

JING-ZHANG CIVIC LOOP

An AI innovation belt for everyday civic services

Continuous passage, staffed help, no-account alternatives, exit and appeal come before explainable AI.

Concept experience image; not a photograph, exact site view, approved plan or completed construction.

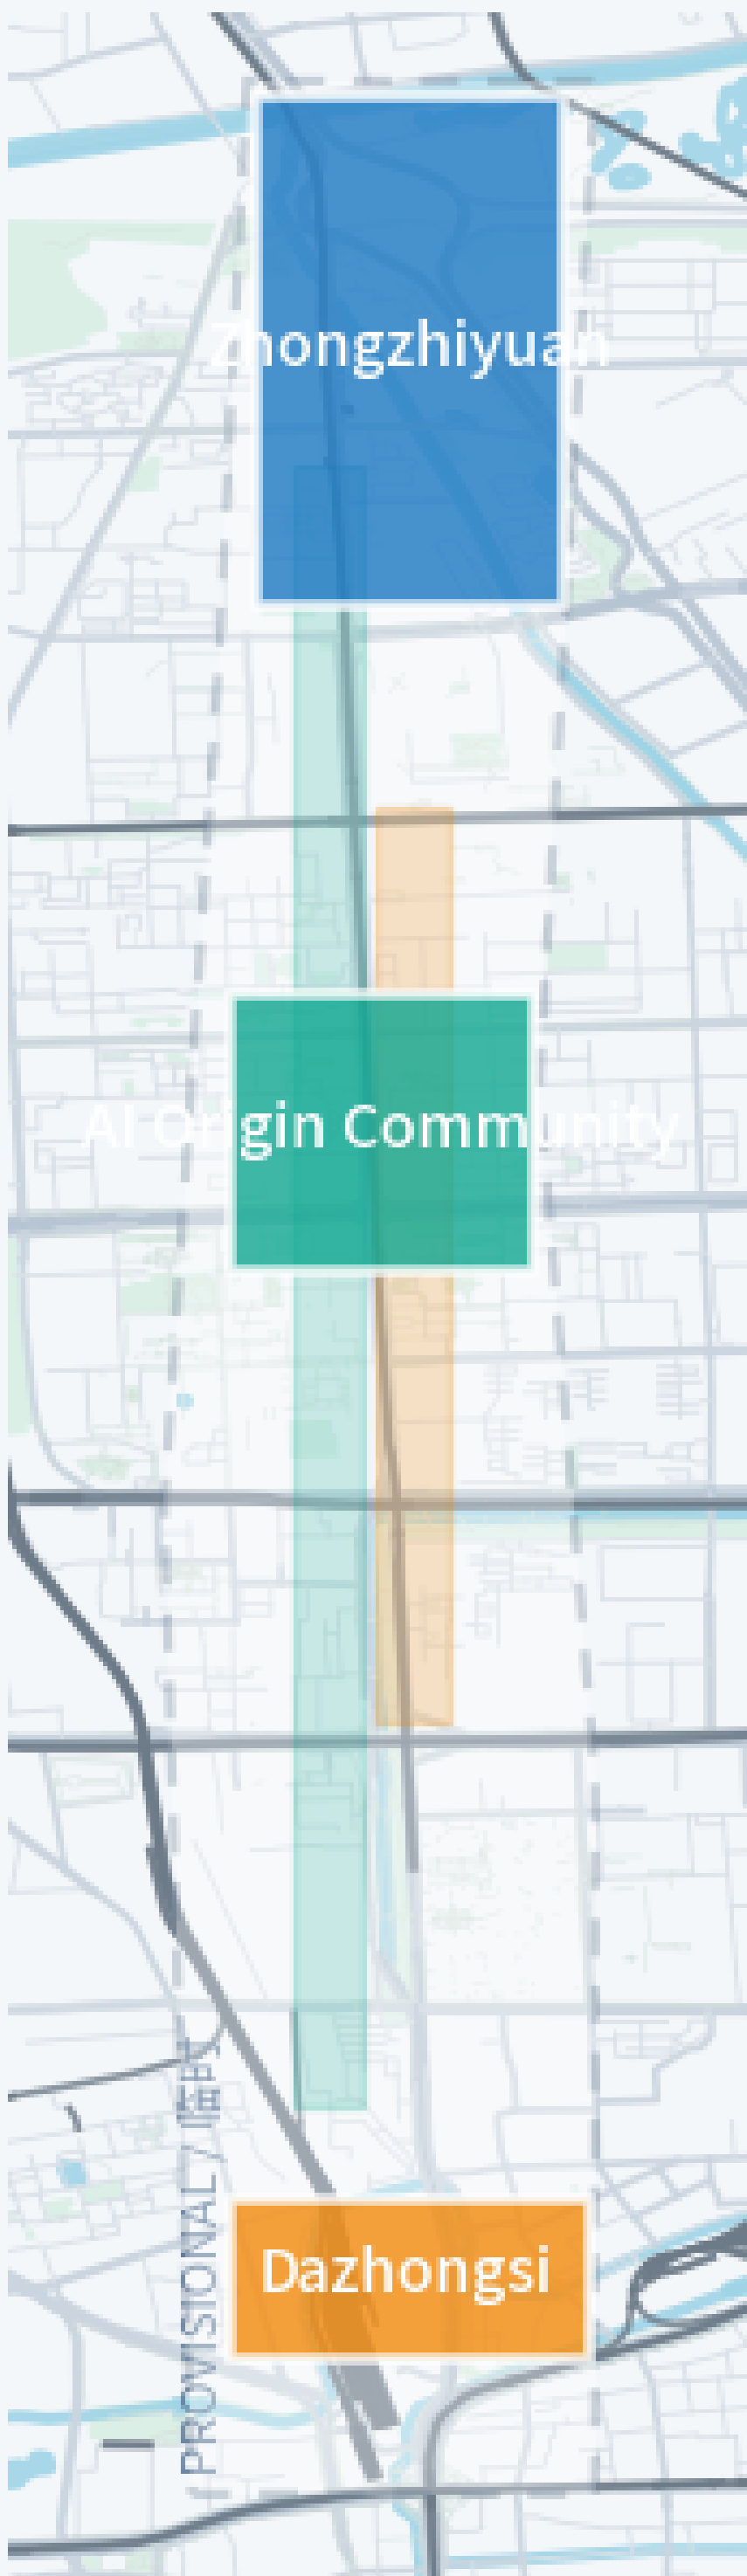

Three scope levels and spatial evidence

Public urban fabric is context only; provisional extents stay dashed

JING-ZHANG CIVIC LOOP

Three scope levels on one spatial evidence map

Public urban fabric is context only; provisional extents stay dashed and the three nodes keep their relative positions

