

THE CIVIC EXCHANGE YARD

1 TRACK · 3 YARDS · 4 SPURS · 12 TOUCHPOINTS

The marshalling logic of a century-old railway becomes a public-space protocol for an AI district

CONCEPT & EVIDENCE LIMIT

■ CONCEPT & EVIDENCE LIMIT

One Heritage Exchange Track, three yards, four public spur types, and twelve touchpoints form an auditable network. Provisional boundaries support concept and internal recalculation only; they are not statutory redlines.

■ PUBLIC RETURN

Accessible hours, open documents, supervised service, and environmental improvement.

■ STOP RULE

Pause after a safety incident, unexplained data use, missing owner, or undelivered public return.

■ DEPENDENCY

Official polygons, statutory controls, ownership, utilities, fire, flood, and heritage review.

11.4 km²

OVERALL: SPATIAL NETWORK

3 KEY AREAS

DETAIL: PUBLIC INTERFACES

Provisional rough boundaries support concept generation and open discussion only; they are not statutory, ownership, or engineering data.

THREE SCOPE LEVELS

THREE SCOPE LEVELS

The 43.6 km² research layer defines exchange rules; 11.4 km² organises a spatial network; three key areas test public interfaces. The Ticket binds inputs, returns, owner, data boundary, and stop conditions.

PUBLIC RETURN

Accessible hours, open documents, supervised service, and environmental improvement.

STOP RULE

Pause after a safety incident, unexplained data use, missing owner, or undelivered public return.

DEPENDENCY

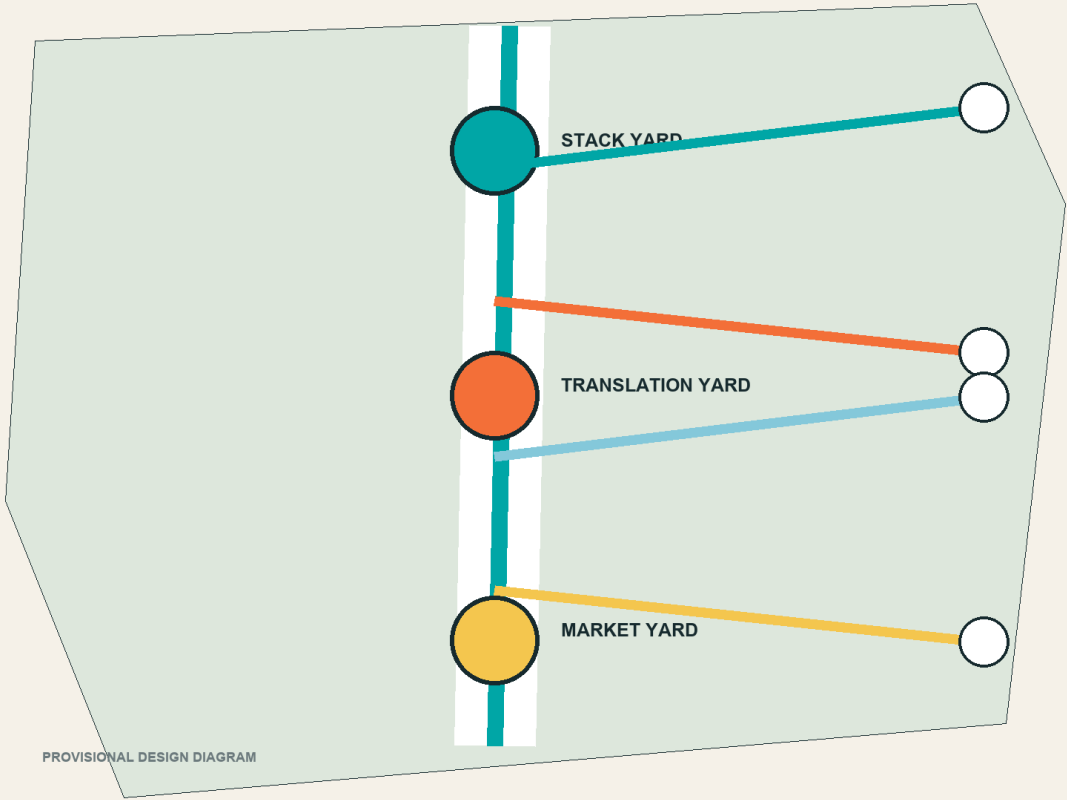

Official polygons, statutory controls, ownership, utilities, fire, flood, and heritage review.

