

DIGI • JZ Digital Twin Operations System - Concept Board Set

Centennial Jingzhang AI Innovation Belt

Concept proposal - provisional boundaries - recompute after official data (not an official redline)

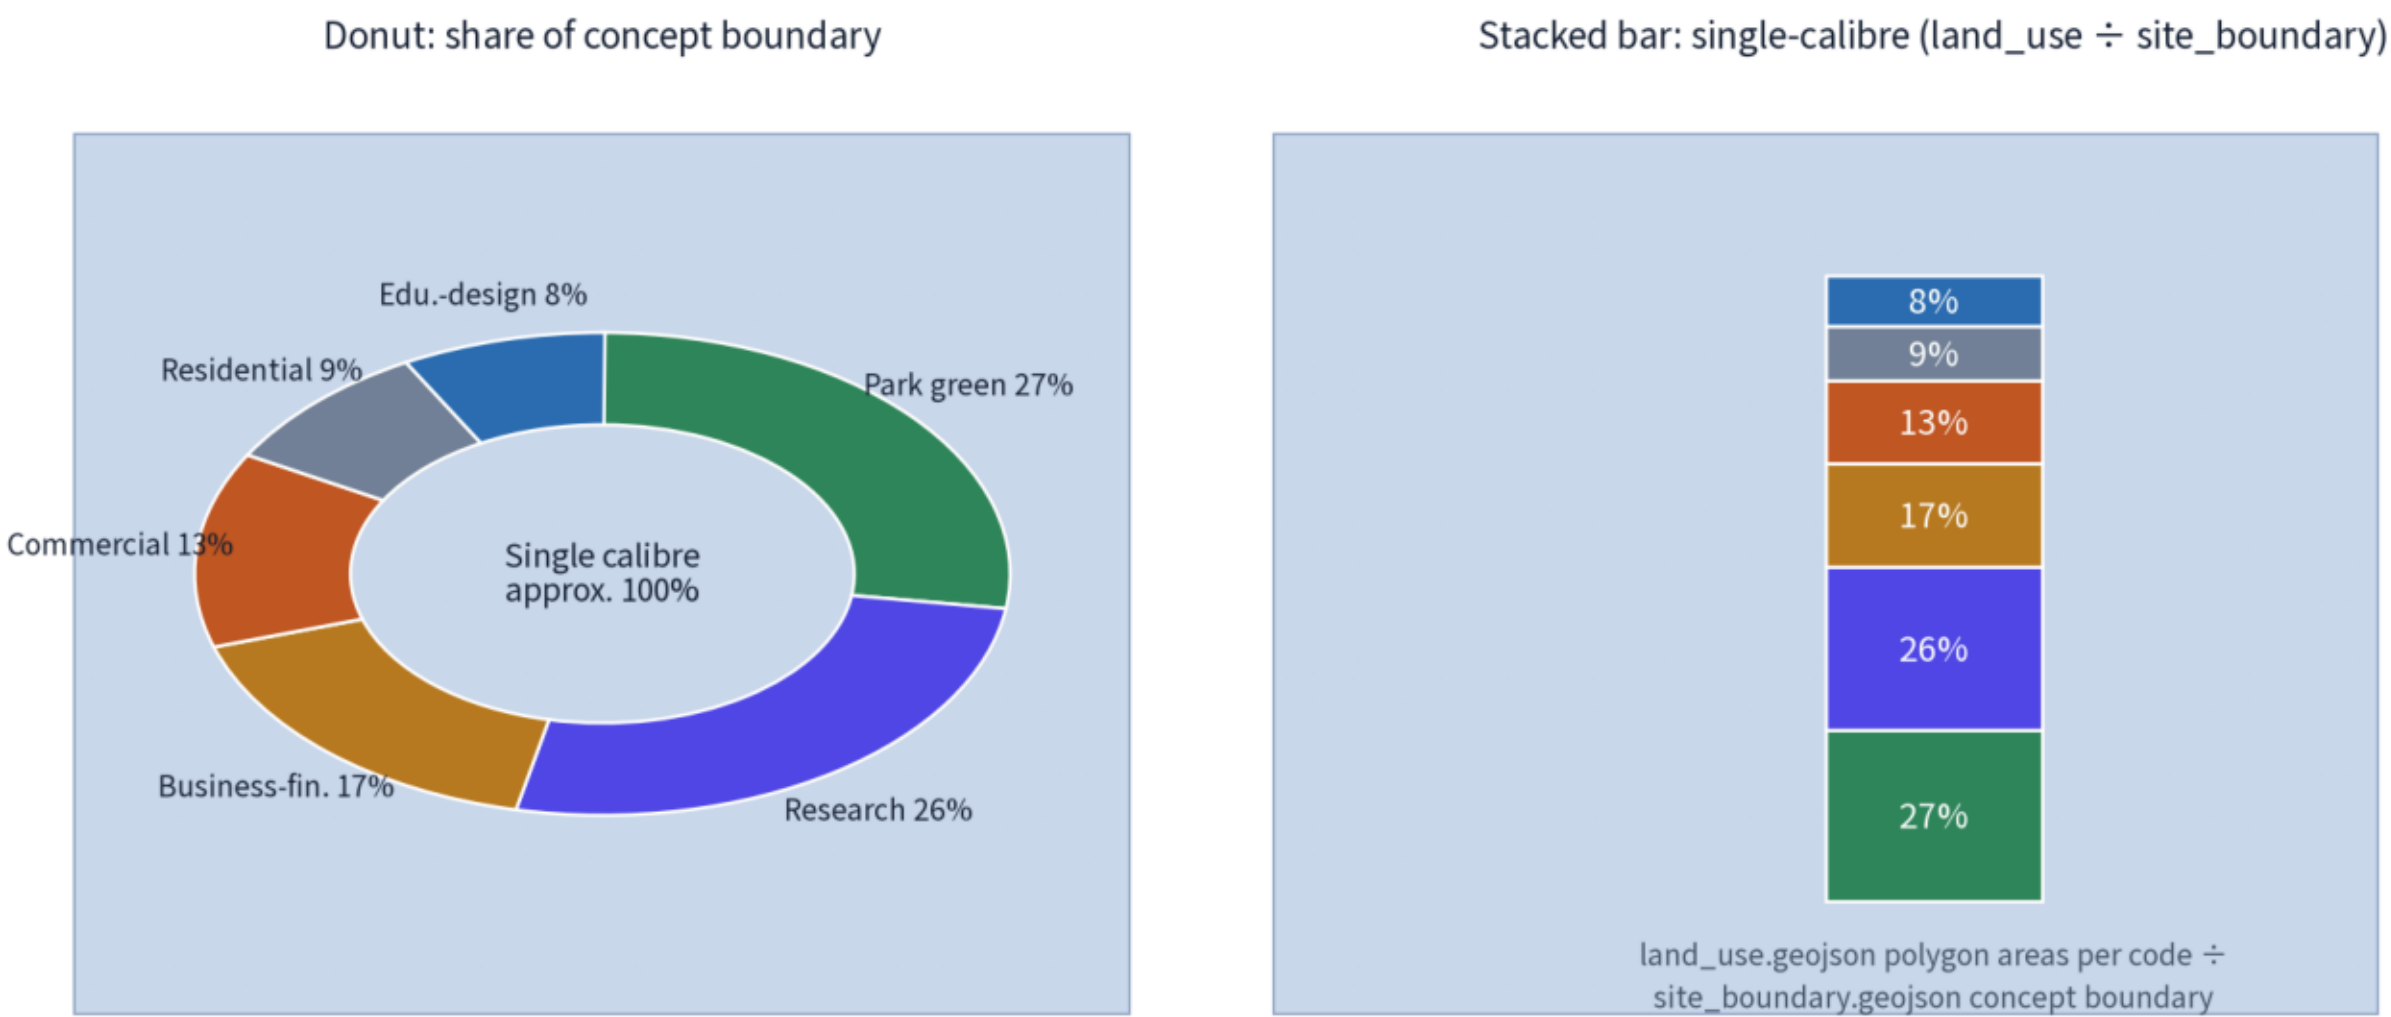

Overall Design Overview (provisional concept geometry)

Coordinated research scope approx. 43.6 km2; overall design scope approx. 11.4 km2 (official wording).
Wing orientation is a concept interpretation (west: Zhongguancun Technology Service Wing; east: Xiaoyuehe Scenario Empowerment Wing) pending official release; station names are public references, not redlines; schematic proportions.

