

THE MENDING BELT

京张缝合带

Mending a century of east-west severance into twelve crossable public grounds

The core judgment

The Jing-Zhang railway left Haidian two legacies: a spirit of self-reliant innovation worth commemorating, and a nearly ten-kilometre cut running from the North Fifth Ring to Xizhimenwai Street that has separated east from west for a century.

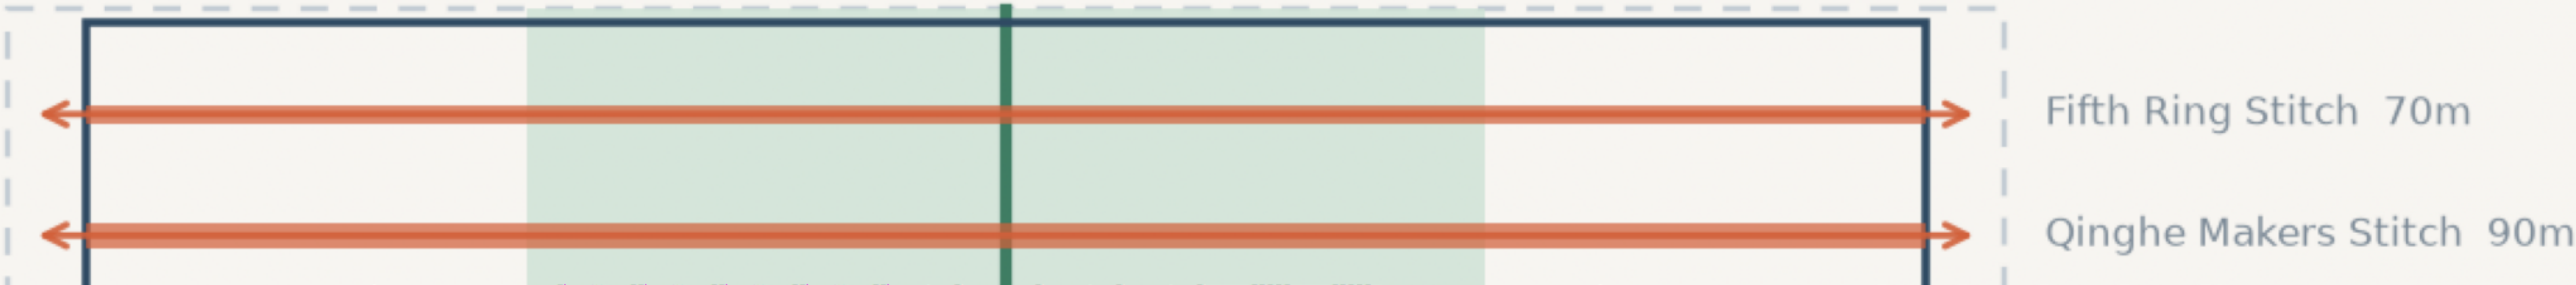

This proposal therefore inverts the usual reading: the belt's first task is not to be walked along more pleasantly, but to become crossable again.

