

JING-ZHANG WALKABILITY AUDIT

Connection research and reversible micro-renewal

W

JING-ZHANG WALKABILITY AUDIT

Status check, multi-period observation, human confirmation, reversible action

CURRENT EVIDENCE STATE

Evidence status, not approval. Dashed taskbook context does not locate any candidate site or route.

DECISION

The proposal verifies status, observes routes, human-confirms a problem, tries one non-AI reversible action, and removes it on no benefit or harm.

PROVISIONAL / CONDITIONAL / REVERSIBLE

DESIGN BASIS

Official task and project status are not site diagnosis

W

JING-ZHANG WALKABILITY AUDIT

Status check, multi-period observation, human confirmation, reversible action

CURRENT EVIDENCE STATE

Evidence status, not approval. Dashed taskbook context does not locate any candidate site or route.

DECISION

Official material supports the task and classifies candidate status. Route-level conditions, users, permission, and problems remain unverified.

PROVISIONAL / CONDITIONAL / REVERSIBLE

THREE-LEVEL SCOPE

Walkability as the first testable spatial thread

DECISION

Strategic research asks who frames problems; the overall area holds the audit; key areas remain taskbook constraints rather than invented local roles.

W KNOWN / UNKNOWN / WITHHELD

The map records evidence status; it does not allocate land or calculate development

KNOWN

- Taskbook text and counts
- Provisional repository polygons
- Laws and method boundaries

UNKNOWN

- Existing use and buildings
- Road/rail/accessibility conditions
- Ownership, utilities, heritage, ecology
- Users, actors, budget, baseline

WITHHELD

- Land-use mosaic
- Building footprints and demolition
- Road or blue-green alignments
- Geographic construction phasing

Technical 0 means no asserted polygon; it never means the real site has zero green or public space.

Evidence status, not approval. Dashed taskbook context does not locate any candidate site or route.

PROVISIONAL / CONDITIONAL / REVERSIBLE

OVERALL DESIGN

Known, unknown, and deliberately withheld

DECISION

No land-use mosaic, building footprints, road alignment, blue-green network, or geographic construction phasing is proposed.

W KNOWN / UNKNOWN / WITHHELD

The map records evidence status; it does not allocate land or calculate development

KNOWN

- Taskbook text and counts
- Provisional repository polygons
- Laws and method boundaries

UNKNOWN

- Existing use and buildings
- Road/rail/accessibility conditions
- Ownership, utilities, heritage, ecology
- Users, actors, budget, baseline

WITHHELD

- Land-use mosaic
- Building footprints and demolition
- Road or blue-green alignments
- Geographic construction phasing

Technical 0 means no asserted polygon; it never means the real site has zero green or public space.

Evidence status, not approval. Dashed taskbook context does not locate any candidate site or route.

PROVISIONAL / CONDITIONAL / REVERSIBLE

THREE CANDIDATE AUDITS

Wudaokou, Qinghuadongluxikou, Beijing North

DECISION

An open phase, an approved overlapping project, and an ongoing construction area require different survey gates; none is a confirmed defect.

W THREE CANDIDATE AUDITS: STATUS BEFORE SITING

Candidate status is public evidence; route-level problems still require field research

ROUGH EXTENT / NOT A REDLINE

PROVISIONAL

A / WUDAOKOU

BRIEF

UNKNOWN

NEXT

OPTION

Status: Jing-Zhang Park Phase I is open

Unknown: exact route, permission, users, current defects

Next: confirm access and define one candidate origin-destination pair

Treatment: first observation candidate; no intervention assumed

B / QINGHUADONGLUXIKOU

BRIEF

UNKNOWN

NEXT

OPTION

Status: approved 2026 public-space project overlaps the topic

Unknown: exact works boundary, programme, baseline, current access

Next: coordinate and verify; do not duplicate approved work

Treatment: independent before/during/after evaluation candidate

C / BEIJING NORTH

BRIEF

UNKNOWN

NEXT

OPTION

Status: Jing-Zhang Park Phase II remains under construction

Unknown: works boundary, safe access, opening, permanent condition

Next: verify construction and safety before any field plan

Treatment: withdraw if access or comparability fails

Evidence status, not approval. Dashed taskbook context does not locate any candidate site or route.

