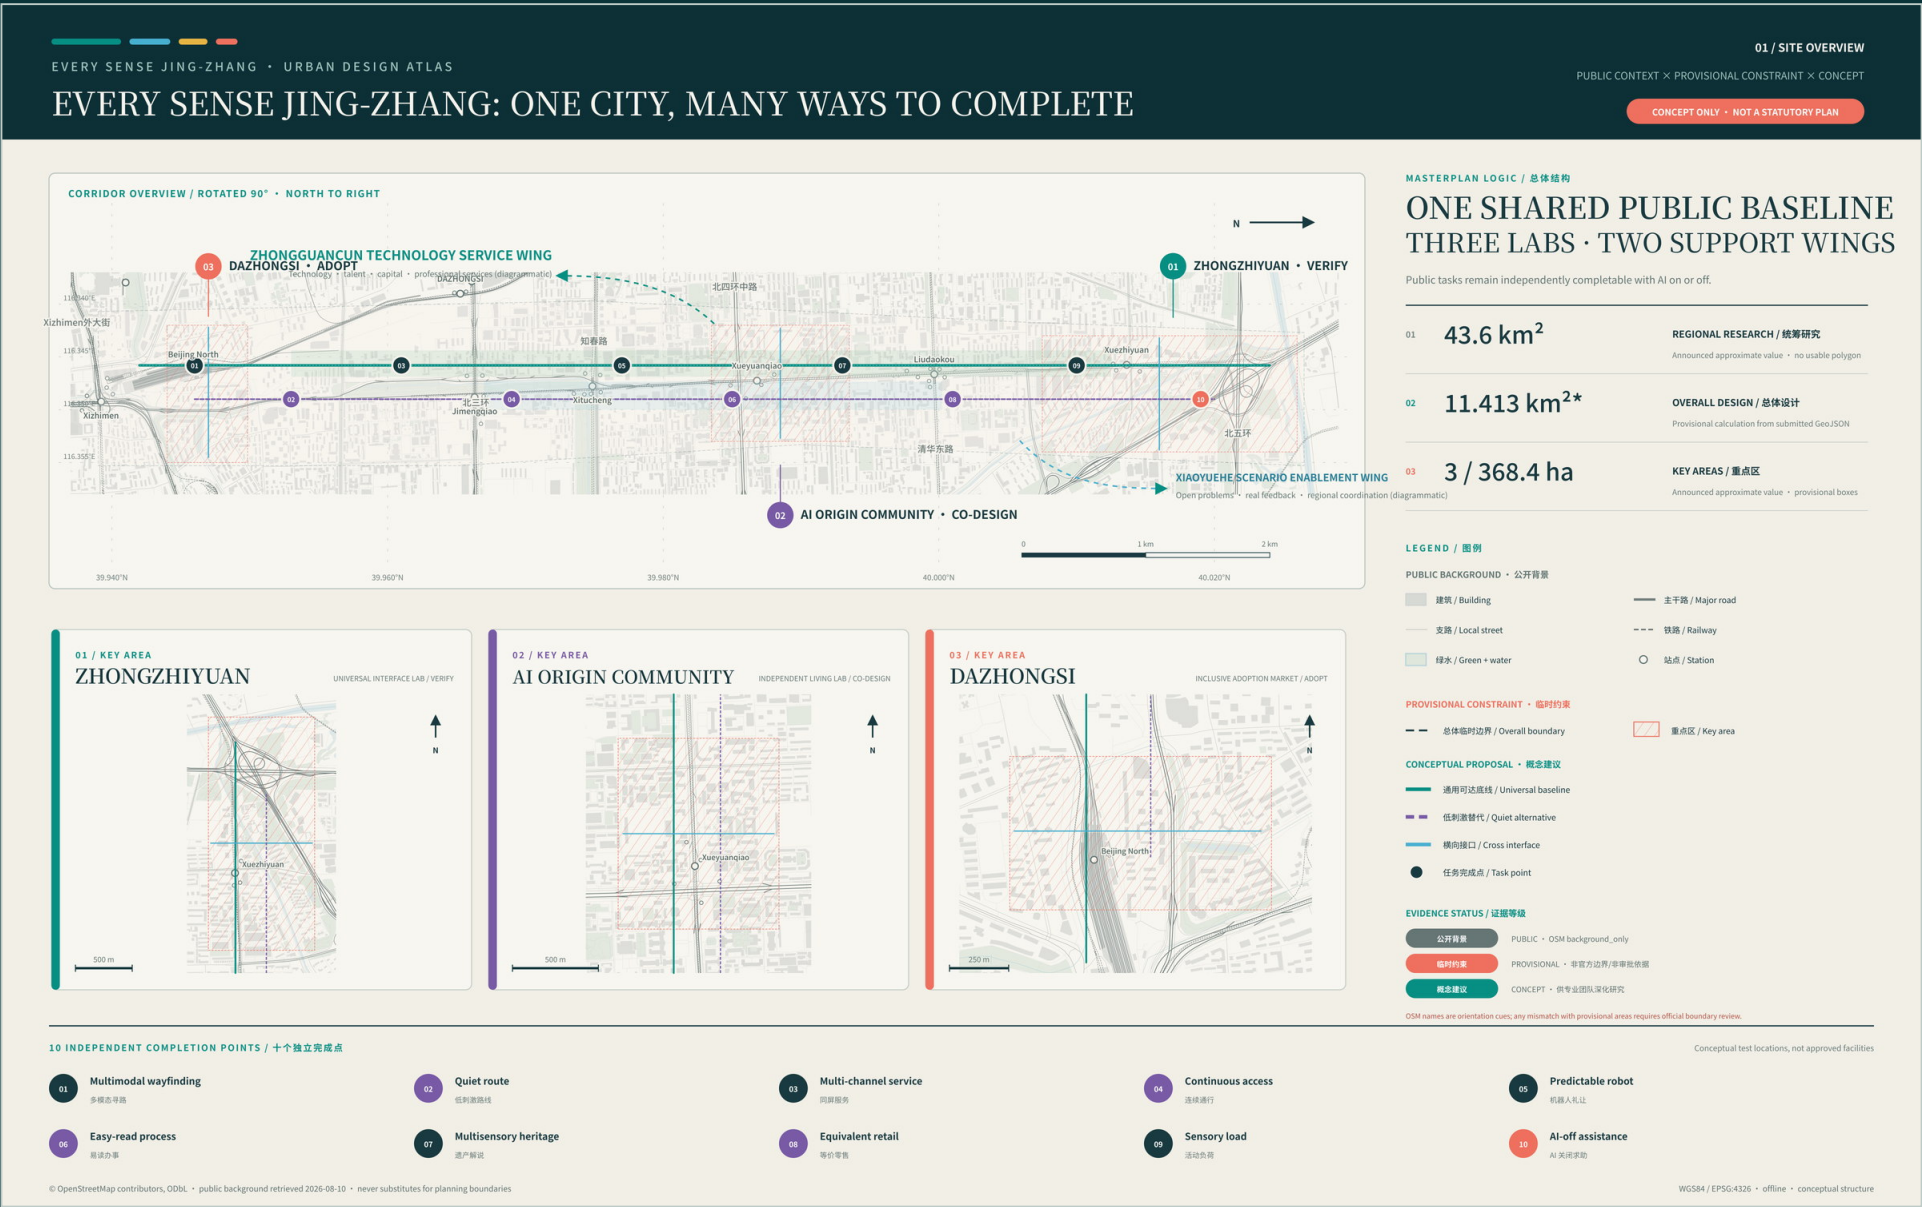

Conceptual building footprint

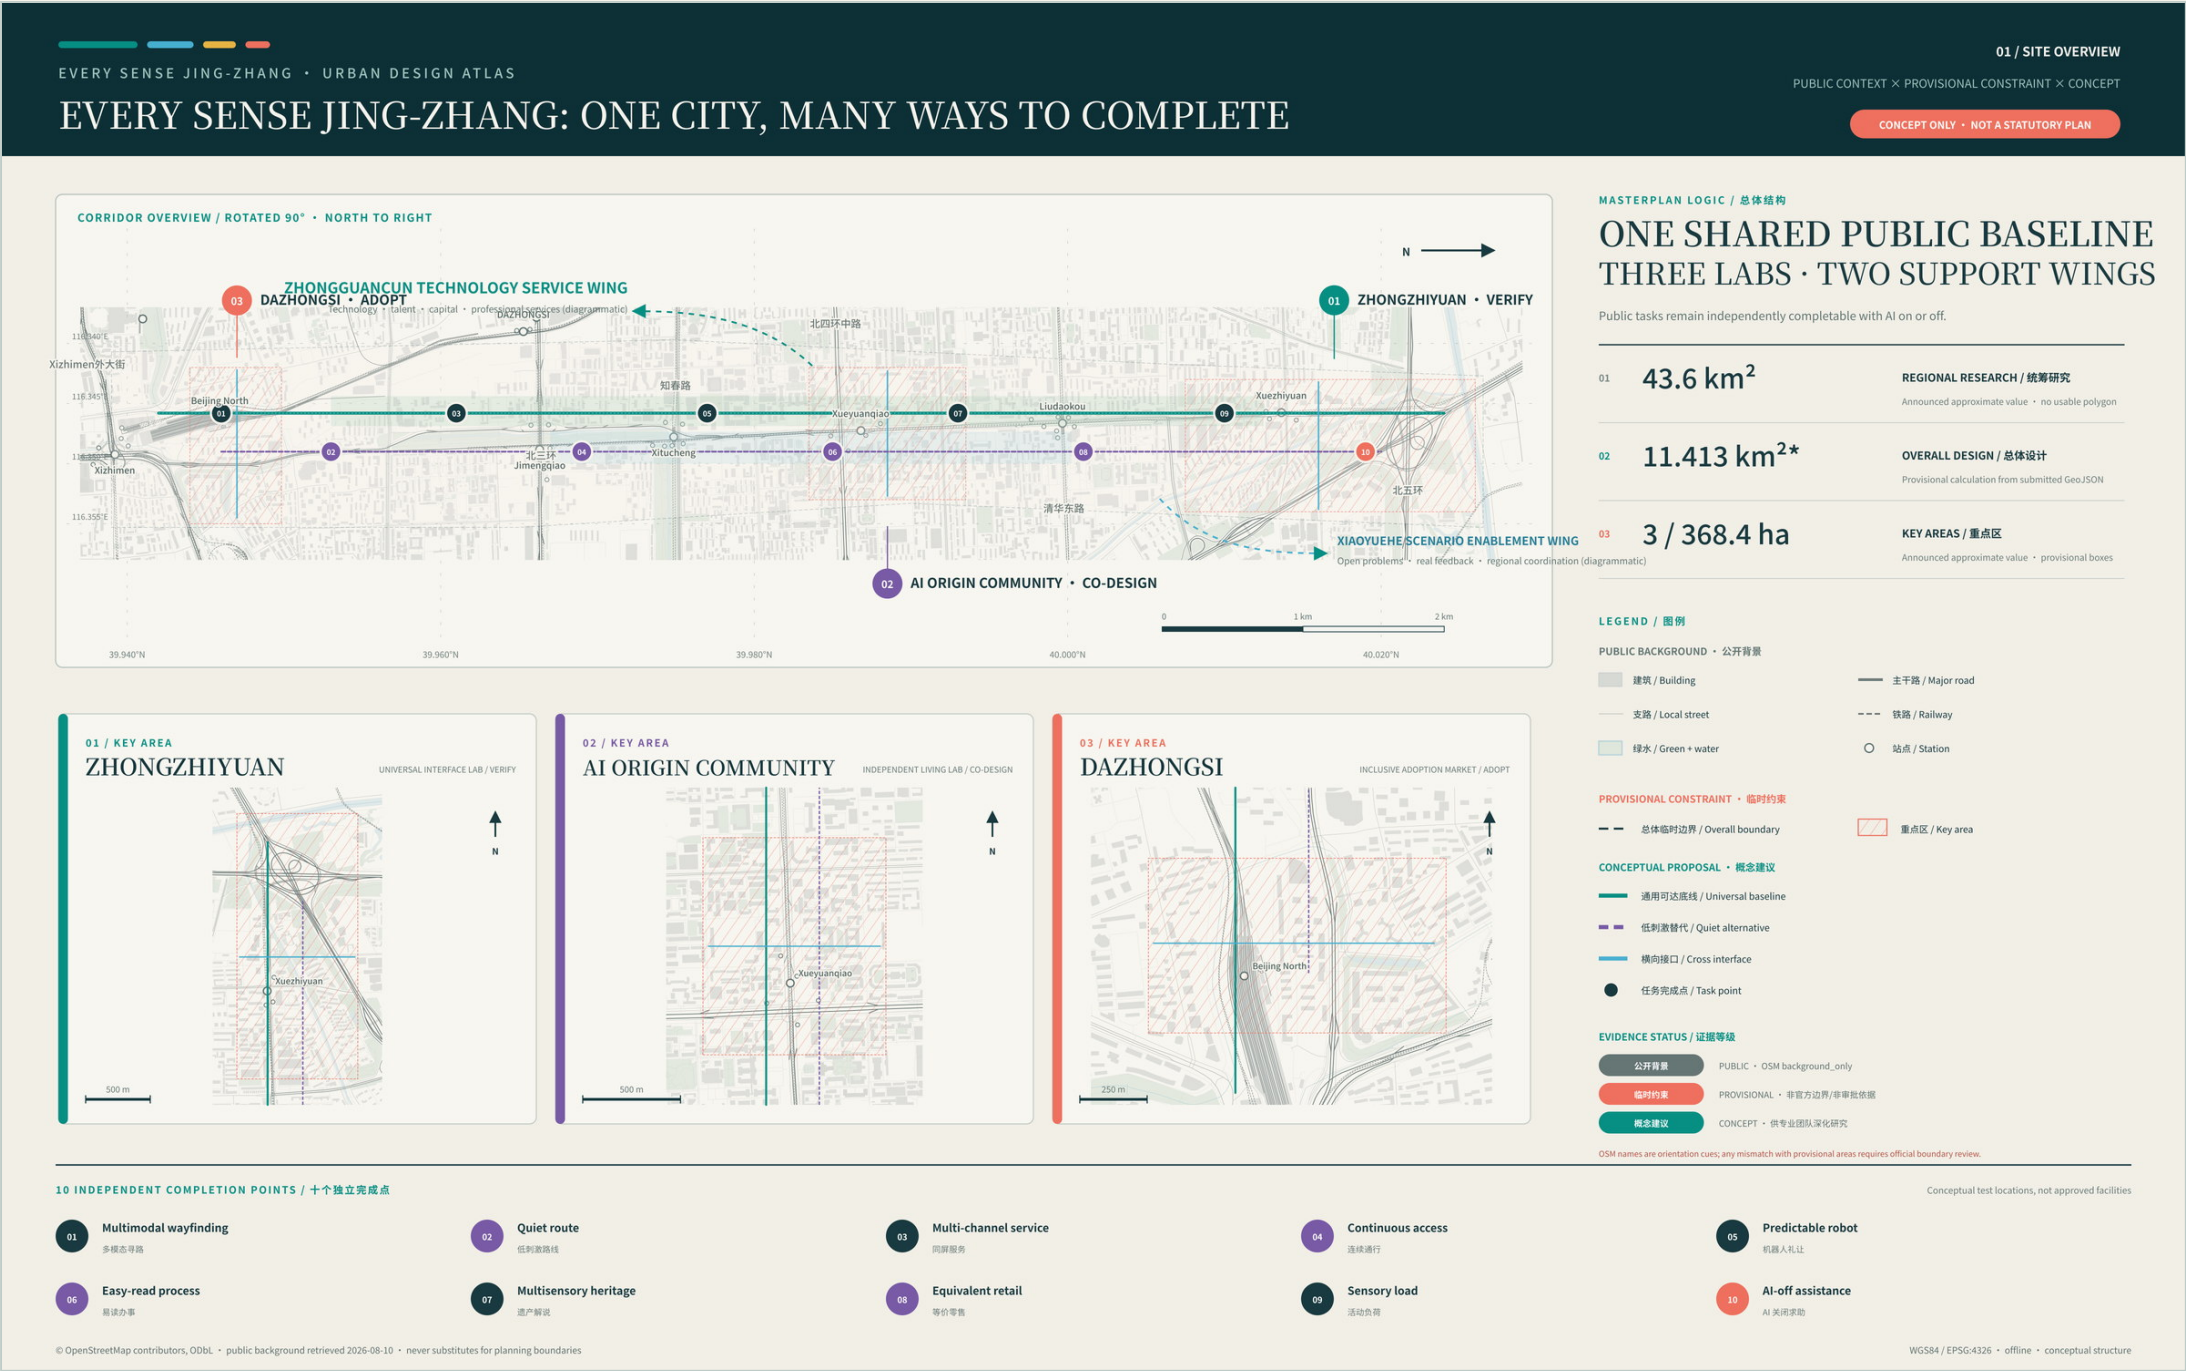

12.3423%

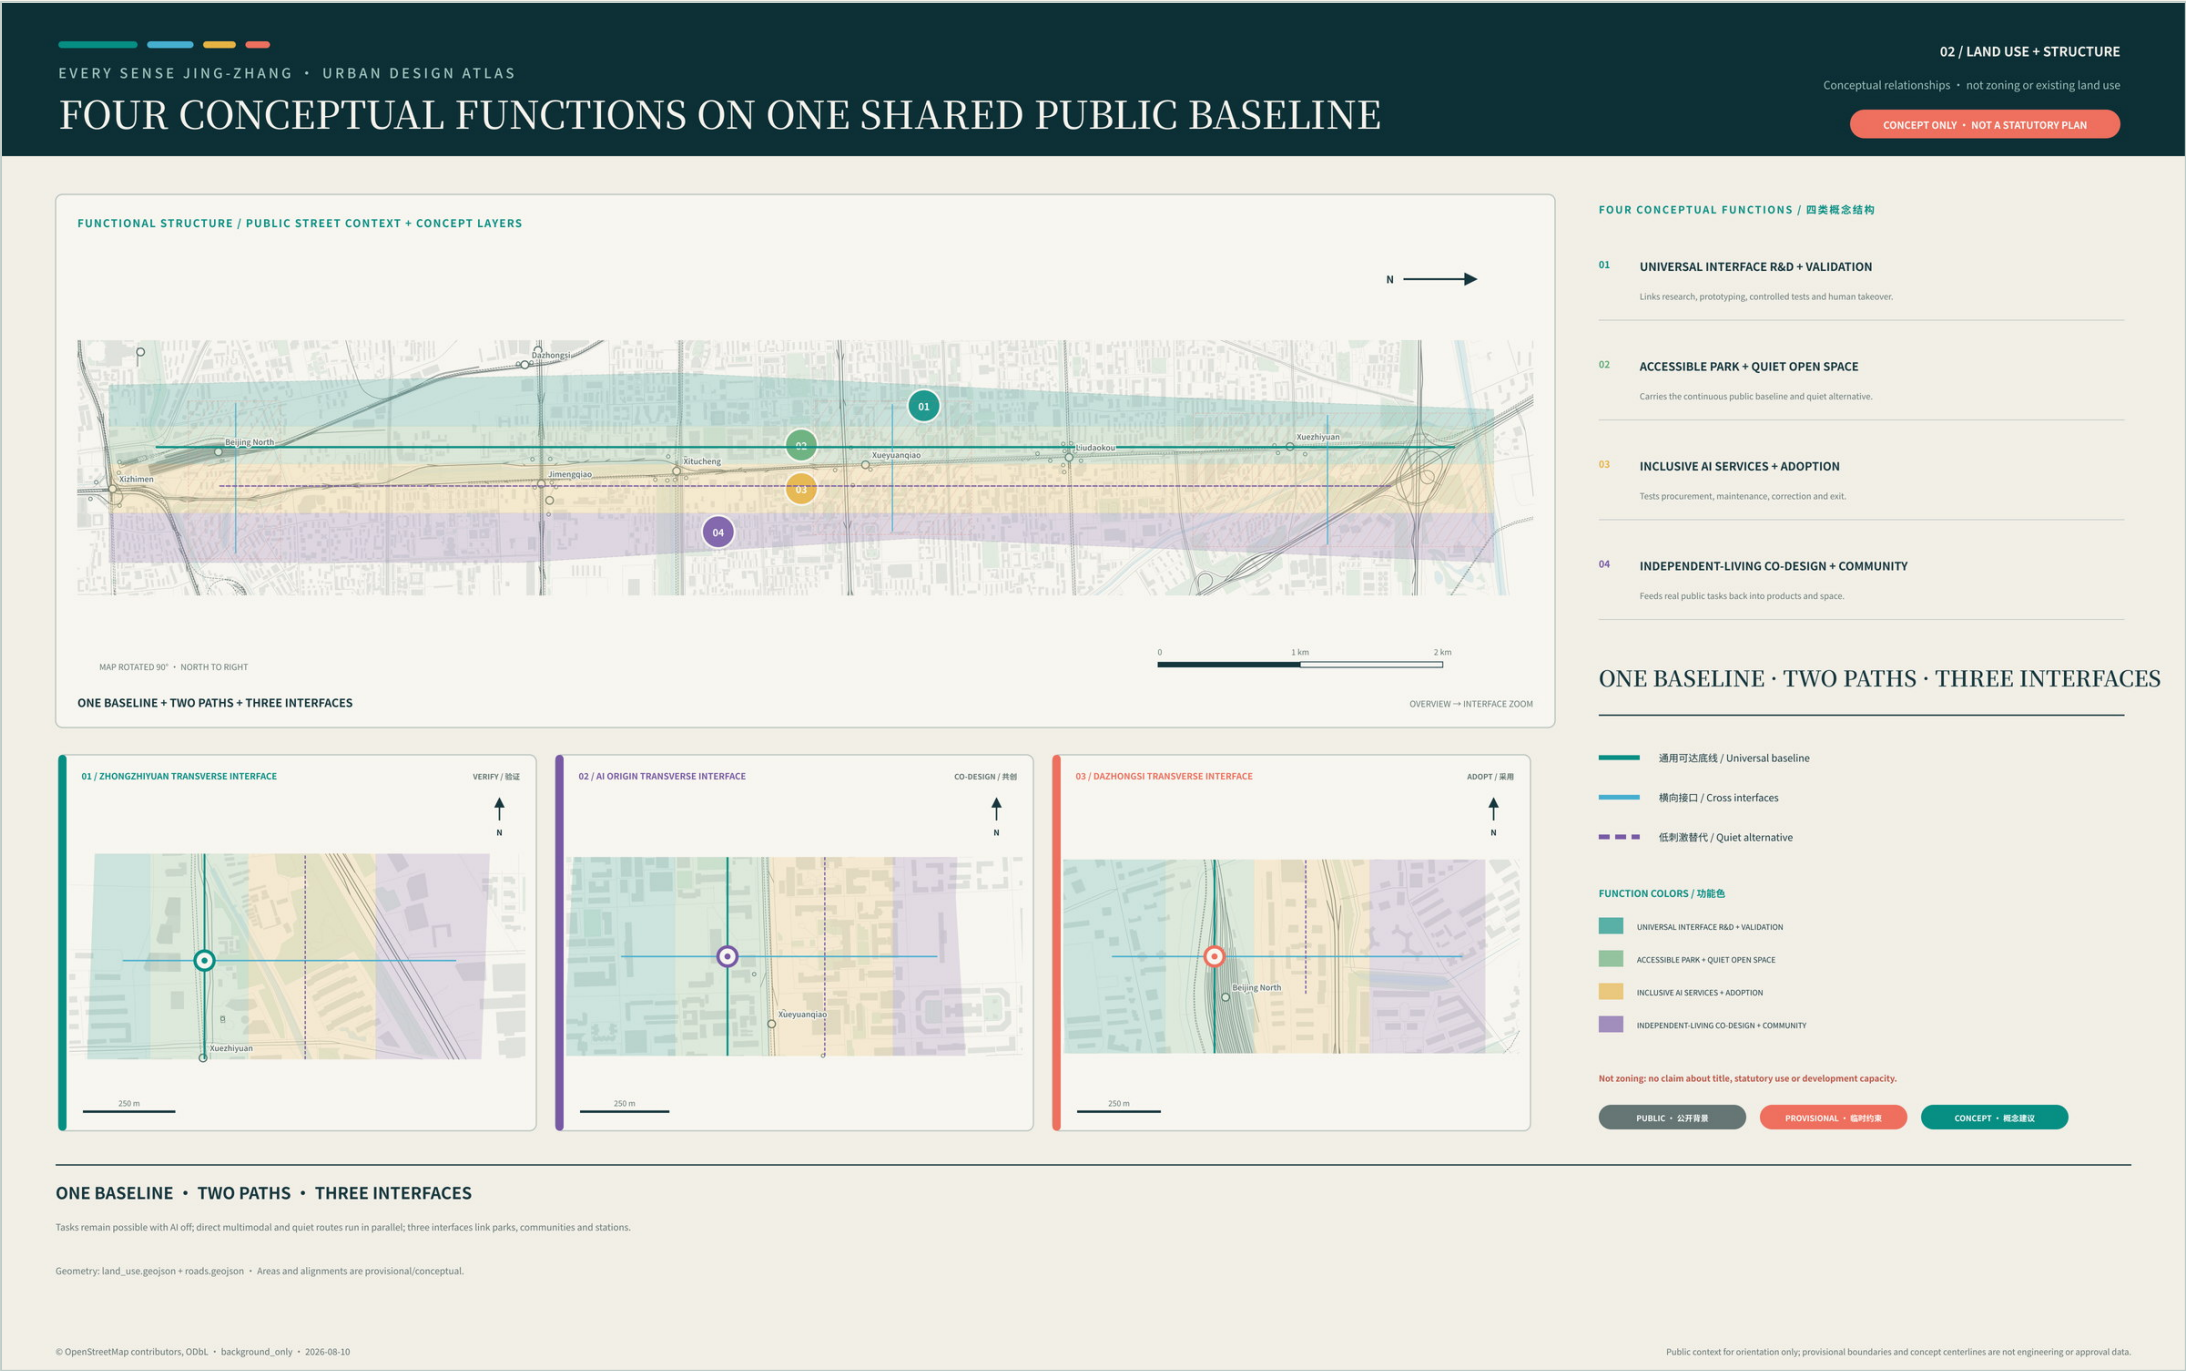

Provisional green-space ratio

03 / LAND USE + STRUCTURE

Four conceptual functions share one baseline

Functional relationships test whether R&D, public space, adoption and community service support each other. They are not existing land use, zoning, title or development-capacity conclusions.

- Universal interface R&D + validation
- Accessible park + quiet open space
- Inclusive AI services + adoption
- Independent-living co-design + community

05 / MOBILITY + BLUE-GREEN

Basic service remains equivalent with AI on or off

The direct multimodal path and quiet alternative run in parallel. With AI off, offline or declined, fixed signs, paper and easy-read information, staffed help and an account-free path remain available. Centerlines express conceptual relationships only.

Recomputed metrics test package consistency, not statutory compliance

Site area, building footprint, green ratio and public-space ratio come from provisional submitted geometry. Inclusive performance requires paired tests with real participants and reasonable accommodation; all such outcomes remain unmeasured.

Stage Zero: 90-day evidence gates, not a construction schedule

G0 verifies evidence, permissions and task scripts; G1 builds reversible prototypes; G2 runs closed paired AI-on/off tests; G3 brings independent professional and participant review.
Failure means revise or stop.