43.6 km² Coordinated research

Industry, culture, talent and regional networks

11.4 km² Overall design

Renewal, civic spine, mobility, blue-green and services

368.4 ha Three key areas

Controlled testing, near-campus collaboration and a civic industry interface

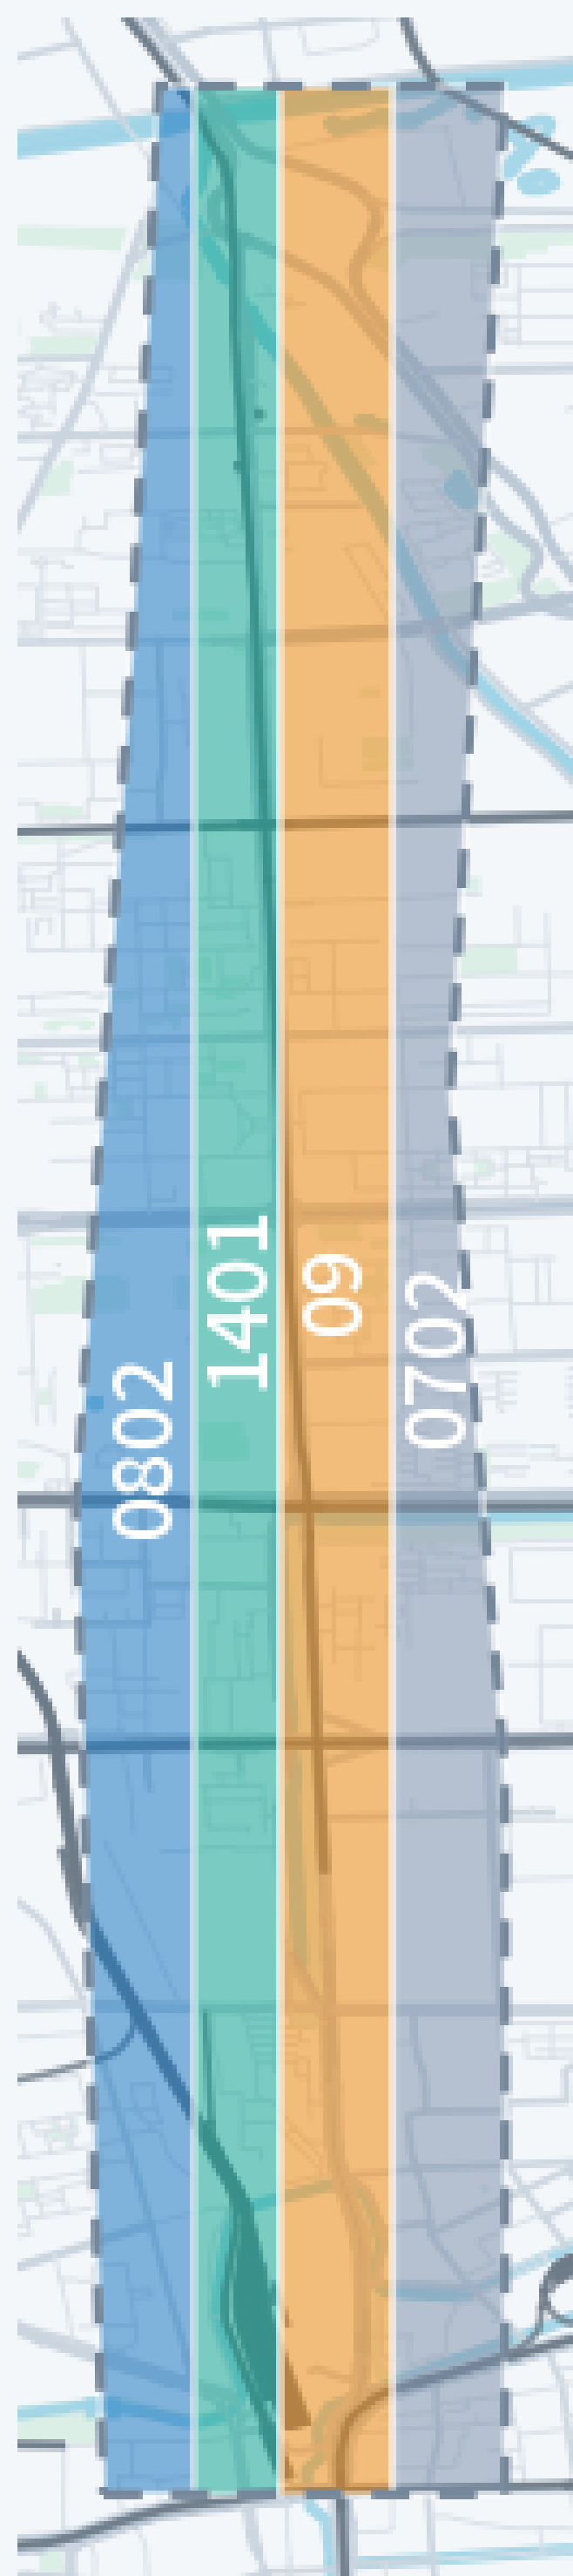

Land-use classes and civic services

Code 09 is corrected; programme mix does not impersonate statutory classification

JING-ZHANG CIVIC LOOP

Correct land-use classes before mixed civic services

Codes follow the national classification; programme mix is a design note, not statutory control

