

The Proving Ground · Evidence chain and package structure

Centennial Jing-Zhang AI Innovation Belt · overall design area 11.4 sq km

Source: repository provisional boundary (official_boundary=false, geometry_role=provisional_constraint). Areas recomputed in EPSG:4548. Provisional geometry is not an official redline; layers must be recomputed once official data is released. Conceptual suggestion, not statutory planning.

Scope levels and land-use structure

Partition residual 93.8 m² (0.00082%), no gaps or overlaps

Centennial Jing-Zhang AI Innovation Belt · Concept and graded validation environments

Concentrating green space into a line yields corridor, continuity and one shared observation section

All area metrics recomputed from submitted geometry in EPSG:4548, not copied from text

Zhan Tianyou's real legacy on this line was not the zigzag but standardisation: the 1435 mm gauge, the automatic coupler, the Jing-Zhang Standard Drawings, and the Chinese Institute of Engineers whose first stated purpose was to define construction standards.

The 11.4 sq km area is designed as a city-scale AI proving ground: a 9.66 km Baseline as one shared observation section, and three key areas as L1 closed proving ground, L2 semi-open pilot and L3 open deployment. Promotion depends on a published baseline, not approval.

Site area	11.413 sq km
Baseline length	9.66 km
Green ratio	15.33%
Public space ratio	3.94%
Metrology nodes	5
Key-area share	32.4%
Partition residual	93.8 sqm
Metric status	37 / 44