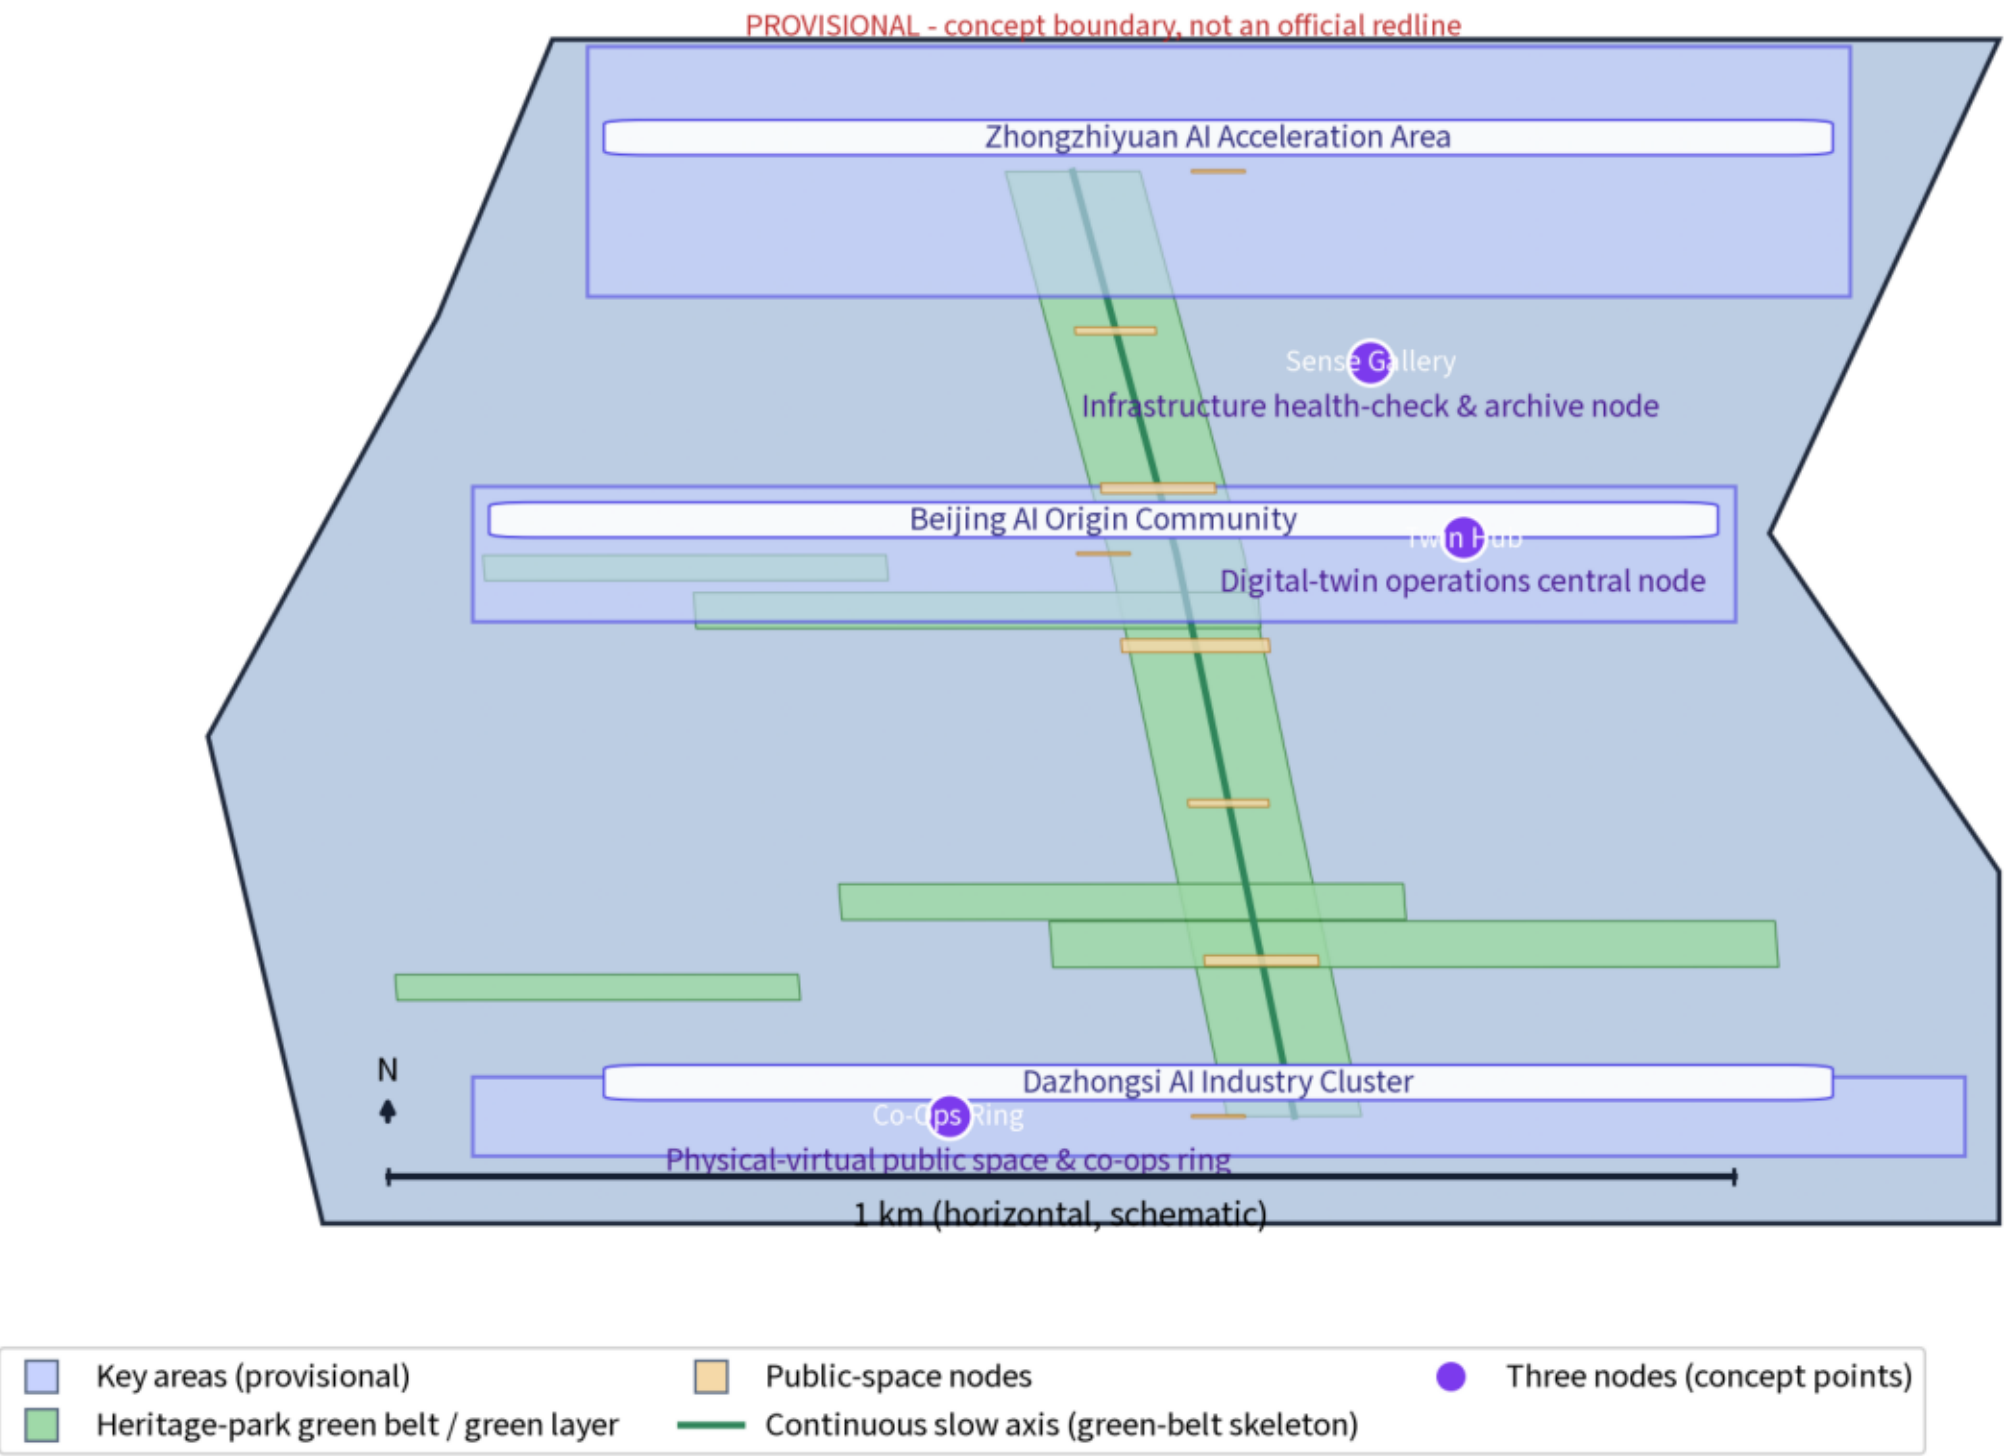

Concept Land-Use Structure (land-use classification calibre, provisional)

PROVISIONAL - concept boundary, not an official redline

Codes (land-use guide): 1401 park green, 0802 research, 0902 business-fin., 0901 commercial, 0701 residential, 0804 edu.-design
Calibre note: "park green approx. 27%" is the land-use classification calibre; the green ratio approx. 11% on the metrics chart is a different layer and definition (green_space.geojson geometry layer ÷ concept boundary) - not mutually derivable. All values provisional (approx. 27/26/17/13/9/8%); recomputed after official data.

Three Key Areas - Detailed Design Index (concept node points)

