

THE NEW HUNDRED TRADES

Urban Design for the Centennial Jing-Zhang AI Belt · Conceptual Suggestion

On a hundred-year-old line, the roster of trades has grown longer; the new trades must find their place on this street.

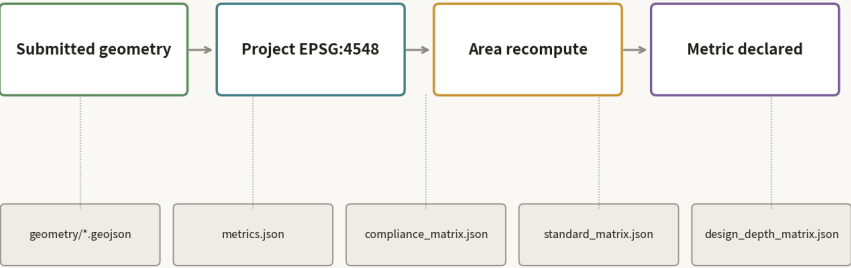

tianye-GD · open call submission

Overall Concept and Figure

The scroll of Along the River During the Qingming Festival is the representational model: many trades active at once along one line, depicting work rather than scenery. The name comes from the Kaogongji - those who create things are called gong, and the artisan lays out the capital. In Chinese, gong directly means the one who builds the city. The 1909 railway was the work of a hundred trades; a century later the same line carries algorithm engineers, developers and agents. One line, two generations of trades.

Evidence Chain and Submission Package

The New Hundred Trades - Jing-Zhang AI Belt

Provisional surrogate boundary - not an official red line - recompute on official data

Evidence Chain

Position: Do Not Redo the Line

Phase two of the Jing-Zhang Rail Park opened in August 2026, connecting the full 9 km. Turning the rail heritage into a green corridor is an accomplished fact. This proposal therefore does not redo the line; it thickens it at five points only: three ring-road crossings lifted into bridge-markets, Dazhongsi sunken against noise, Zhongzhiyuan stacked as a proving ground. The line stays predominantly flat.