0802 Research land

AI R&D and open collaboration; parcel and control confirmation pending

1401 Park green space

Continuous walking, shade, rest and accessible service

09 Commercial and service land

Industry support is a programme note; code 05 (wetland) is no longer misused

0702 Community-service support

Staffed help, daily life and non-AI access

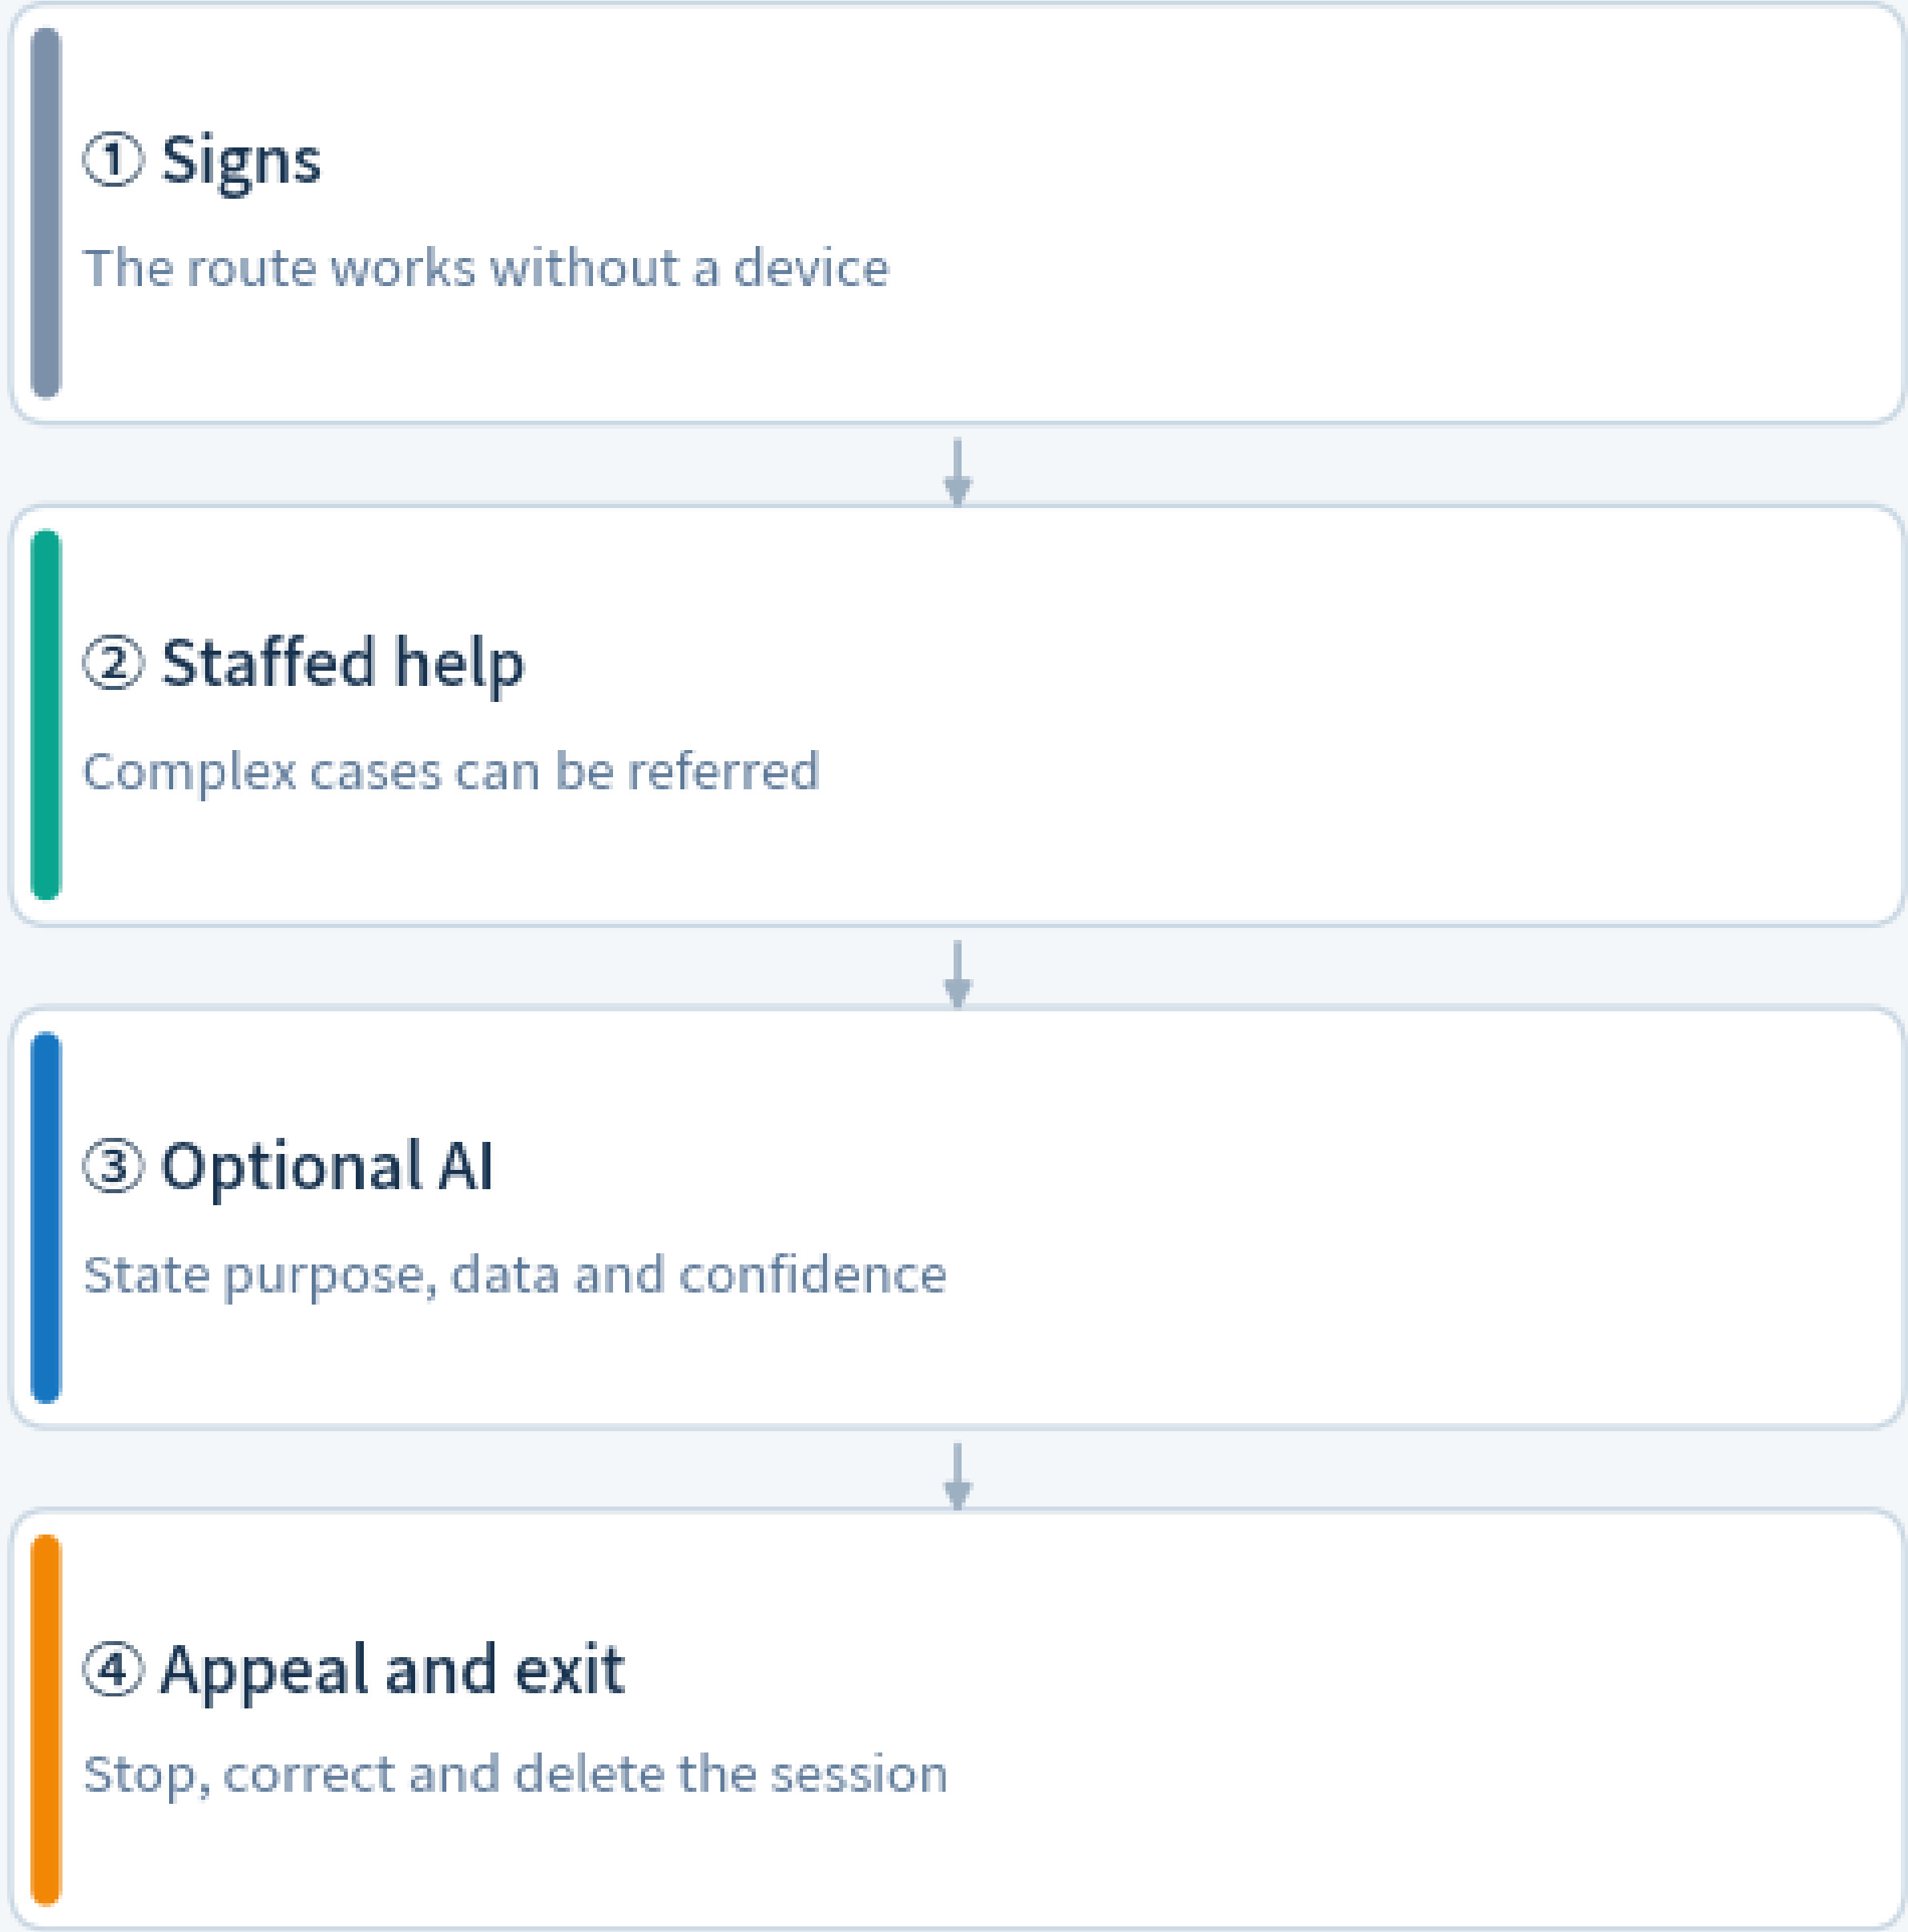

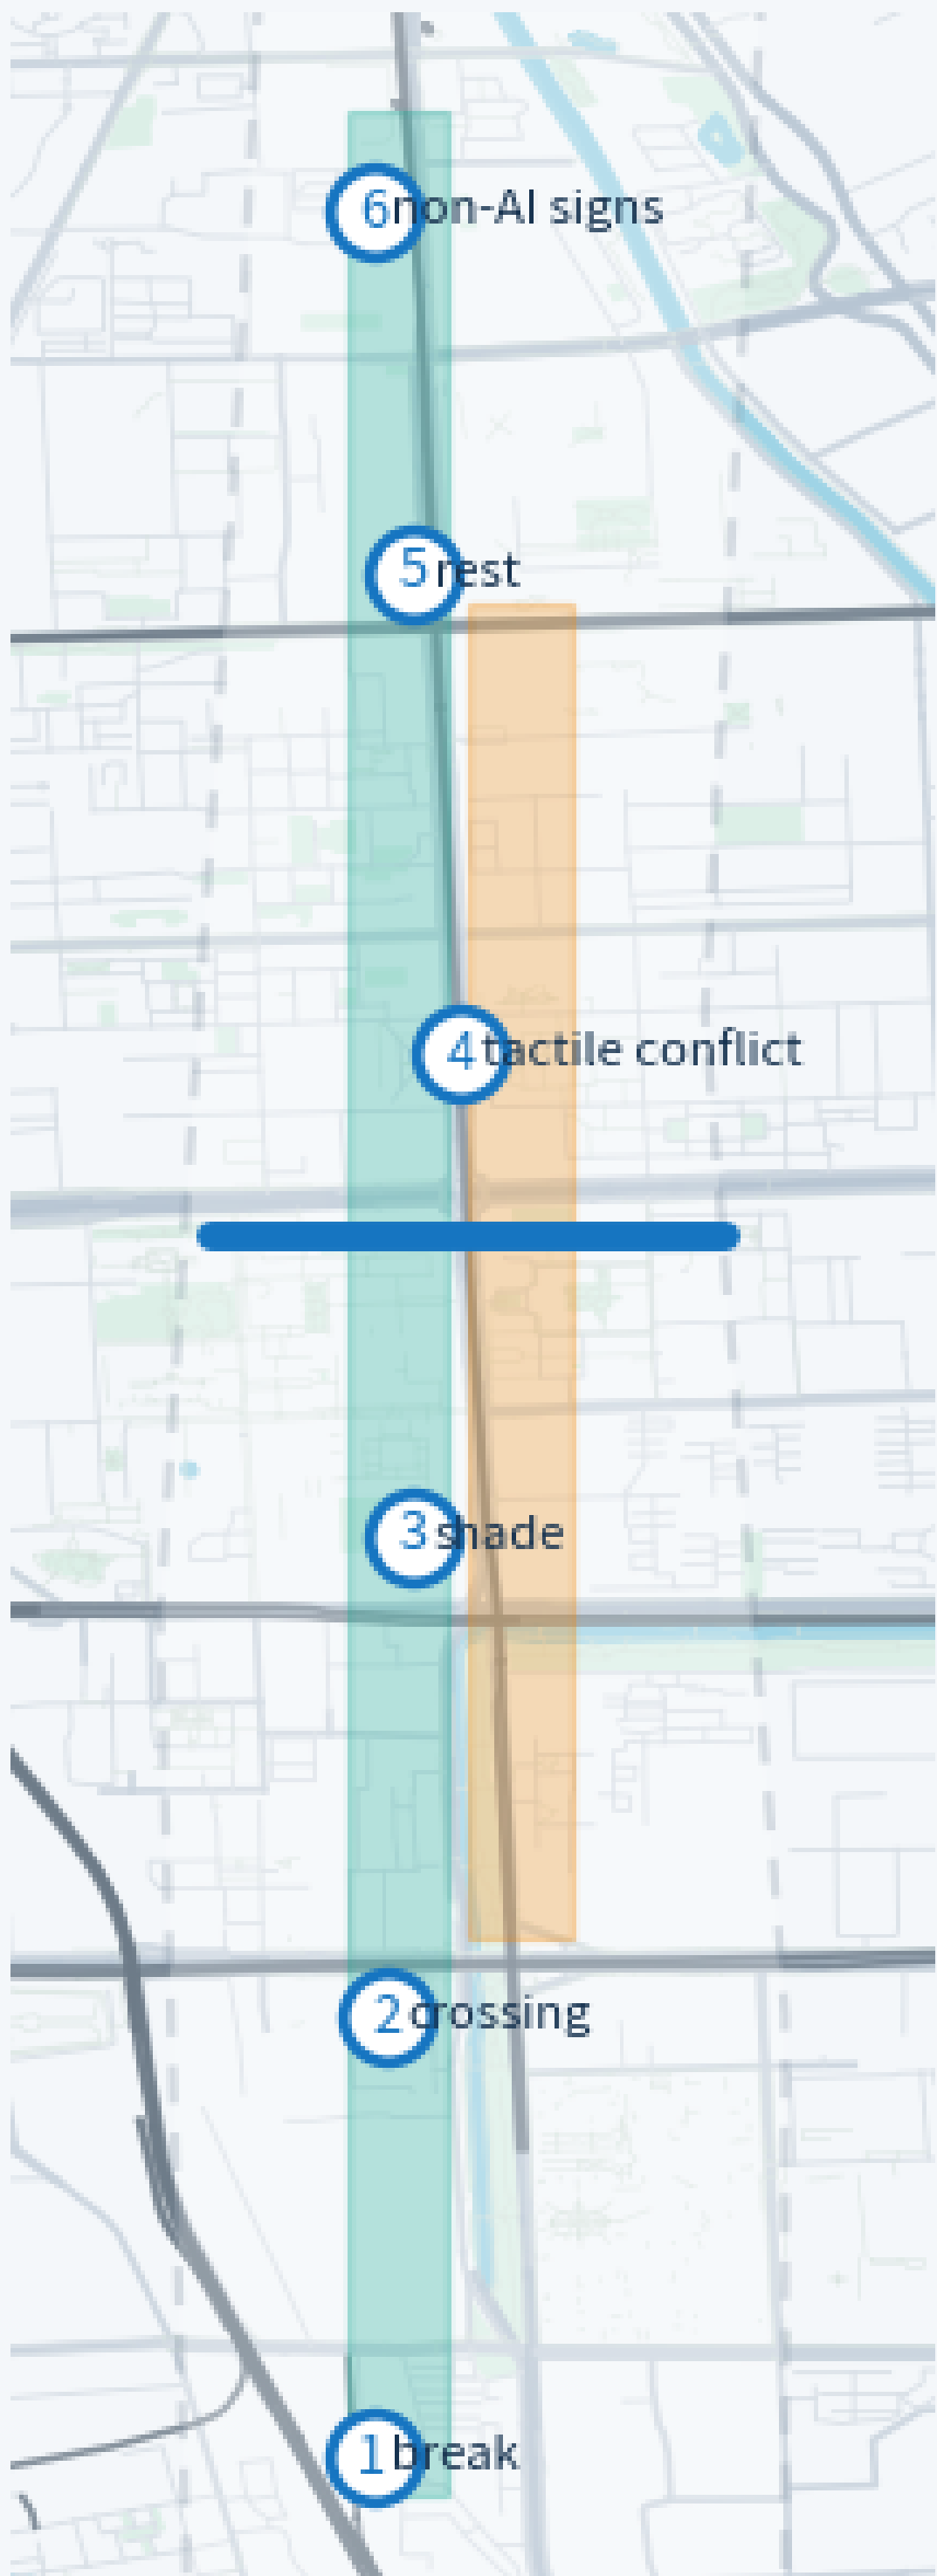

