Figure 1. Schematic representation of the experimental design. The first part of the experiment consisted of a pretest phase during which participants were familiarized with the stimuli and the task. The second part of the experiment consisted of two main phases: a training phase and a test phase. The training phase was divided into three sub-phases: a baseline phase, a learning phase, and a transfer phase. The test phase was also divided into three sub-phases: a baseline phase, a learning phase, and a transfer phase. The third part of the experiment consisted of a post-test phase during which participants completed a series of tests to assess their performance.