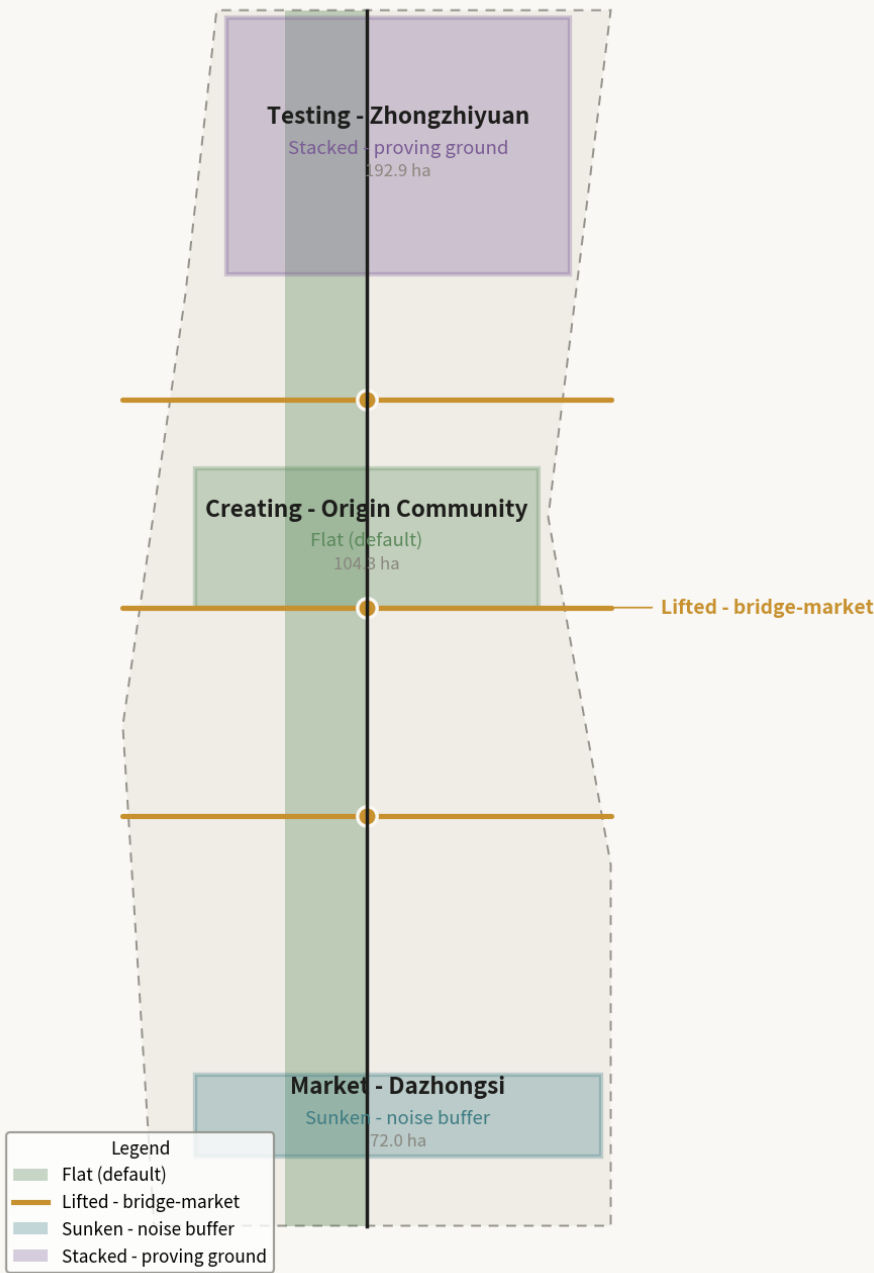

Three-Level Scope and Land Use Structure

Section Rule: Flat by Default

Flat (default): unconflicted stretches, ground-hugging, stitching both sides. Lifted (trigger: ring-road crossings): North 3rd, North 4th, Qinghua East Road, keeping 9 km unbroken. Sunken (trigger: adjacency to at-grade rail): Dazhongsi, buffering noise and sightlines. Stacked (trigger: least-constrained key area): Zhongzhiyuan proving ground. States are assigned by site condition, not composition, so the line stays recomputable and explainable.

