

UNDER-VIADUCT LOOP UNDER • JZ

Revival of Space under Elevated Rail & Urban Stitching (Concept)

- One Hall, One Path, One Market: Hall, Green Path, Market Yard (three nodes)
- Five AI+ scenarios x 10 cards + 3 industry test protocols (anonymised + human review + stop conditions)
- Five mechanisms: usage list & access, time-shared booking, reversible-build guide, charter, annual evaluation
- Benchmarking six global under-viaduct cases (public-channel mechanism summaries only)
- Brand/identity, regional interfaces (Beiwei / Future Science City / Huairou / E-Town / Jing-Jin-Ji), annual programmes

Official three-tier scope (announcement text): Coordinated Research approx. 43.6 km2

Overall Design approx. 11.4 km2

Key areas approx. 368.4 ha (self-computed, not officially issued)

This package: conceptual under-viaduct segments in the Overall Design scope (provisional geometry)

All content is participant provisional model data: not official planning, approval or commitment; geometry provisional, recomputed on official data release.

Three-Node Conceptual Design (Zhongzhiyuan / AI Origin / Dazhongsi)

Time-shared market; mobile stalls, light canopies, folding seats; time-slot control & charter; pilot space for matchmaking and noise AI

Prerequisite: clearance/structure review, rail-protection check, ownership, fire & accessibility survey before any implementation; all dimensions to verify.

Five AI+ scenarios x 10 cards + 3 industry test protocols

A1 Safety monitoring AI Anonymised crowd aggregation & anomaly alerts; human review only, no individual-identifying tracking	A2 Space booking AI Time-shared booking suggestions & conflict hints; staff confirm
A3 Lighting-saving AI Crowd-triggered lighting advice; manual & timed baseline kept	A4 Event matching AI Public event aggregation & draft recommendations; reviewed before publishing
A5 Noise control AI Time-slot noise aggregate alerts; advisory only, no automated enforcement	A6 Parking & transfer guidance AI Non-motorised parking & transfer info aggregation (concept, pilot)
A7 Market operations assistant AI Stallholder public dashboard & ledger drafts (human reconciled)	A8 Facility repair reporting AI Repair triage & dispatch drafts (human confirmation)
A9 Accessibility info AI Large-print/voice bilingual info & escort relay (human fallback)	A10 Event capacity advisory AI Event capacity trend alerts (advisory only)

Industry tests (B1-B3): hypothesis -> data contract -> baseline eval -> error stratification -> runtime monitoring -> public report (narrative)

All AI outputs are advisory drafts; key decisions human-reviewed; anonymised data; no individual-identifying collection; immature tech not claimed as deployed.

Metrics Recalculation, Implementation, Risk & Compliance

- Site approx. 11.4 km2 (recomputed from package geometry EPSG:4548, not officially issued; recompute on official release)
- green_ratio approx. 0.118, public_space_ratio approx. 0.004 (provisional, low confidence, reduced-precision display only)
- Counts match proposal.md: cases 6, cards 10, tests 3, personas 7, landmarks 3, nodes 9, programmes 3
- Land use single caliber: 8 classes (11.3% / 26.8% / 8.1% / 2.4% / 4.4% / 15.7% / 9.1% / 22.1%), formula in narrative
- Implementation matrix: pilot criteria / actors (lead+collaborate) / professional checkpoints / community participation / privacy & accessibility checks / maintenance / cost classes (qualitative L-M-H) / KPIs / complaints / escalation / stop conditions (narrative)
- Brand prior rights: before trademark search completes, all names/marks are internal working codenames, restricted from external registration/use
- No investment-attraction, policy or funding promises; no proposed government bodies (wording: future data & computing coordination mechanism, concept)
