Three-Node Index with Differentiated Design Tasks

PROVISIONAL boundary • not an official redline • recalculate after official data • AI-enhanced content is never presented as original footage

Three-Node Index with Differentiated Design Tasks

PROVISIONAL boundary • not an official redline • recalculate after official data • AI-enhanced content is never presented as original footage

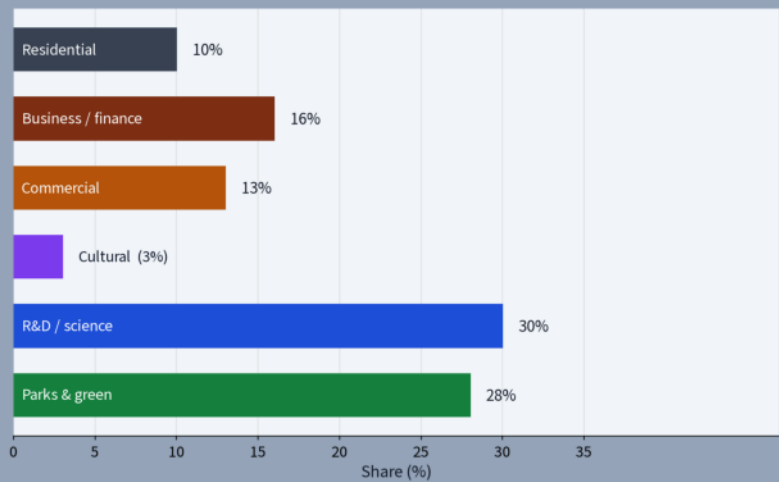

Three nodes differentiated by the three key areas: Zhongzhiyuan, Beijing AI Origin, Dazhongsi; conceptual sites pending official boundary confirmation.

Conceptual Structure (single recompute caliber) + Core Metric Evidence (single caliber)

PROVISIONAL boundary • not an official redline • recalculate after official data • AI-enhanced content is never presented as original footage

Conceptual Land-Use Structure (single recompute caliber)

Core Metric Evidence (single caliber • recompute trigger)

geometry layer -> formula recompute -> reduced-precision display (provisional)

Metric	Formula / source (conf)	Displayed value (reduced)	Recompute trigger
site_area_sqm	polygon area (provisional, EPSG:4548) conf: medium	about 11.4 km² (11,412,825 m²)	on official geometry
green_ratio	green_space_area / site_area conf: low	0.13 (about 13%)	on official green-line data
public_space_ratio	public_space_area / site_area conf: low	0.0035 (about 0.4%)	on official land-use data
persona_count	text-count: 8 persona groups conf: high	8	on persona update
scenario_card_count	text-count: 12 scenario cards conf: high	12	on scenario update
global_case_count	text-count: 6 benchmark cases conf: high	6	on case update

All displayed values are reduced-precision concept calibers (participant provisional model data, not authoritative); ratios and counts use separate axes; this is an evidence chain, not a value comparison.