Key Areas - Creating, Testing, Market

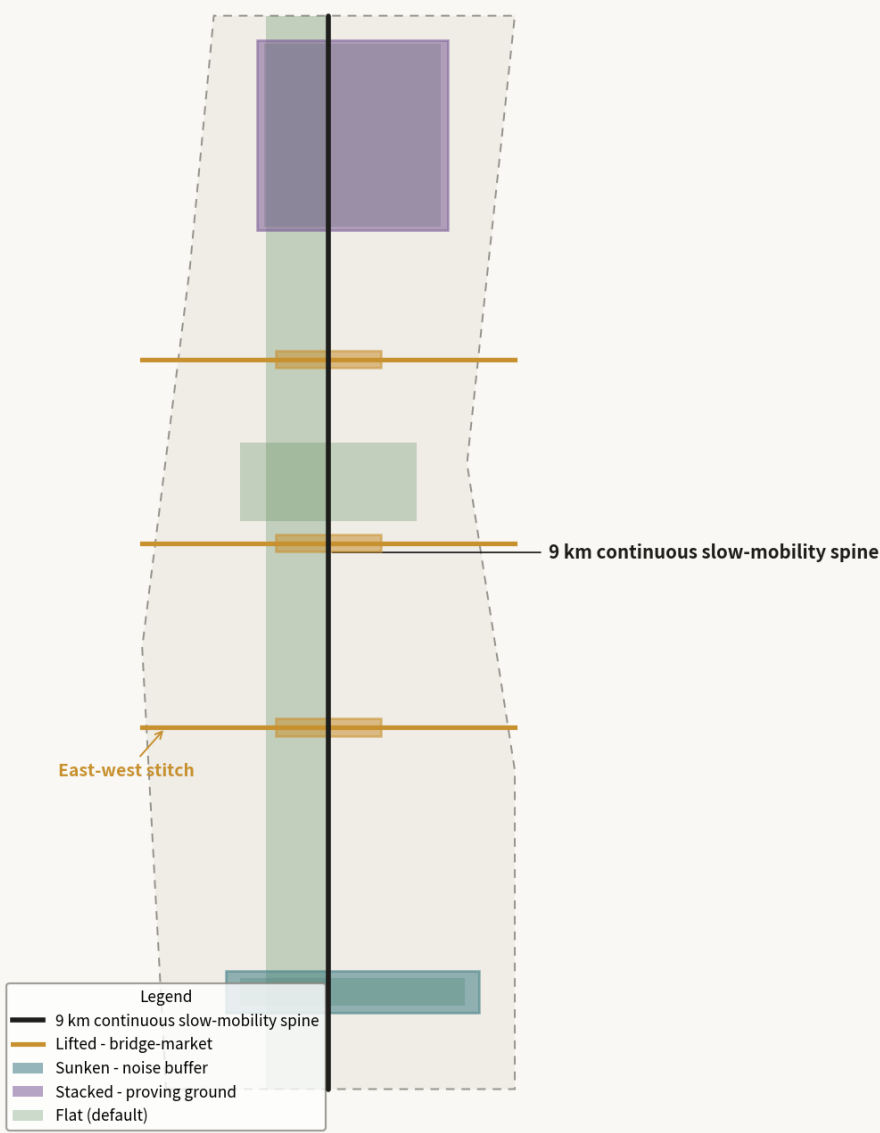

Key Area Structure

Industrial Ladder: Growing From the Middle

Creating (Origin Community, centre, original research) - Testing (Zhongzhiyuan, north, pilot validation) - Market (Dazhongsi, south, commercialisation). The 9 km spine is the conveyor between rungs: a team starting at Creating, going north to Test, then south to Market, travels the same line.

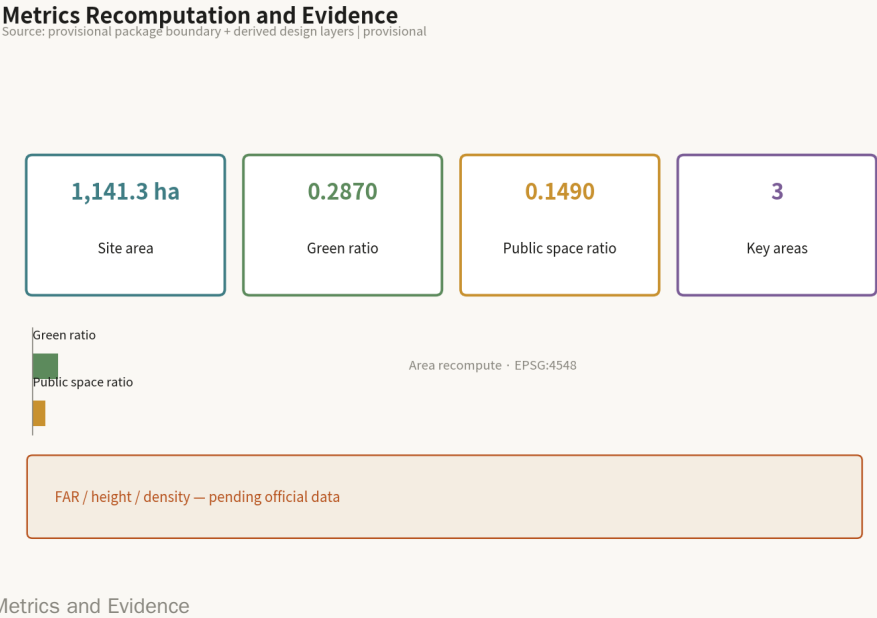

Mobility and Blue-Green Public Space

Mobility and Blue-Green

Sharing the Frame, Not the Right-of-Way

The centre of each bridge deck is given to dwelling and market use; machines run on an edge lane. Approach ramps meet accessibility standards and are shared by wheelchairs and wheeled robots - the Cheonggyecheon retrofit lesson inverted, so one investment resolves both human access and machine right-of-way.

Trade Cards and Human Review

Twelve trade cards, three of them AI industry test and validation scenarios. Each states section, users, technology, operator, and human review boundary. Overall principle: sensing coverage must be published; no personal identification in public areas; disposition and enforcement decided by humans; any test stoppable on site.

Three Pilgrimage Landmarks

Switchback Terrace (top of the stacked deck, named for the Qinglongqiao switchback - forced to climb then, deliberately manufacturing level change now); Bridge-market at the North 4th Ring (the busiest point); Trades Stele (sunken court, an honour frontage of open-call contributor identifiers, answering the colophons and seals of a handscroll).

Risk and Boundaries

This is a conceptual suggestion, not statutory planning, and constitutes no approval, implementation or investment commitment, and no bridge/tunnel or engineering feasibility conclusion. Official polygons are unreleased; geometry uses a provisional surrogate boundary and must be recomputed. Gentrification and displacement risk is flagged with a suggestion to make protections audit able.