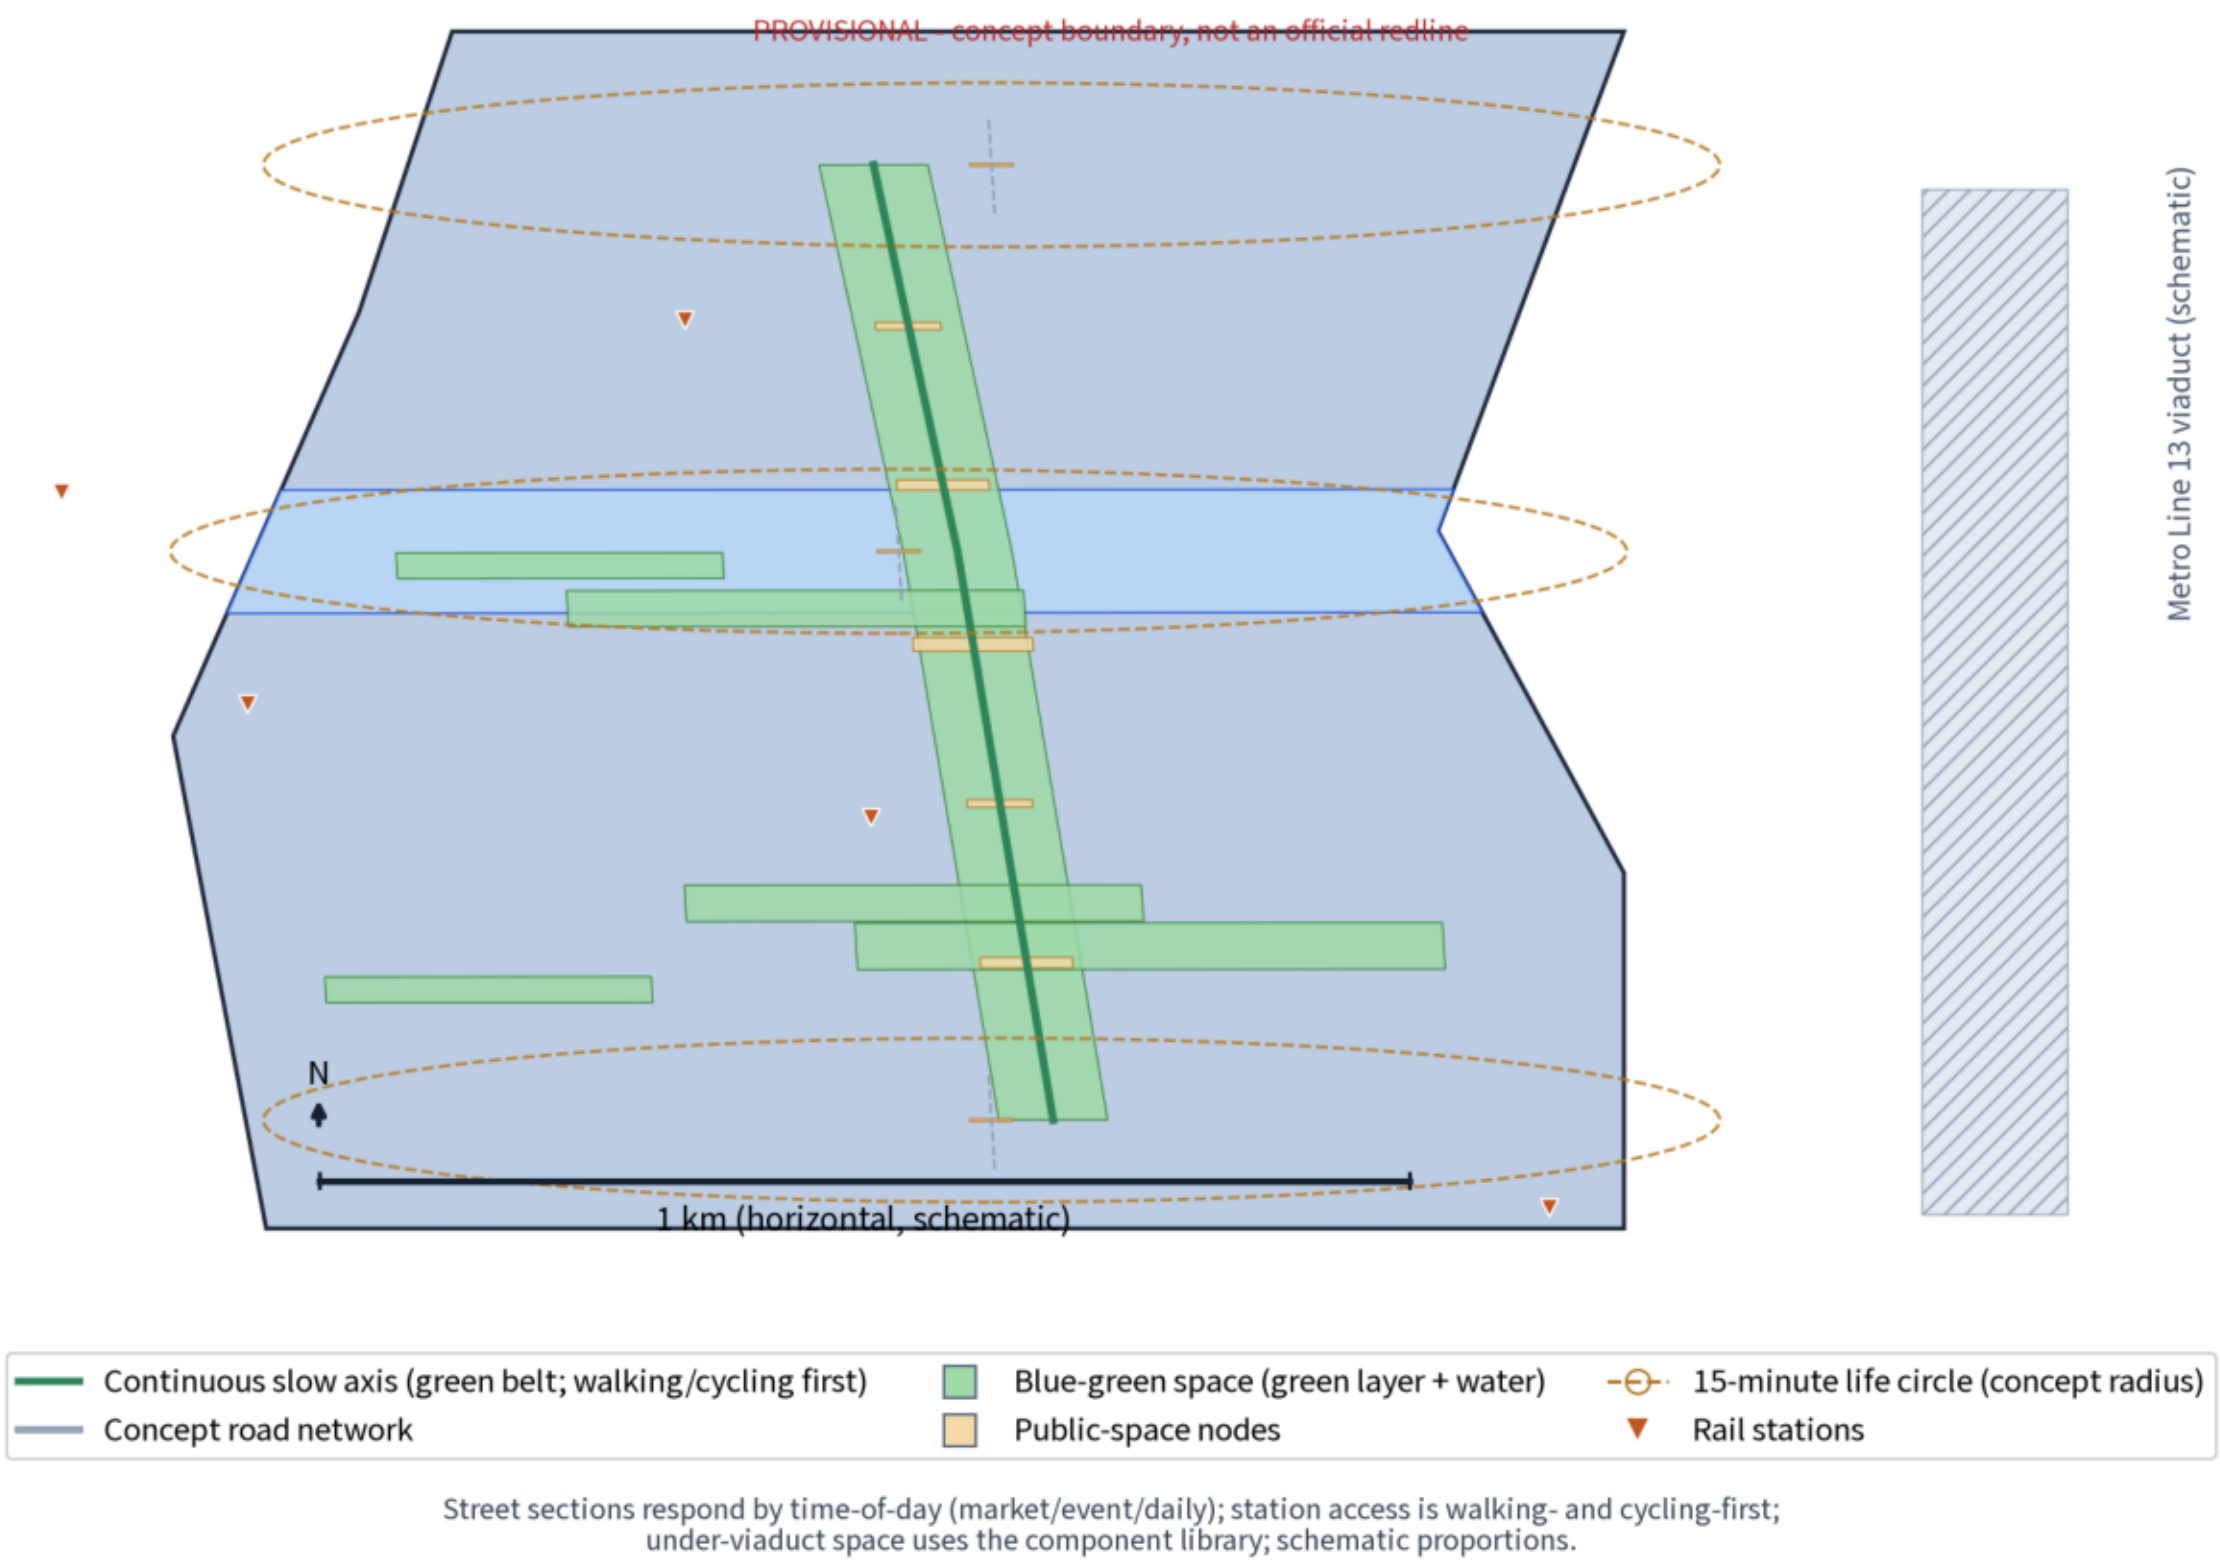

Node locations are concept points pending planning, heritage and authority assessment; see booklet and geometry layers; schematic proportions.

DIGI • JZ Digital Twin Operations System - Concept Board Set (2/2)

