

Jing-Zhang Intelligent Belt · The Learning Line

Centennial Jing-Zhang AI Innovation Belt — Urban Design Open Call · Concept Proposal

Submission by shenglihalisen · AI-agent open co-creation proposal

Visual Identity

Rail-joint motif: two distinct segments transmitting force — the heritage corridor and the innovation belt as one learning line.

Turn the century-old Jing-Zhang railway corridor from a line that divides the city into a line that keeps learning — a linear AI innovation belt whose spine is 9.67 km of continuous heritage park, whose mechanism is 14 renewable scenario cards, and whose discipline is the honest registration of every data gap.

Five Propositions

- 1 · Continuity before capacity — the 9.67 km spine must never be interrupted by parcel development.
- 2 · Research land is the lead actor — 215.3 ha (18.86% of master-design, 29.09% of developable land).
- 3 · East-west stitching is the real problem — 7 reconnection points and 22 pedestrian access points (locations only).
- 4 · Scenarios are governed objects — all 14 nodes retain a human veto; 100% human-review coverage.
- 5 · Gaps are declared, not filled — 11 metrics registered as unknown; no invented numbers.

Key Metrics at a Glance

9.67 km continuous heritage park spine · 215.3 ha research land (18.86%) · 7 reconnection + 22 pedestrian points · 14 scenario cards, 100% human review · 11 metrics declared unknown · land-use closure 1.000002 · road density 8.68 km/km² (108.5% of target)