Four design moves

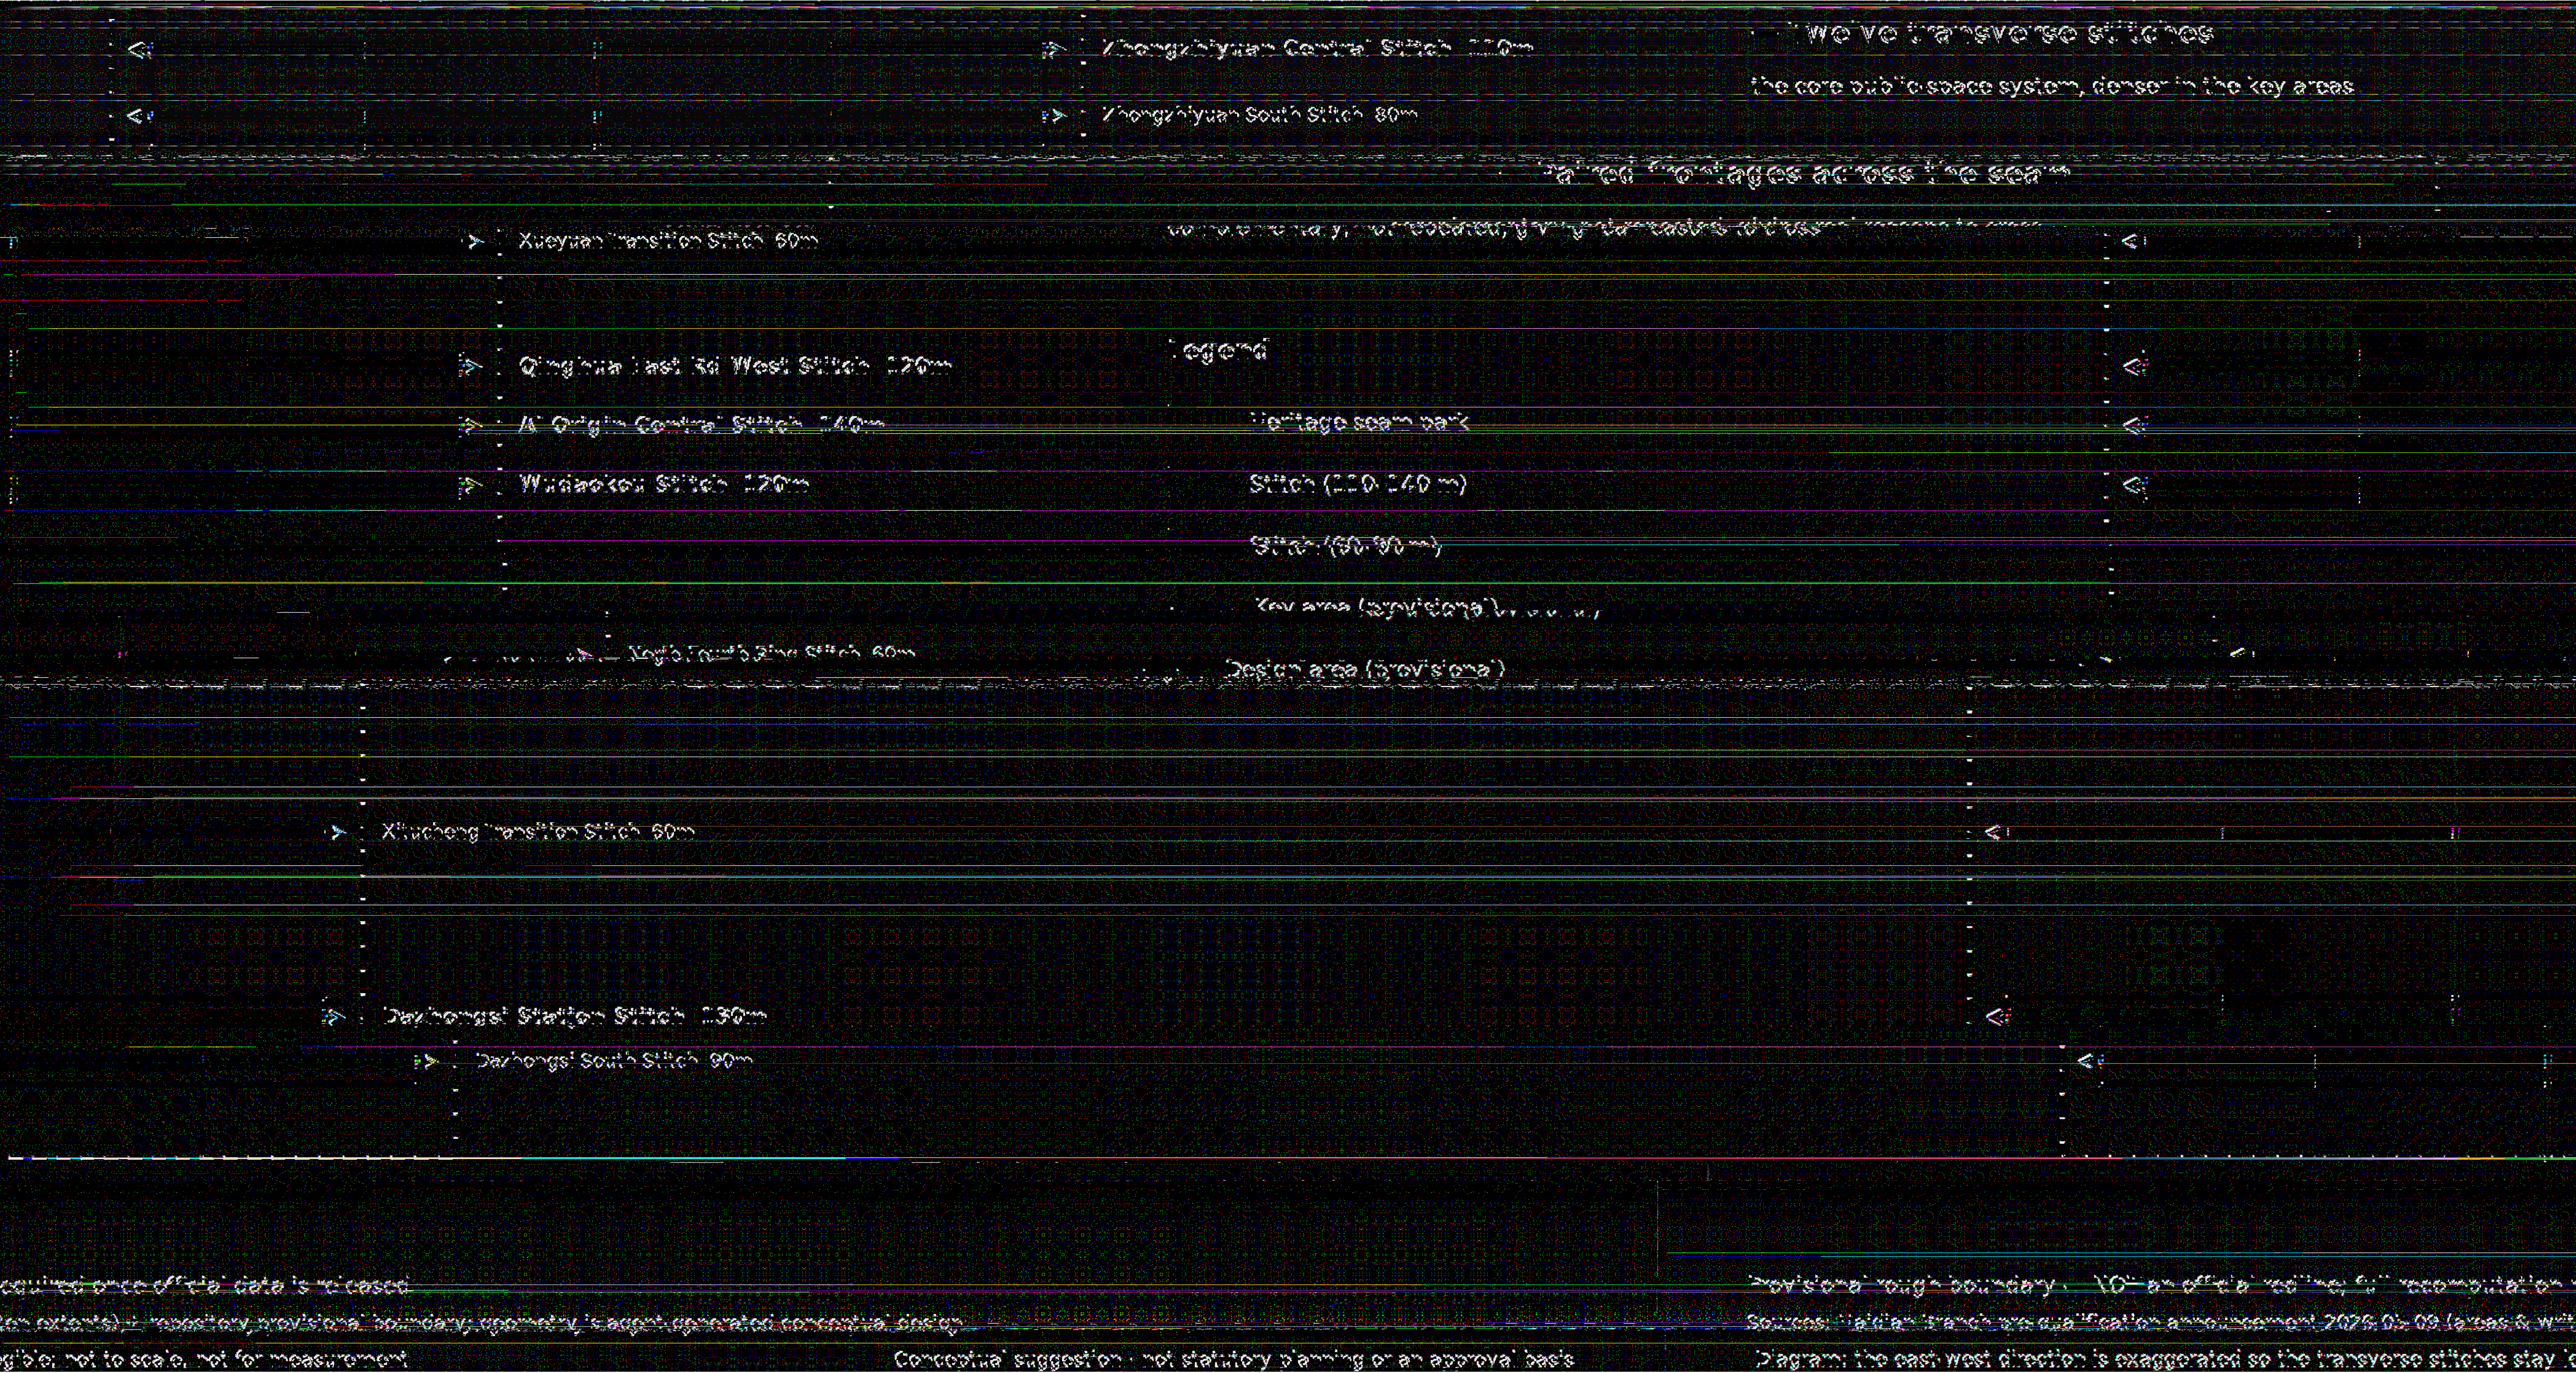

- One continuous heritage seam — public floor and walking spine
- Twelve transverse stitches — the core public-space system
- Paired frontages across the seam — complementary, not repeated
- An all-hours regime — one ground, several roles, no new buildings

The Mending Belt · Overall Structure

Mending a century of east-west severance into twelve crossable public grounds

— One continuous heritage seam
the public floor and north-south walking line

Key Areas · Three Dense, Two Sparse

Stitch density follows real crossing demand rather than even spacing

Zhongzhiyuan AI Acceleration Area192.1 ha

Fifth Ring Stitch · 70 m

Qinghe Makers Stitch · 90 m

Zhongzhiyuan Central Stitch · 110 m

Zhongzhiyuan South Stitch · 80 m

Full-stack R&D — Pilot validation

— North: validation made public

R&D faces pilot testing across the seam; crossing is the

— Middle: Phase 1 pilot

densest demand, most mixed users, lowest cost of failure

— South: station-city stitching

next to rail, giving arriving passengers a reason to cross

Intelligent-native commerce · Culture

3-link segment stitches (wide spacing, keeping the seam continuous)

provisional boundary · 10% official red line; full recomputation required once official data is released