1 TRACK · 3 YARDS · 4 SPURS

The Public Exchange Ticket turns an industry network into an auditable reciprocal system

THREE EXCHANGE YARDS

THREE EXCHANGE YARDS

Zhongzhiyuan validates stack capabilities, AI Origin translates research, and Dazhongsi tests city applications. Each yard has a Quiet Zone, Trial Zone, staffed service, and public results interface.

PUBLIC RETURN

Accessible hours, open documents, supervised service, and environmental improvement.

STOP RULE

Pause after a safety incident, unexplained data use, missing owner, or undelivered public return.

DEPENDENCY

Official polygons, statutory controls, ownership, utilities, fire, flood, and heritage review.

THREE EXCHANGE YARDS

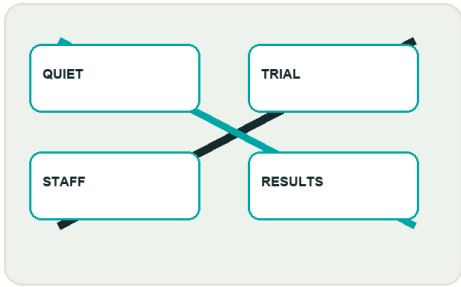

One protocol, three urban conditions, twelve operating touchpoints

MOBILITY & BLUE-GREEN

MOBILITY & BLUE-GREEN

Repair continuous walking, crossings, shade, accessibility, and staffed service before digital equipment. Physical signs and staff preserve basic service when systems go offline.

PUBLIC RETURN

Accessible hours, open documents, supervised service, and environmental improvement.

STOP RULE

Pause after a safety incident, unexplained data use, missing owner, or undelivered public return.

DEPENDENCY

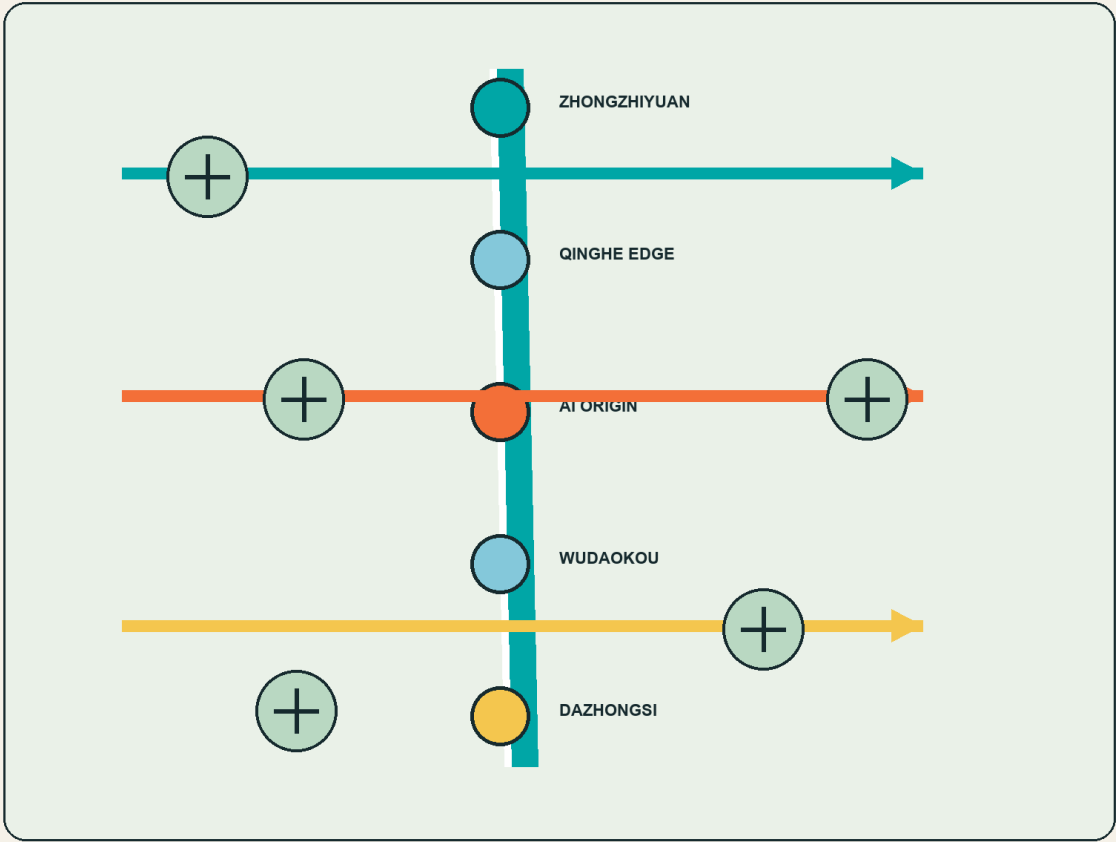

Official polygons, statutory controls, ownership, utilities, fire, flood, and heritage review.