Continuous passage first

Signs, staff, optional AI, appeal and exit form one complete path

JING-ZHANG CIVIC LOOP

Repair continuous passage before adding withdrawable AI

Six walking audits are mapped; paper wayfinding and staffed help remain parallel

Operating contracts for three key areas

T1 civic service, T2 controlled sandbox, T3 rights-cleared display

JING-ZHANG CIVIC LOOP

Three key areas, three distinct operating contracts

Each area states the ordinary path, AI increment, entry gate and stop condition

Zhongzhiyuan • T2 controlled sandbox

Ordinary: staffed benchmark and offline equipment notes
AI: edge-model, energy and recovery comparison
Gate/stop: isolated plan and authority; stop on boundary breach or failed recovery

AI Origin Community • T1 civic service

Ordinary: paper signs, staffed desk and no-account access
AI: explainable guidance and service triage
Gate/stop: accessibility and privacy review; stop if any group is blocked

Dazhongsi • T3 rights-cleared display

Ordinary: staffed rights check and in-person explanation
AI: synthetic-data permission, withdrawal and audit demo
Gate/stop: item-level clearance; stop if withdrawal or audit fails

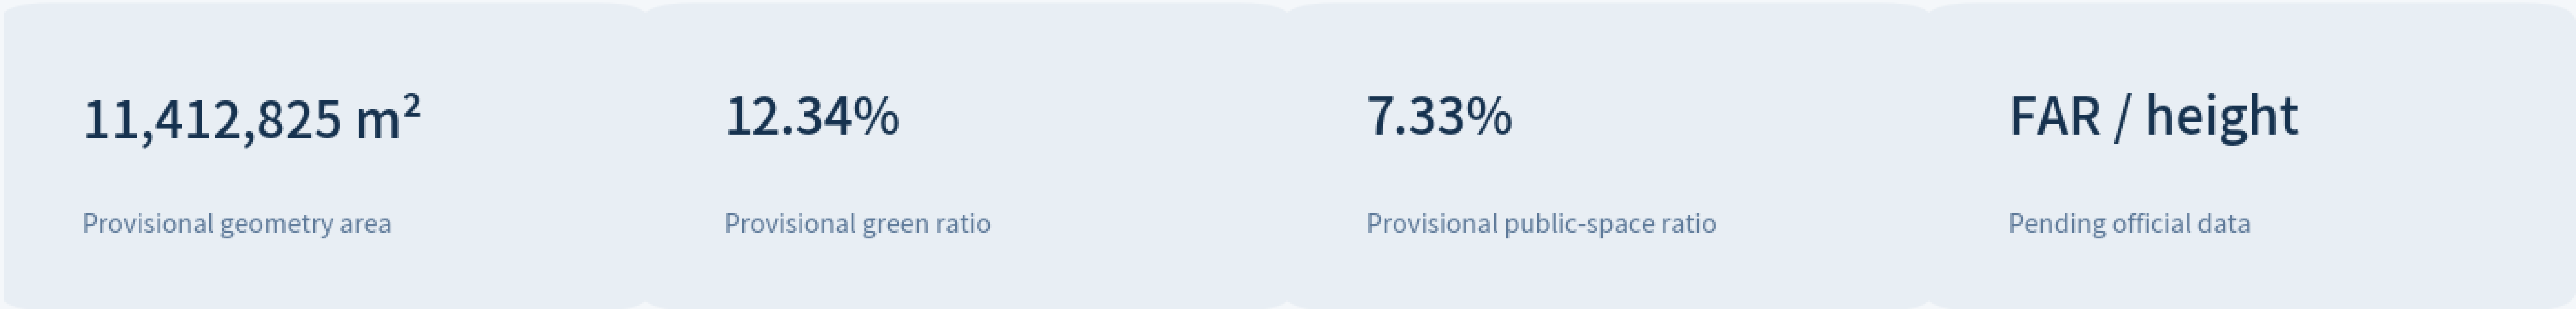

Metrics, evidence and review

Retain, revise or retire; presentation never substitutes for evidence

JING-ZHANG CIVIC LOOP

A metric advances only when its evidence chain closes

Facts, provisional geometry, design and stop conditions stay separate; four gates review the claim

Retain / revise / retire; presentation never substitutes for evidence

Concept proposal • provisional geometry • not a statutory plan or implementation approval

Implementation gates, risk and exit

Every phase can stop while ordinary civic service remains usable