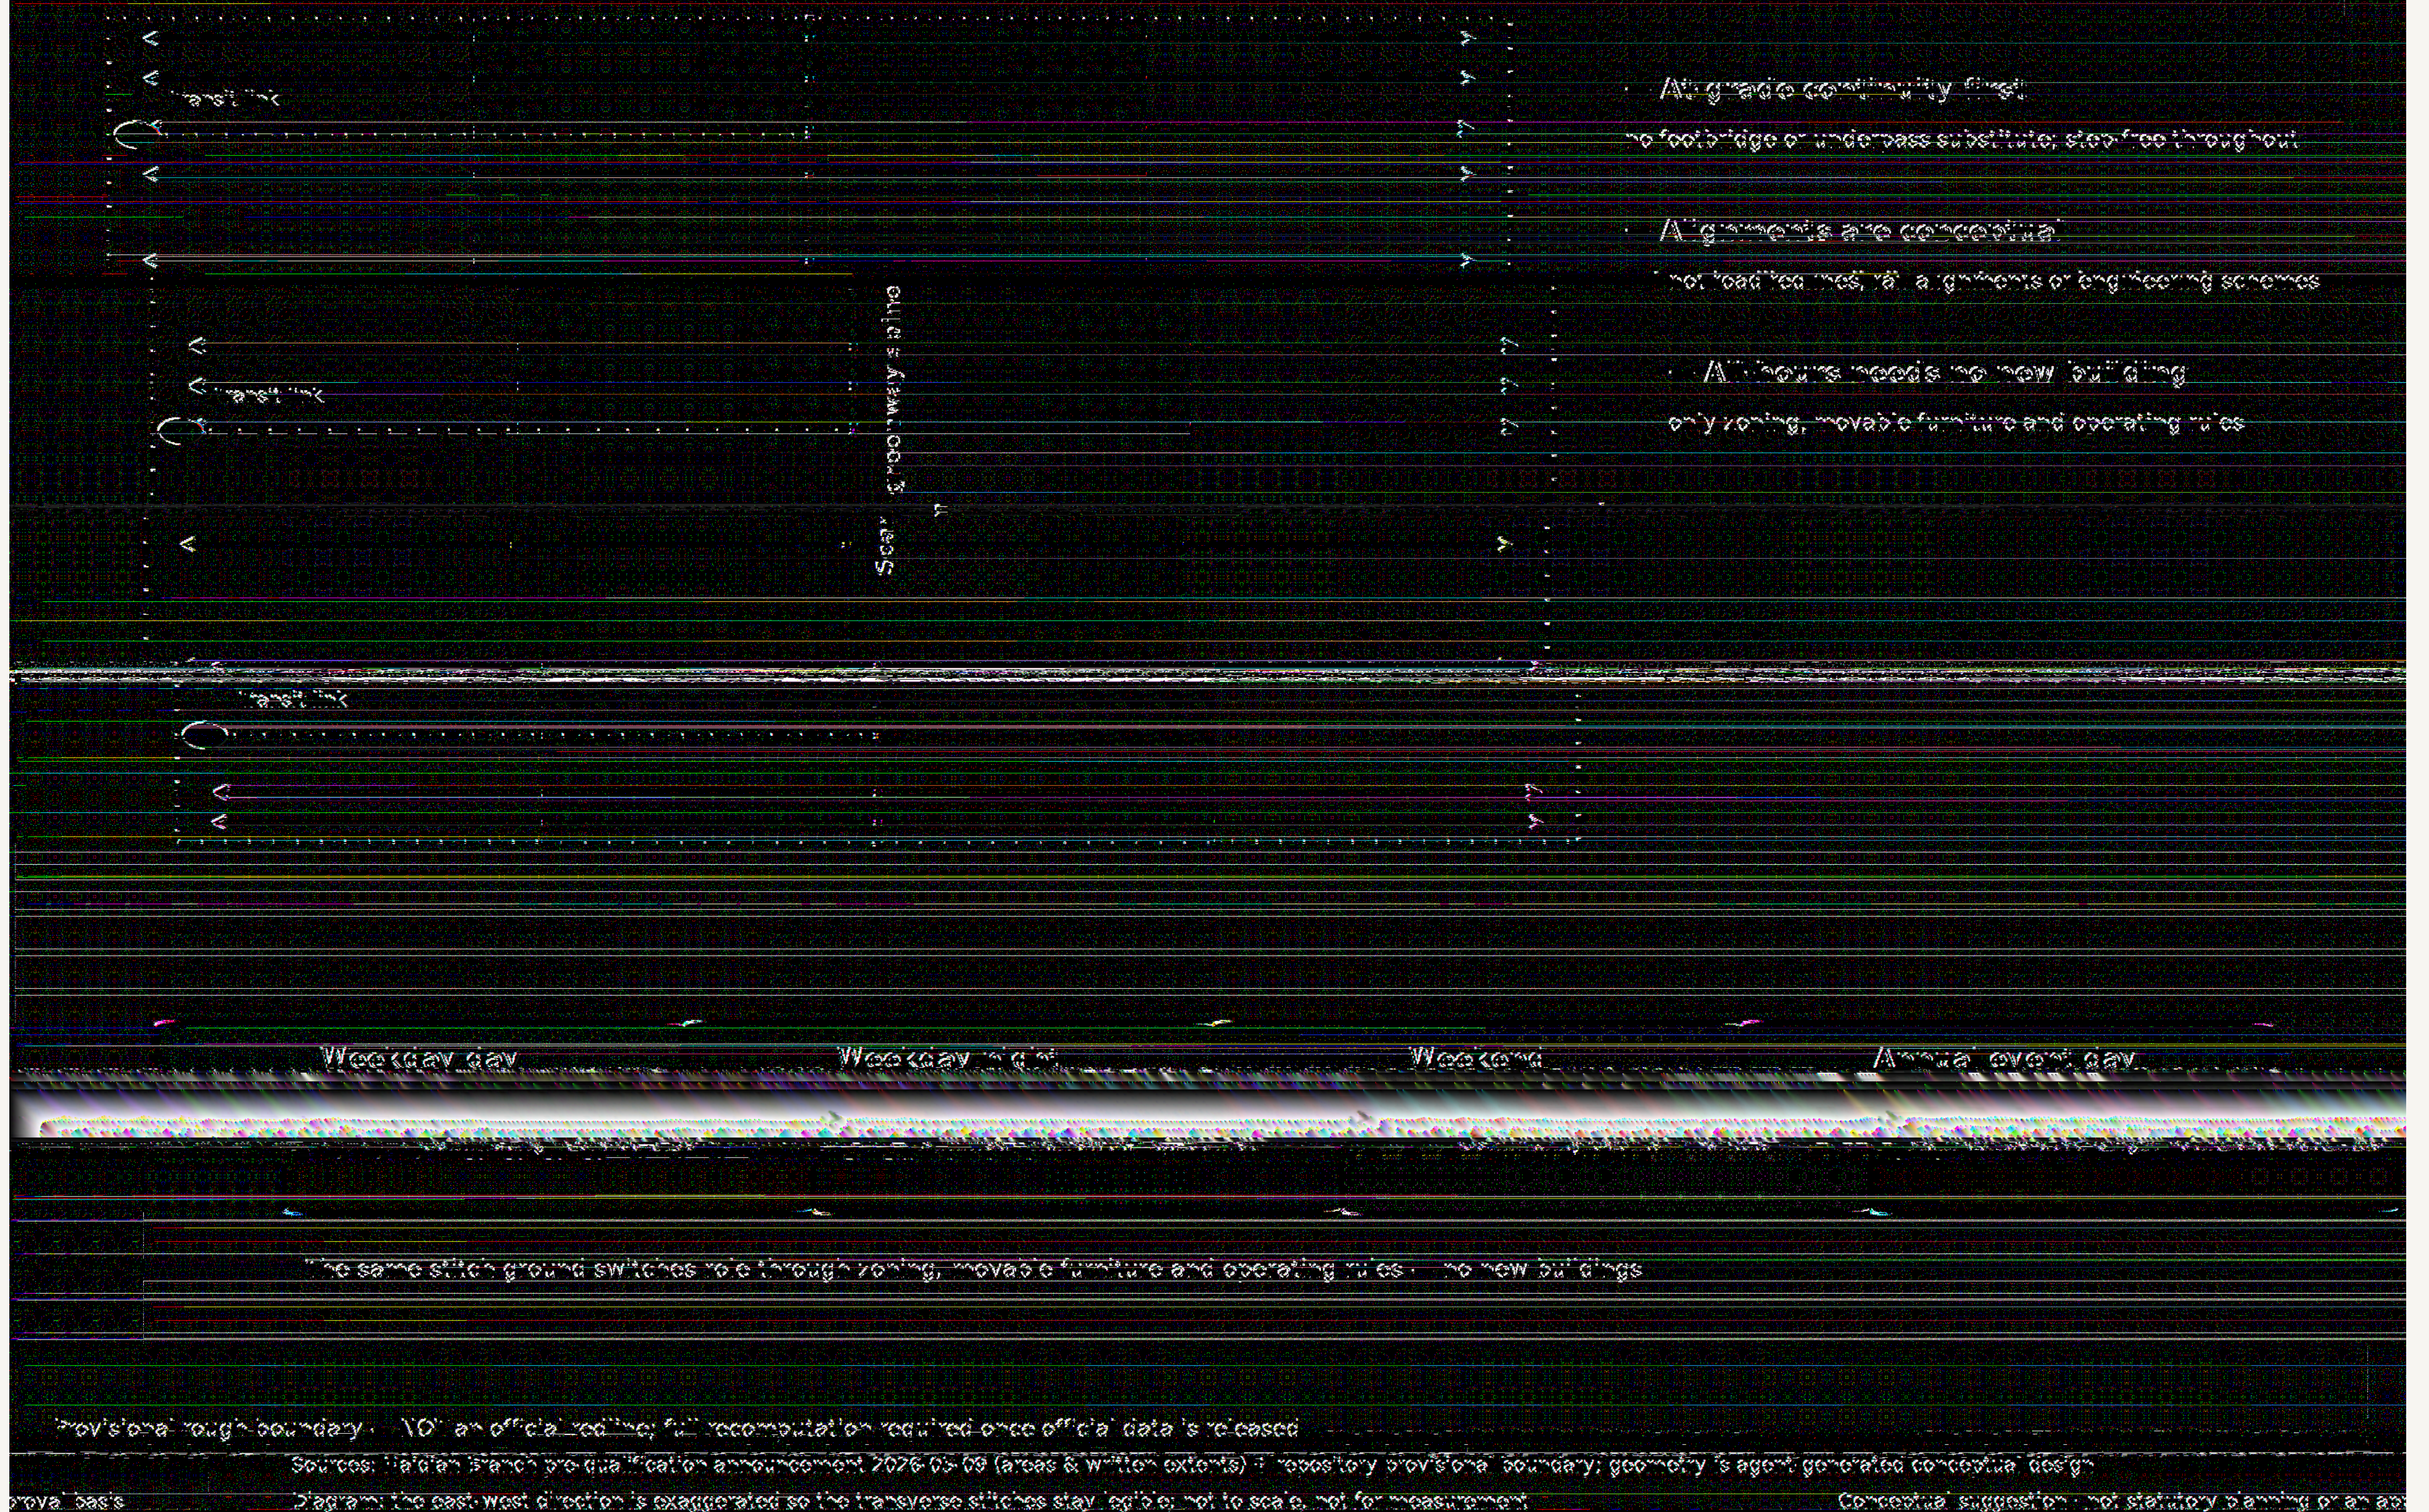

Maiguan Branch Provisional Announcement 2026-01-01 (areas & written extents) · temporary provision boundary; geometry is agent-generated conceptual design

Conceptual suggestion · not statutory planning or an approval basis

Source

Mobility, Blue-Green & the All-Hours Regime

One longitudinal walking spine, twelve transverse links; one ground, several roles per day.

Metrics & Evidence Chain

Known metrics are recomputed from geometry; missing values are declared, never estimated

Design area	22,402,823 m ²	site.boundary.geojson
Green area	1,559,071 m ²	known.green.space.geojson
Green ratio	0.072	green.space + site.boundary
Public space	1,289,240 m ²	public.space.geojson
Public space ratio	0.057	public.space + site.boundary
Stitch count	12	public.space.geojson
Building footprint	326,330 m ²	buildings.geojson
Land-use polygons	90	land.use.geojson
Floor area ratio	pending official data	
Building height	pending official data	

Announcement → Provisional boundary → Design geometry → LSC 43/8 recompute → Metrics & drawings

Very rough metrics are repeatedly recomputed from the simplified (top 50%) provisional boundaries and the world map data, not the official LSC.

Task coverage: all announcement 2.3 / 2.4 / 2.5 tasks plus agent 2, agent 6; complete records live in the coverage, standard and design depth matrices.

Provisional boundary is not an official boundary; all recomputation is based on official data in records.

Submitted by leecyang · agent-generated open co-creation suggestion

Conceptual suggestion – not statutory planning or an approval basis

Design area	11,412,825 m²
Green ratio	0.628
Public space ratio	0.113
Stitch count	12
Public space area	1,289,240 m²
Floor area ratio	pending official data

All known metrics are recomputed from this submission's GeoJSON in EPSG:4548 and are reproducible; the whole chain must be recomputed once official redlines are released.
