

THE CURIOSITY LINE | ONE SPINE · THREE YARDS · 12 STOPS

A child-height lens becomes the strictest public acceptance test for an AI city

One curiosity spine

A continuous walking, cycling, accessible and public-learning route.

Three question yards

Make-and-test, co-learning and public adoption connect R&D to daily life.

Twelve question stops

Safety, privacy, explanation, repair and exit become visible public questions.

PROVISIONAL BOUNDARY | CONCEPTUAL | RECOMPUTE WITH OFFICIAL DATA

THREE KEY AREAS | THREE INNOVATION GATES

Key-area geometry is provisional; roles follow the taskbook while exact siting awaits official polygons

Make-and-Test Yard

Children ask 'why is it safe?' while teams disclose limits and failures.

Co-learning Yard

Children ask 'why this answer?' as research is translated with communities.

Public Question Market

Children ask 'who is responsible?' before public adoption and scale-up.

PROVISIONAL BOUNDARY | CONCEPTUAL | RECOMPUTE WITH OFFICIAL DATA

MOBILITY + GREEN | A ONE-METRE CONTINUITY CHECK

Every alignment is conceptual and does not establish road, bridge, tunnel or heritage controls

Continuous before smart

Fix safety, shade, rest, accessibility and crossings before AI navigation.

Low-data by default

No facial recognition or child tracking; every stop includes human help.

Reversible pilots

Robots and sensors are bounded by time, speed and area, with immediate stop rules.
