

# 01 Reviewer brief and evidence index

A legible, measurable, contestable, and withdrawable public test line

THE DECISION

# SWITCH vague discomfort into verifiable action

AI generates candidates, never the final choice; every move carries an owner, evidence, and an exit condition.

CONCEPT ONLY

3 YARDS / 7 STEPS

Zhongzhiyuan measures · AI Origin compares · Dazhongsi fulfills

FOUR REVIEW QUESTIONS

Spatial spine

One spine + three yards + three interfaces

roads.geojson / key\_areas

AI boundary

Candidates, assumptions, feedback; final choice stays public

switch-protocol / ledger

First-year move

100 m demo + red-card drill + three no-permanent pilots

catalogs / phasing

Evidence discipline

Formed / provisional / unknown / future validation

metrics / assumptions

# 02 Spatial spine and the first 100 metres

Three scales, three non-interchangeable yards, and one observable public route

43.6 km<sup>2</sup>

Coordination study

Method package, regional interfaces, annual public ledger

11.4 km<sup>2</sup>

Overall design

Spine, blue-green network, land and transport interfaces

368.4 ha

Key-area range

Observable working yards

## ONE SPINE · THREE YARDS · THREE INTERFACES

## THE FIRST 100 METRES

# 03 Three key areas: measure, compare, fulfill

Each area has a move, an output, a human entry, and a return route

Zhongzhiyuan

Measure the issue

Signal plaza

Baseline lab

Soil window

Human review room

Red: data overreach

Does not generate the final scheme

PROV-KEY-001

AI Origin

Let disagreement stop

Zero-km plaza

Co-drawing table

Open-source incubator

Locomotive classroom

Red: objection unanswered

Does not treat a demo as the answer

PROV-KEY-002

Dazhongsi

Check fulfillment

Human window

Shop continuity

Annual ledger wall

Withdrawable market

Red: service not equivalent

Does not turn a test into permanent deployment

PROV-KEY-003

Professional review checks whether each interface is clear: where it sits, whom it serves, who reviews it, and how it withdraws on failure.

# 04 Scenario system and four release gates

Scenarios are the fast track; five slow variables are the chassis; red cards stop the system

## 12 SCENARIO CARDS

spine

## FOUR RELEASE GATES

- G1 data and safety
- G2 human service and access
- G3 affected-group review
- G4 annual slow-variable health

A failed gate keeps the scenario yellow, smaller, returned, or retired; the human path remains.

## FIVE SLOW VARIABLES

SV-01 canopy and shade

Measure before target

SV-02 infiltration and recovery

Measure before target

SV-03 access continuity

Measure before target

SV-04 local-use continuity

Measure before target

SV-05 children’s travel

Measure before target

# 05 Single catalog: five landmarks and eighteen projects

IDs, names, anchors, and statuses synchronize across narrative, web, metrics, matrices, and drawings

Conceptual recommendations only; not approved, authorized, or built. phasing.geojson records three conceptual bands, not an engineering ledger for each project.

# 06 Implementation, metrics, and exit

Test reversibly before permanence; write the stop condition before discussing AI speed

## FOUR PHASES

**0–3 mo Baseline**

Rights, sample points, human fallback

**4–6 mo Pilot**

100 m route, drawing table, red-card drill

**7–12 mo Review**

Five slow variables, exit form, public artifact

**Year 2 Renew**

Version delta, maintenance, recalculated metrics

## SIX LAUNCH PACKAGES

A

A Baseline: P01/P02/P06

B

B Interfaces: P05/P12/P14

C

C Origin: P03/P07/P09

D

D Fulfillment: P08/P13/P16

E

E Culture: P10/P11/P17/P18

F

F Industry: P04/P15

**METRIC DISCIPLINE**

45 metrics split into:  
recalculable design quantities  
context references  
first-year measurements

Unknown is not a forecast.

## EXIT CONDITIONS

**Safety, privacy, or rights: stop and hand over**

**Two worsening seasons: repair before expansion**

**No artifact or successor for two years: remove**

**Official data arrives: recalculate and publish delta**