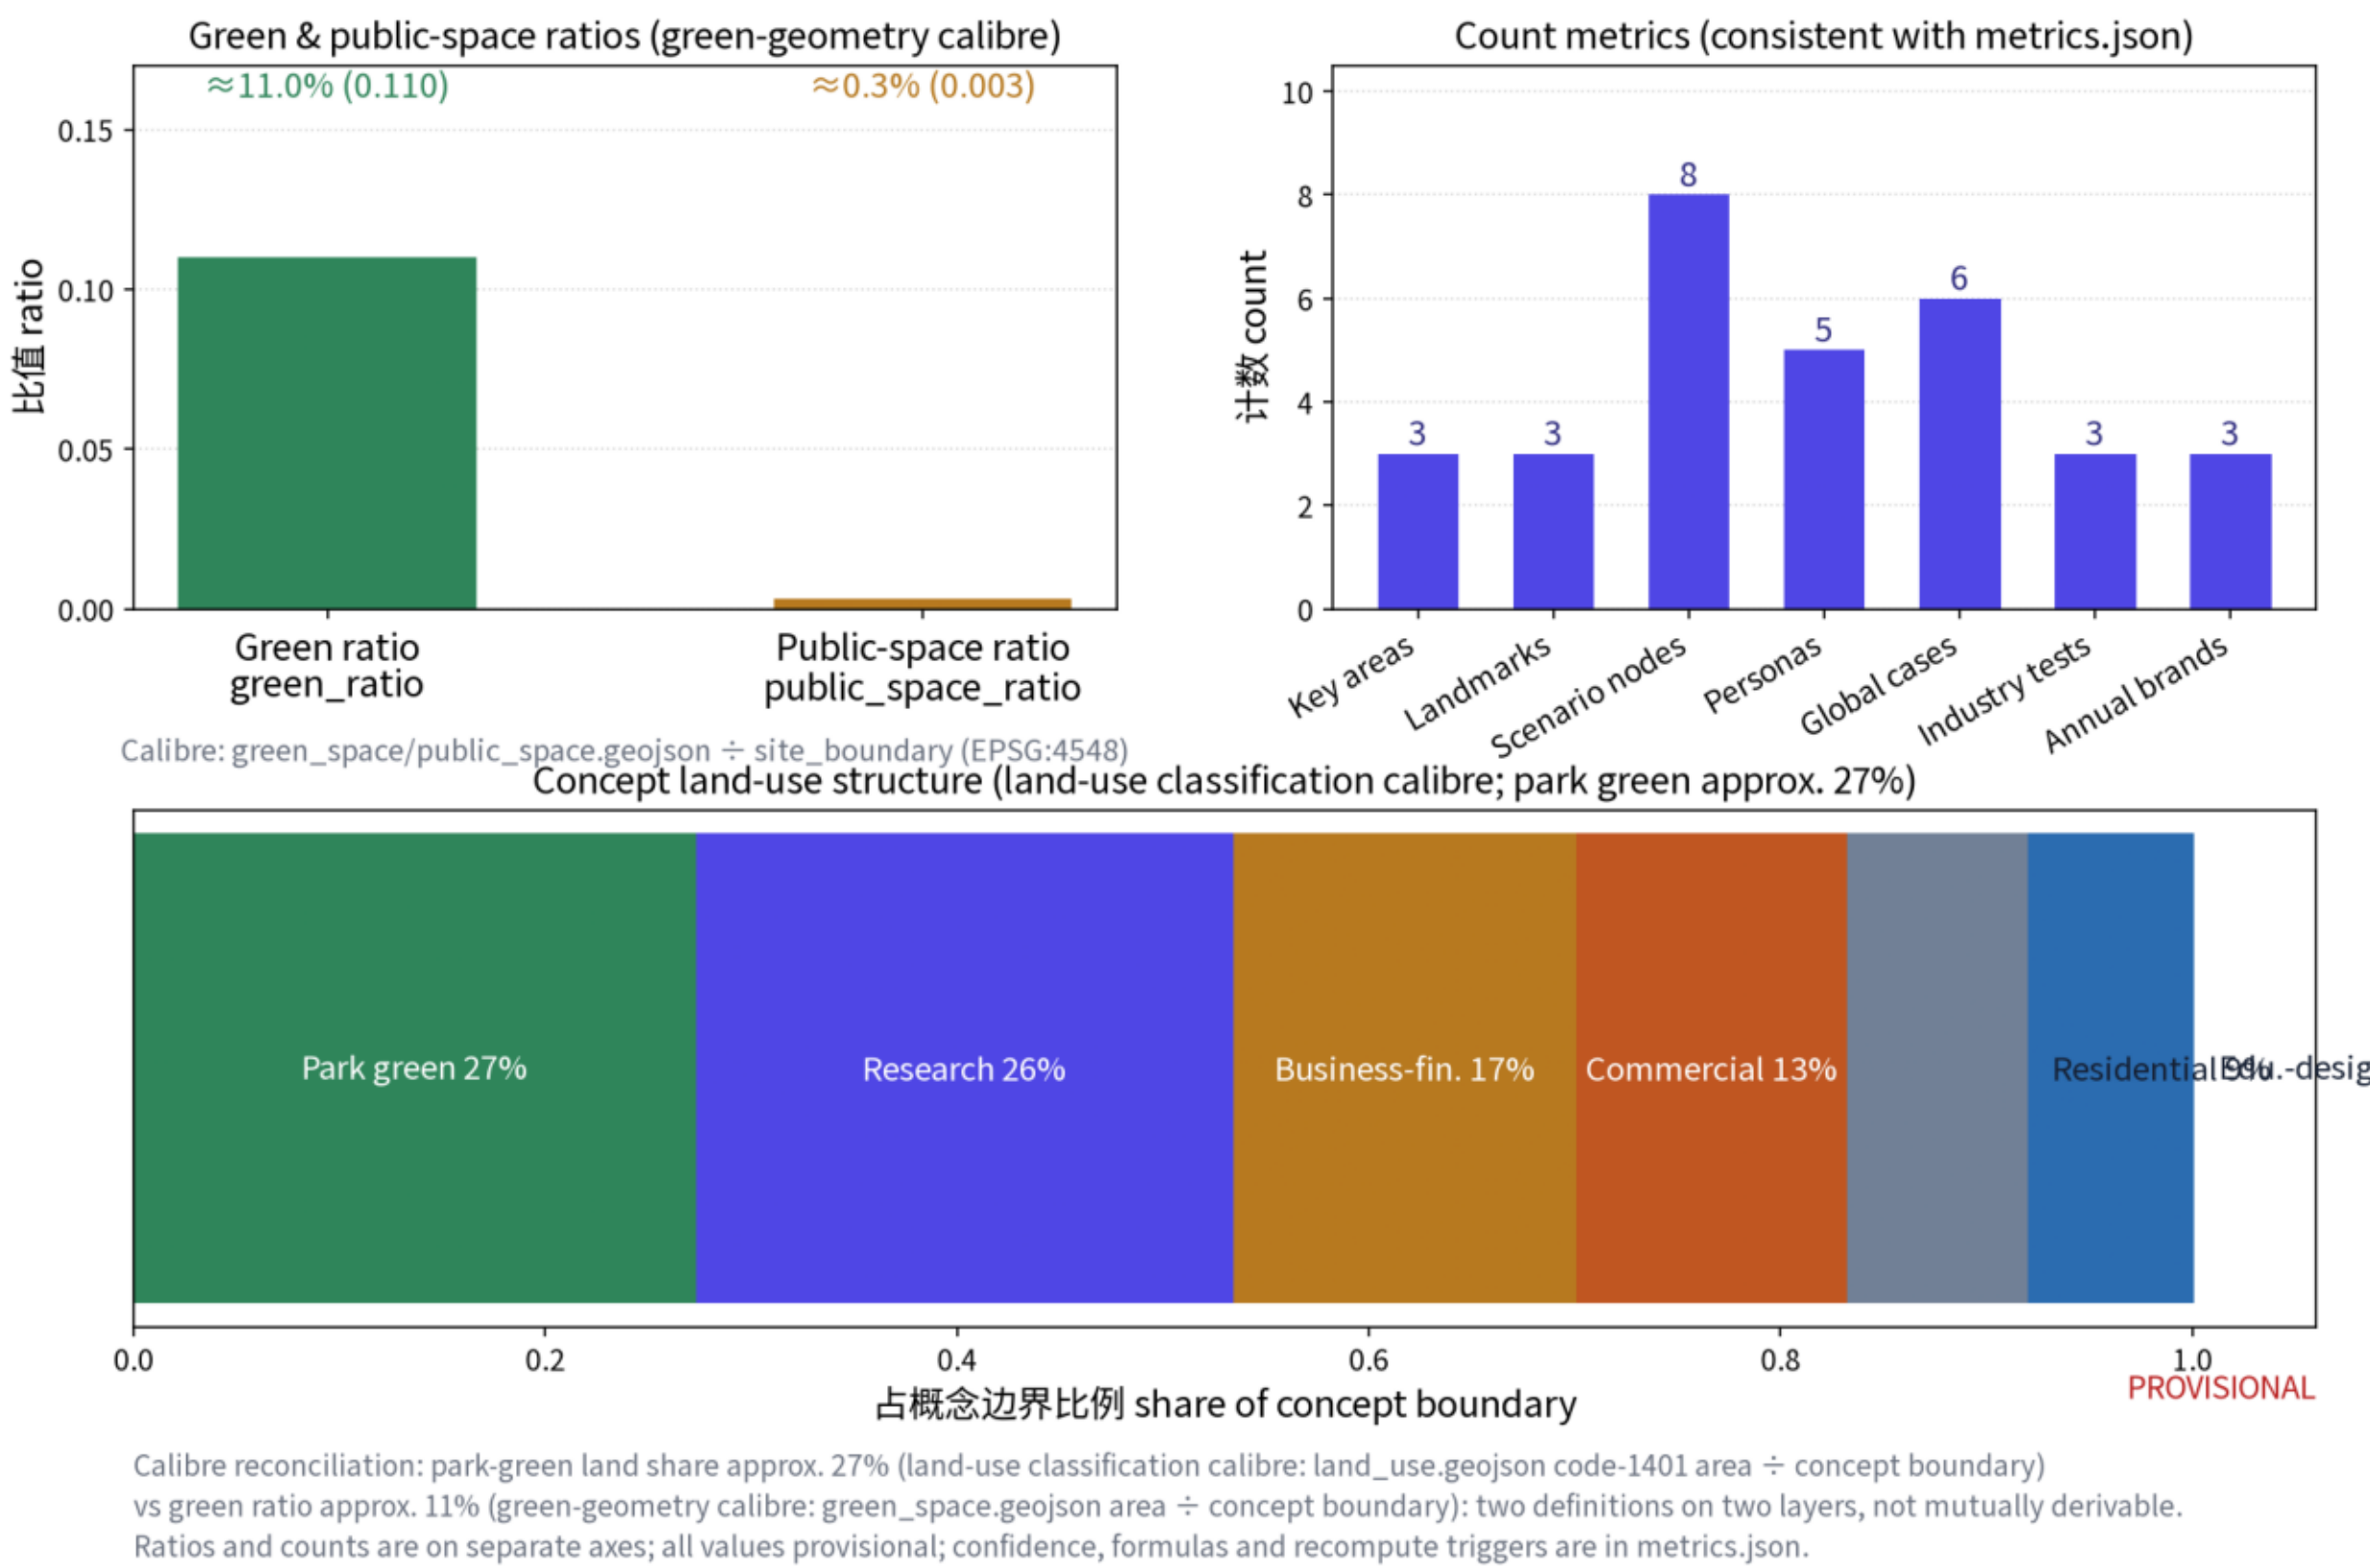

Centennial Jingzhang AI Innovation Belt

Concept proposal - provisional boundaries - recompute after official data (not an official redline)