IMPLEMENT & GOVERN

■ IMPLEMENT & GOVERN

Months 0–18 test operations and reversible fixtures. Months 18–36 adapt with evidence and confirmed controls. The long term establishes cross-yard exchange and public-return audits. Structural work needs separate review.

■ PUBLIC RETURN

Accessible hours, open documents, supervised service, and environmental improvement.

■ STOP RULE

Pause after a safety incident, unexplained data use, missing owner, or undelivered public return.

■ DEPENDENCY

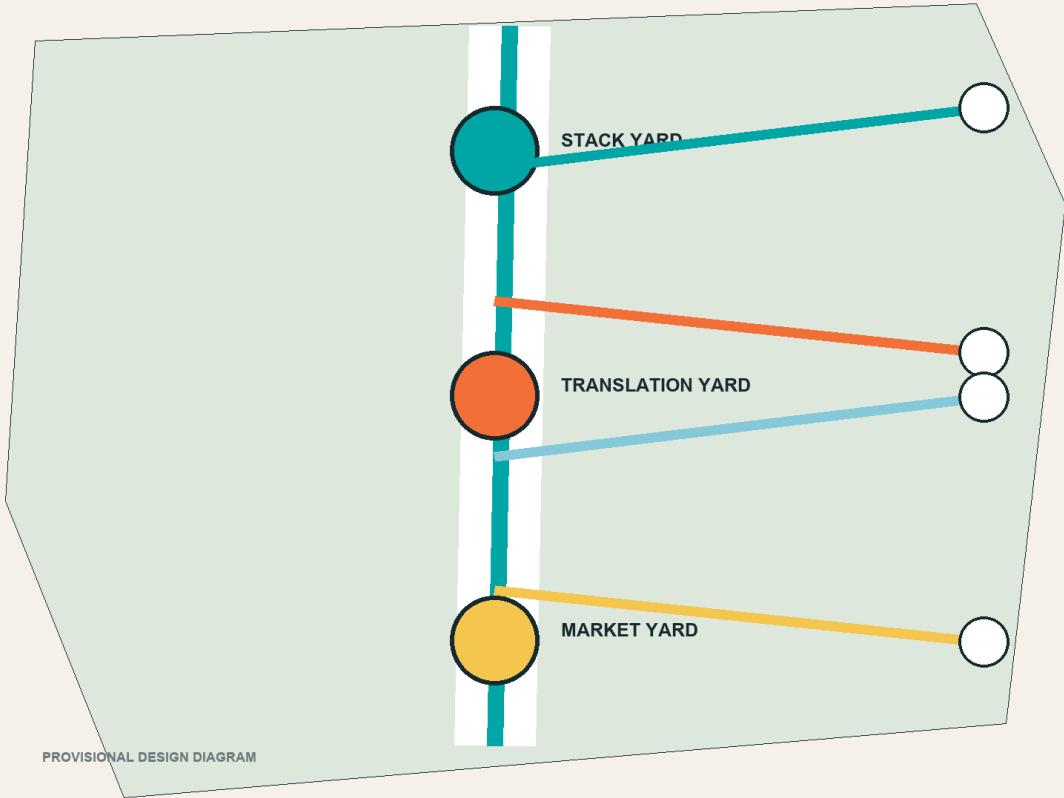

Official polygons, statutory controls, ownership, utilities, fire, flood, and heritage review.

METRICS & RISK

METRICS & RISK

GeoJSON recalculates spatial values; operating performance is not fabricated; FAR, height, redlines, utilities, fire, and ownership stay pending. Safety, privacy, public capture, and maintenance all have pause rules.

PUBLIC RETURN

Accessible hours, open documents, supervised service, and environmental improvement.

STOP RULE

Pause after a safety incident, unexplained data use, missing owner, or undelivered public return.

DEPENDENCY

Official polygons, statutory controls, ownership, utilities, fire, flood, and heritage review.