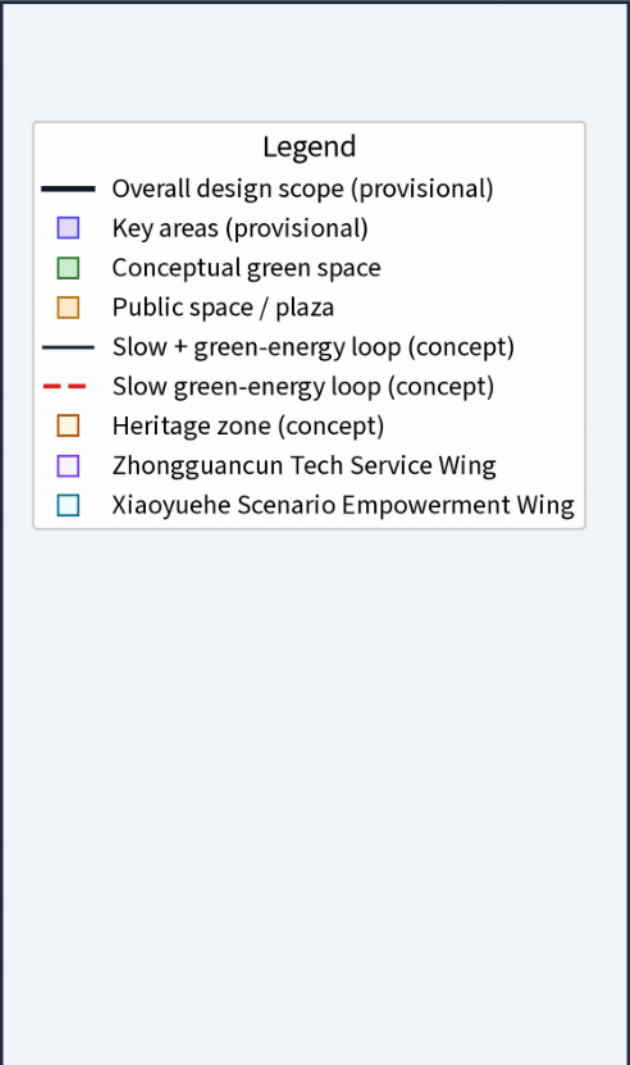

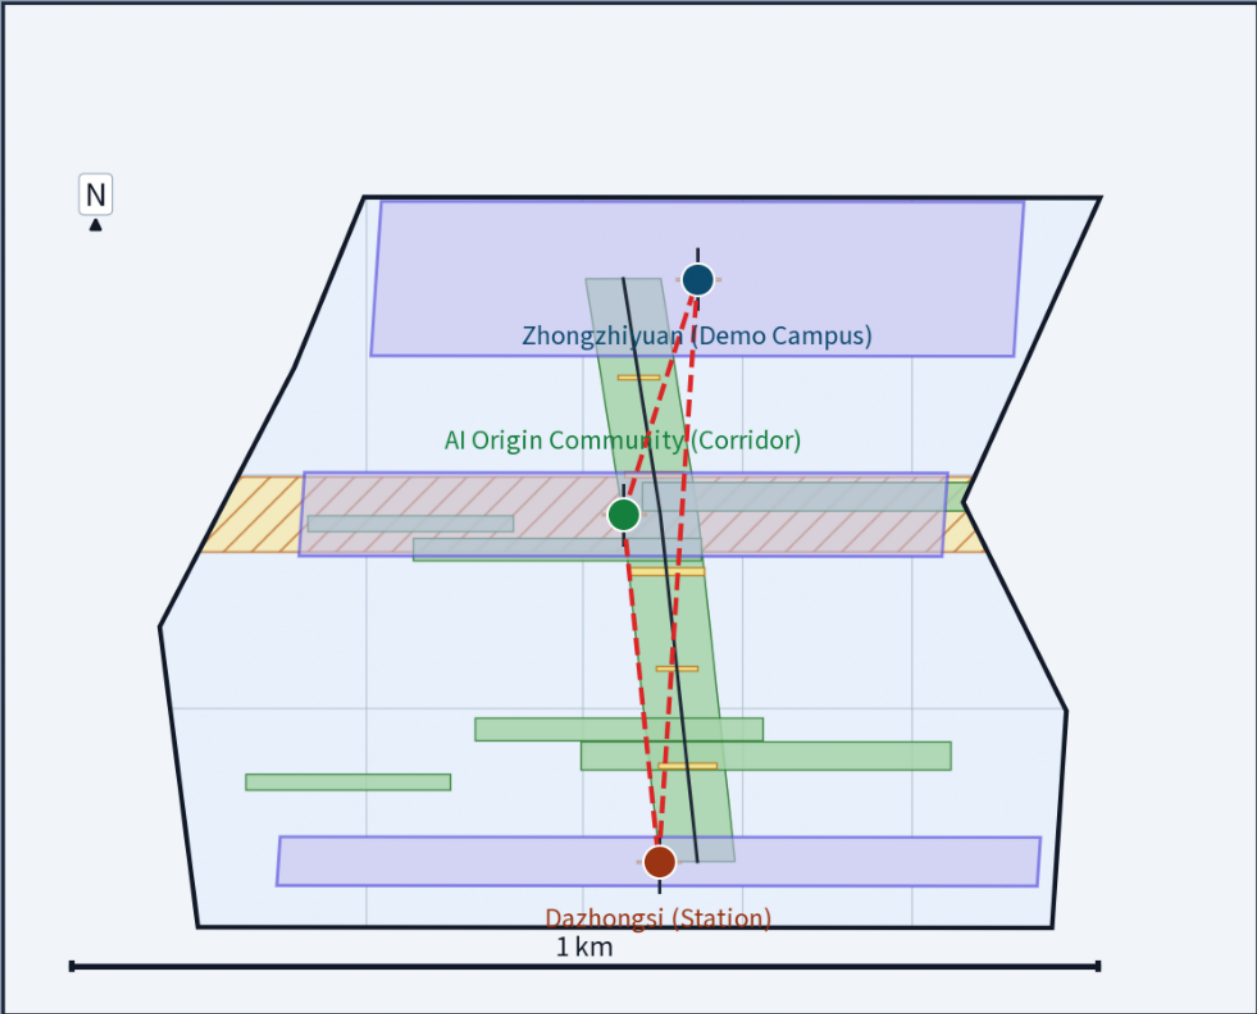

Overall Design Overview - GREEN.JZ

PROVISIONAL boundary • not an official redline • recalculate after official data • AI-enhanced content is never presented as original footage

PROVISIONAL boundary • not an official redline • recalculate after official data • AI-enhanced content is never presented as original footage

Overall Design Overview - GREEN.JZ

Coordinated research • 43.6 km² (announce) | Haidian main • 11.4 km² (announce) | Key areas • 368.4 ha (announce)

Geometry based on the package's provisional polygons; not an official redline; recalculate when official data is published.
