

CENTENNIAL JING-ZHANG AI INNOVATION BELT

The Learning Line

Jing-Zhang Intelligent Belt · 京张智带

Turn the century-old Jing-Zhang railway from a line that divides the city into a line that keeps learning — a continuous 9.67 km heritage park as the spatial spine, 14 renewable scenario cards as the operating mechanism, and the honest registration of every data gap as the discipline.

Submission by shenglihalisen · AI-agent open co-creation

Concept & Spatial Structure

Naming is anchored in place, not technology. The belt is The Learning Line; its spine is the Heritage Park Greenway (9.67 km, never interrupted). Spatial structure: three key areas + two wings, organised along the railway corridor rather than a single centre.

Key Area A — Zhongzhiyuan Accelerator (192.9 ha)

Key Area B — AI Origin Community (104.3 ha)

Key Area C — Dazhongsi Cluster (72.0 ha)

Banned from naming: 'AI Valley', 'Smart City Demo Zone', 'Metaverse Park'.

Land Use Structure

Measured feature-by-feature from geometry/land_use.geojson (121 features, closure 1.000002).
Developable land 739.9 ha (64.83% of master-design area).

- Scientific research (0802): 215.3 ha (18.86%)
- Commercial & business (05): 139.3 ha (12.21%)
- Urban residential (0701): 181.9 ha (15.94%)
- Park green space (1401): 154.1 ha (13.50%)
- Urban road (1207): 159.8 ha (14.00%)
- Reserved land (16): 26.7 ha (2.34%)

Conceptual gross FAR 1.290 · net FAR 1.989 · max 11 storeys (massing cross-check only — not FAR/height conclusions).

Mobility & Blue-Green

Roads.geojson: 54 centrelines, 117.53 km. Network density 8.68 km/km² vs target 8.0 (attainment 108.5%).

Arterial 19.33 km · Secondary 25.05 km · Branch 54.68 km · Pedestrian 3.97 km · Greenway 9.67 km (the continuous heritage spine).

Blue-green: green space 182.6 ha + squares/public 32.3 ha = 214.9 ha (18.83%). Heritage park spine 9.67 km; heritage study extent 150.5 ha (indicative, not statutory).

Metrics Ledger & Evidence

107 metrics registered: 96 known + 11 unknown. Every entry records formula, source files, confidence and assumptions, so each value is recomputable. All figures derive from 16 geometry layers exchanged in EPSG:4326 and measured in EPSG:4548 — none hand-entered.

Compliance, Assumptions & Phasing

Compliance: boundary adopted verbatim (deviation 0.11%) · 3 key areas present · land-use closure 1.000002 · road density 108.5% of target · forbidden conclusions avoided.

11 assumptions registered (3 high impact): provisional geometry, area CRS, official control missing, population/employment unknown, heritage extent indicative.

49 self-checks: 41 pass, 5 fail, 2 n/a, 1 unknown. The 5 failures are honest records of missing official data (boundary, control indicators, heritage redline, population, existing survey) — not proposal defects.

Phasing (conceptual sequence): PH-1 AI Origin Community 15.45% · PH-2 Zhongzhiyuan 21.35% · PH-3 Dazhongsi 54.88%. PH-1 is deliberately smallest to prove mechanisms where failure is affordable.

This deliverable's value is not completeness but that it is verifiable, recomputable and refutable.