PROVISIONAL / CONDITIONAL / REVERSIBLE

05

AI SCENARIO CARDS

Ten cards; AI organises evidence and accepts comparison

DECISION

Most tasks use ordinary tools. AI is tested against human coding for time, omission, dissent retention, privacy, and reliability.

W THREE CANDIDATE AUDITS: STATUS BEFORE SITING

Candidate status is public evidence; route-level problems still require field research

A / WUDAOKOU

- BRIEF** Status: Jing-Zhang Park Phase I is open
- UNKNOWN** Unknown: exact route, permission, users, current defects
- NEXT** Next: confirm access and define one candidate origin-destination pair
- OPTION** Treatment: first observation candidate; no intervention assumed

B / QINGHUADONGLUXIKOU

- BRIEF** Status: approved 2026 public-space project overlaps the topic
- UNKNOWN** Unknown: exact works boundary, programme, baseline, current access
- NEXT** Next: coordinate and verify; do not duplicate approved work
- OPTION** Treatment: independent before/during/after evaluation candidate

C / BEIJING NORTH

- BRIEF** Status: Jing-Zhang Park Phase II remains under construction
- UNKNOWN** Unknown: works boundary, safe access, opening, permanent condition
- NEXT** Next: verify construction and safety before any field plan
- OPTION** Treatment: withdraw if access or comparability fails

PROVISIONAL / CONDITIONAL / REVERSIBLE

Evidence status, not approval. Dashed taskbook context does not locate any candidate site or route.

WALKABILITY PROTOCOL

Multi-period observation before intervention

WALKABILITY AUDIT PROTOCOL

A repeatable route-level method; candidates and problem types remain hypotheses

BASELINES REQUIRED

Evidence status, not approval. Dashed taskbook context does not locate any candidate site or route.

DECISION

Status, route, effective width, detour, wait, obstacle, conflict, wayfinding, and desire lines precede any siting.

PROVISIONAL / CONDITIONAL / REVERSIBLE

ACTION CONTRACTS

Nine conditional actions with explicit rollback

DECISION

Every actor and budget is unconfirmed. One human-confirmed problem and one non-AI reversible pilot precede any AI comparison.

W WALKABILITY AUDIT PROTOCOL

A repeatable route-level method; candidates and problem types remain hypotheses

1 VERIFY CANDIDATE STATUS

Approved works, construction, access, recording permission, and safety.

2 OBSERVE MULTIPLE PERIODS

Peak, off-peak, evening, weekend; actual route and opening status.

3 CHECK WITH AFFECTED USERS

Record detour, wait, obstacle, discomfort, dissent, and desire lines.

4 HUMAN-CONFIRM THE PROBLEM

Located, repeatable, bounded, and supported beyond one report.

5 ONE NON-AI PILOT

No action → management → information → permitted temporary object.

6 MEASURE AND ROLL BACK

Same method before/after; remove on no benefit, harm, or no maintainer.

BASELINES REQUIRED

TRANSPORT

Exits, crossings, accessibility, logistics

BLUE-GREEN

Trees, water, heat, stormwater, maintenance

PUBLIC SERVICES

Facilities, opening, capacity, accessibility

BUILDINGS

Title, use, structure, fire, heritage

Evidence status, not approval. Dashed taskbook context does not locate any candidate site or route.

PROVISIONAL / CONDITIONAL / REVERSIBLE

METRICS

Candidates, hypotheses, observations, problems, and pilots stay distinct

W

AUDIT STATUS IS NOT A SITE FINDING

Candidate counts, hypotheses, observations, confirmed problems, and pilots stay distinct

UNKNOWN SITE METRICS

UNKNOWN Existing land use and buildings	UNKNOWN FAR, density, height, setbacks
UNKNOWN Road, station, accessibility, parking	UNKNOWN Green, public-space, heat and stormwater baselines
UNKNOWN Utility and public-service capacity	UNKNOWN Actor permission, budget, operation and maintenance

Green/public-space QA ratio = 0 only because no claimable polygon is asserted. Actual conditions are unknown.

Evidence status, not approval. Dashed taskbook context does not locate any candidate site or route.

DECISION

Three candidates and five hypotheses coexist with zero confirmed problems, zero field records, and zero implemented pilots.

PROVISIONAL / CONDITIONAL / REVERSIBLE

RISK + HANDOFF

No approval, procurement, investment, or operating claim

AUDIT STATUS IS NOT A SITE FINDING

Candidate counts, hypotheses, observations, confirmed problems, and pilots stay distinct