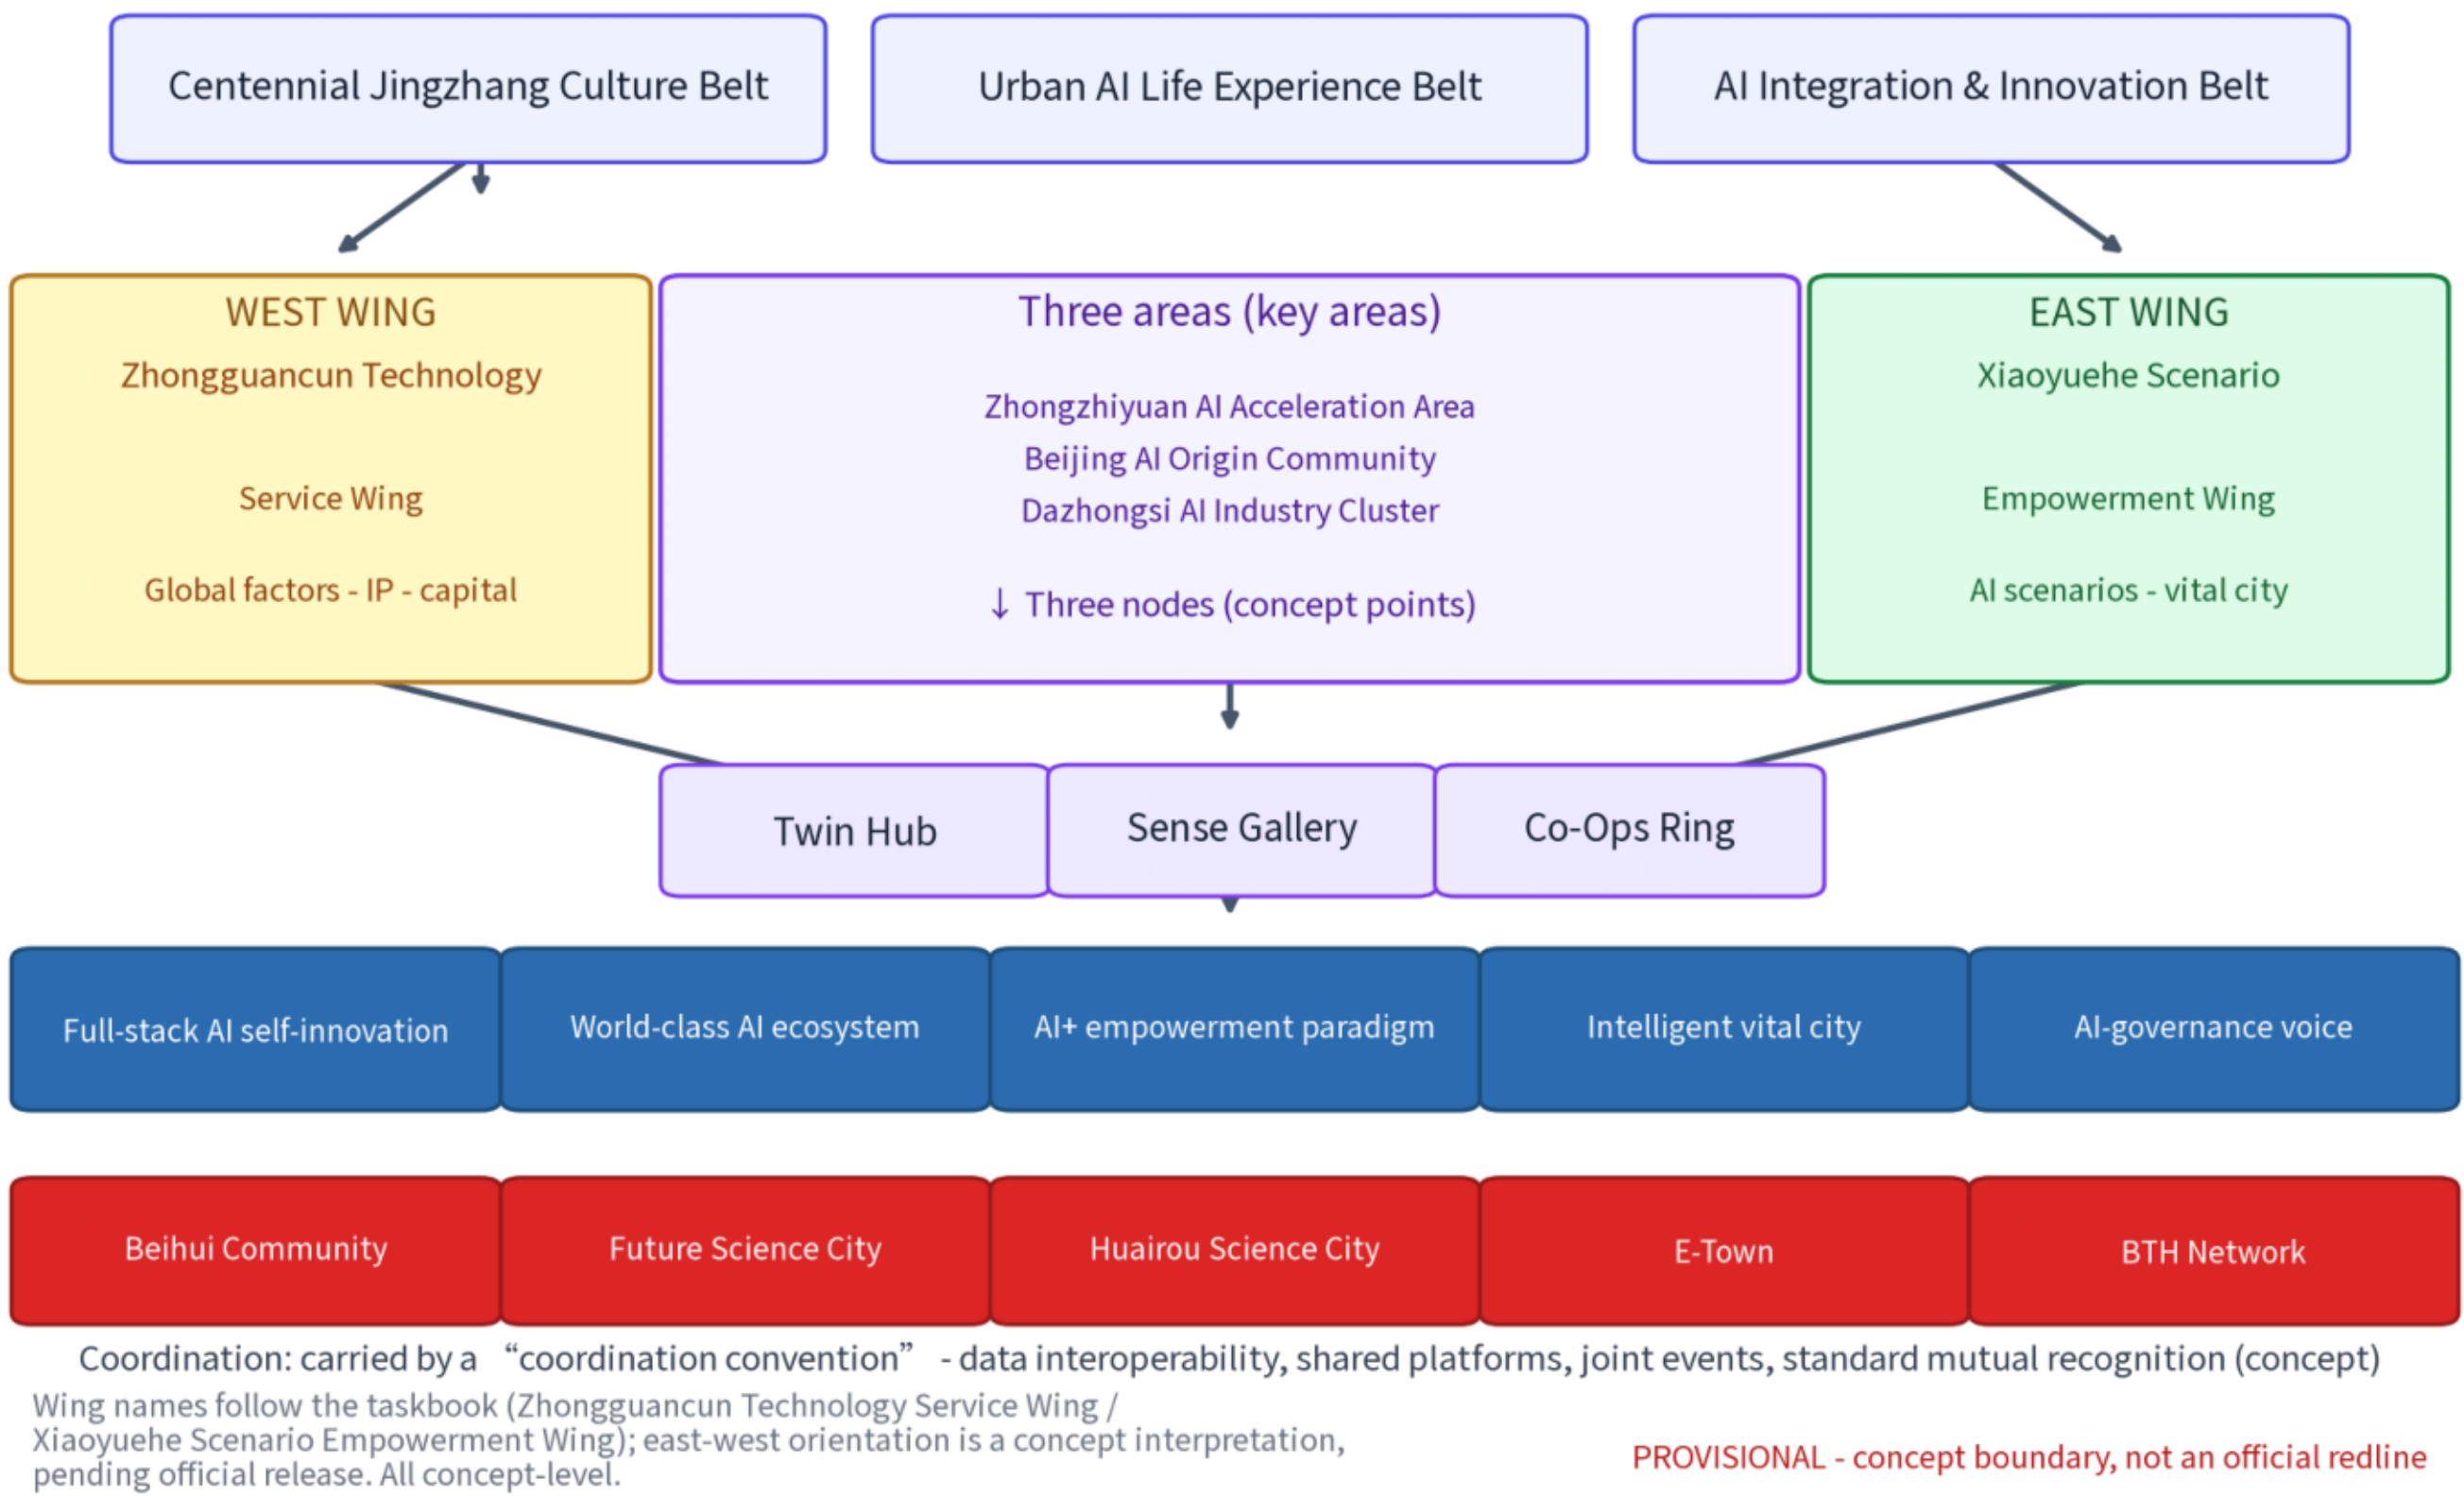

Slow-Mobility and Blue-Green Space Analysis (continuous axis x blue-green skeleton)

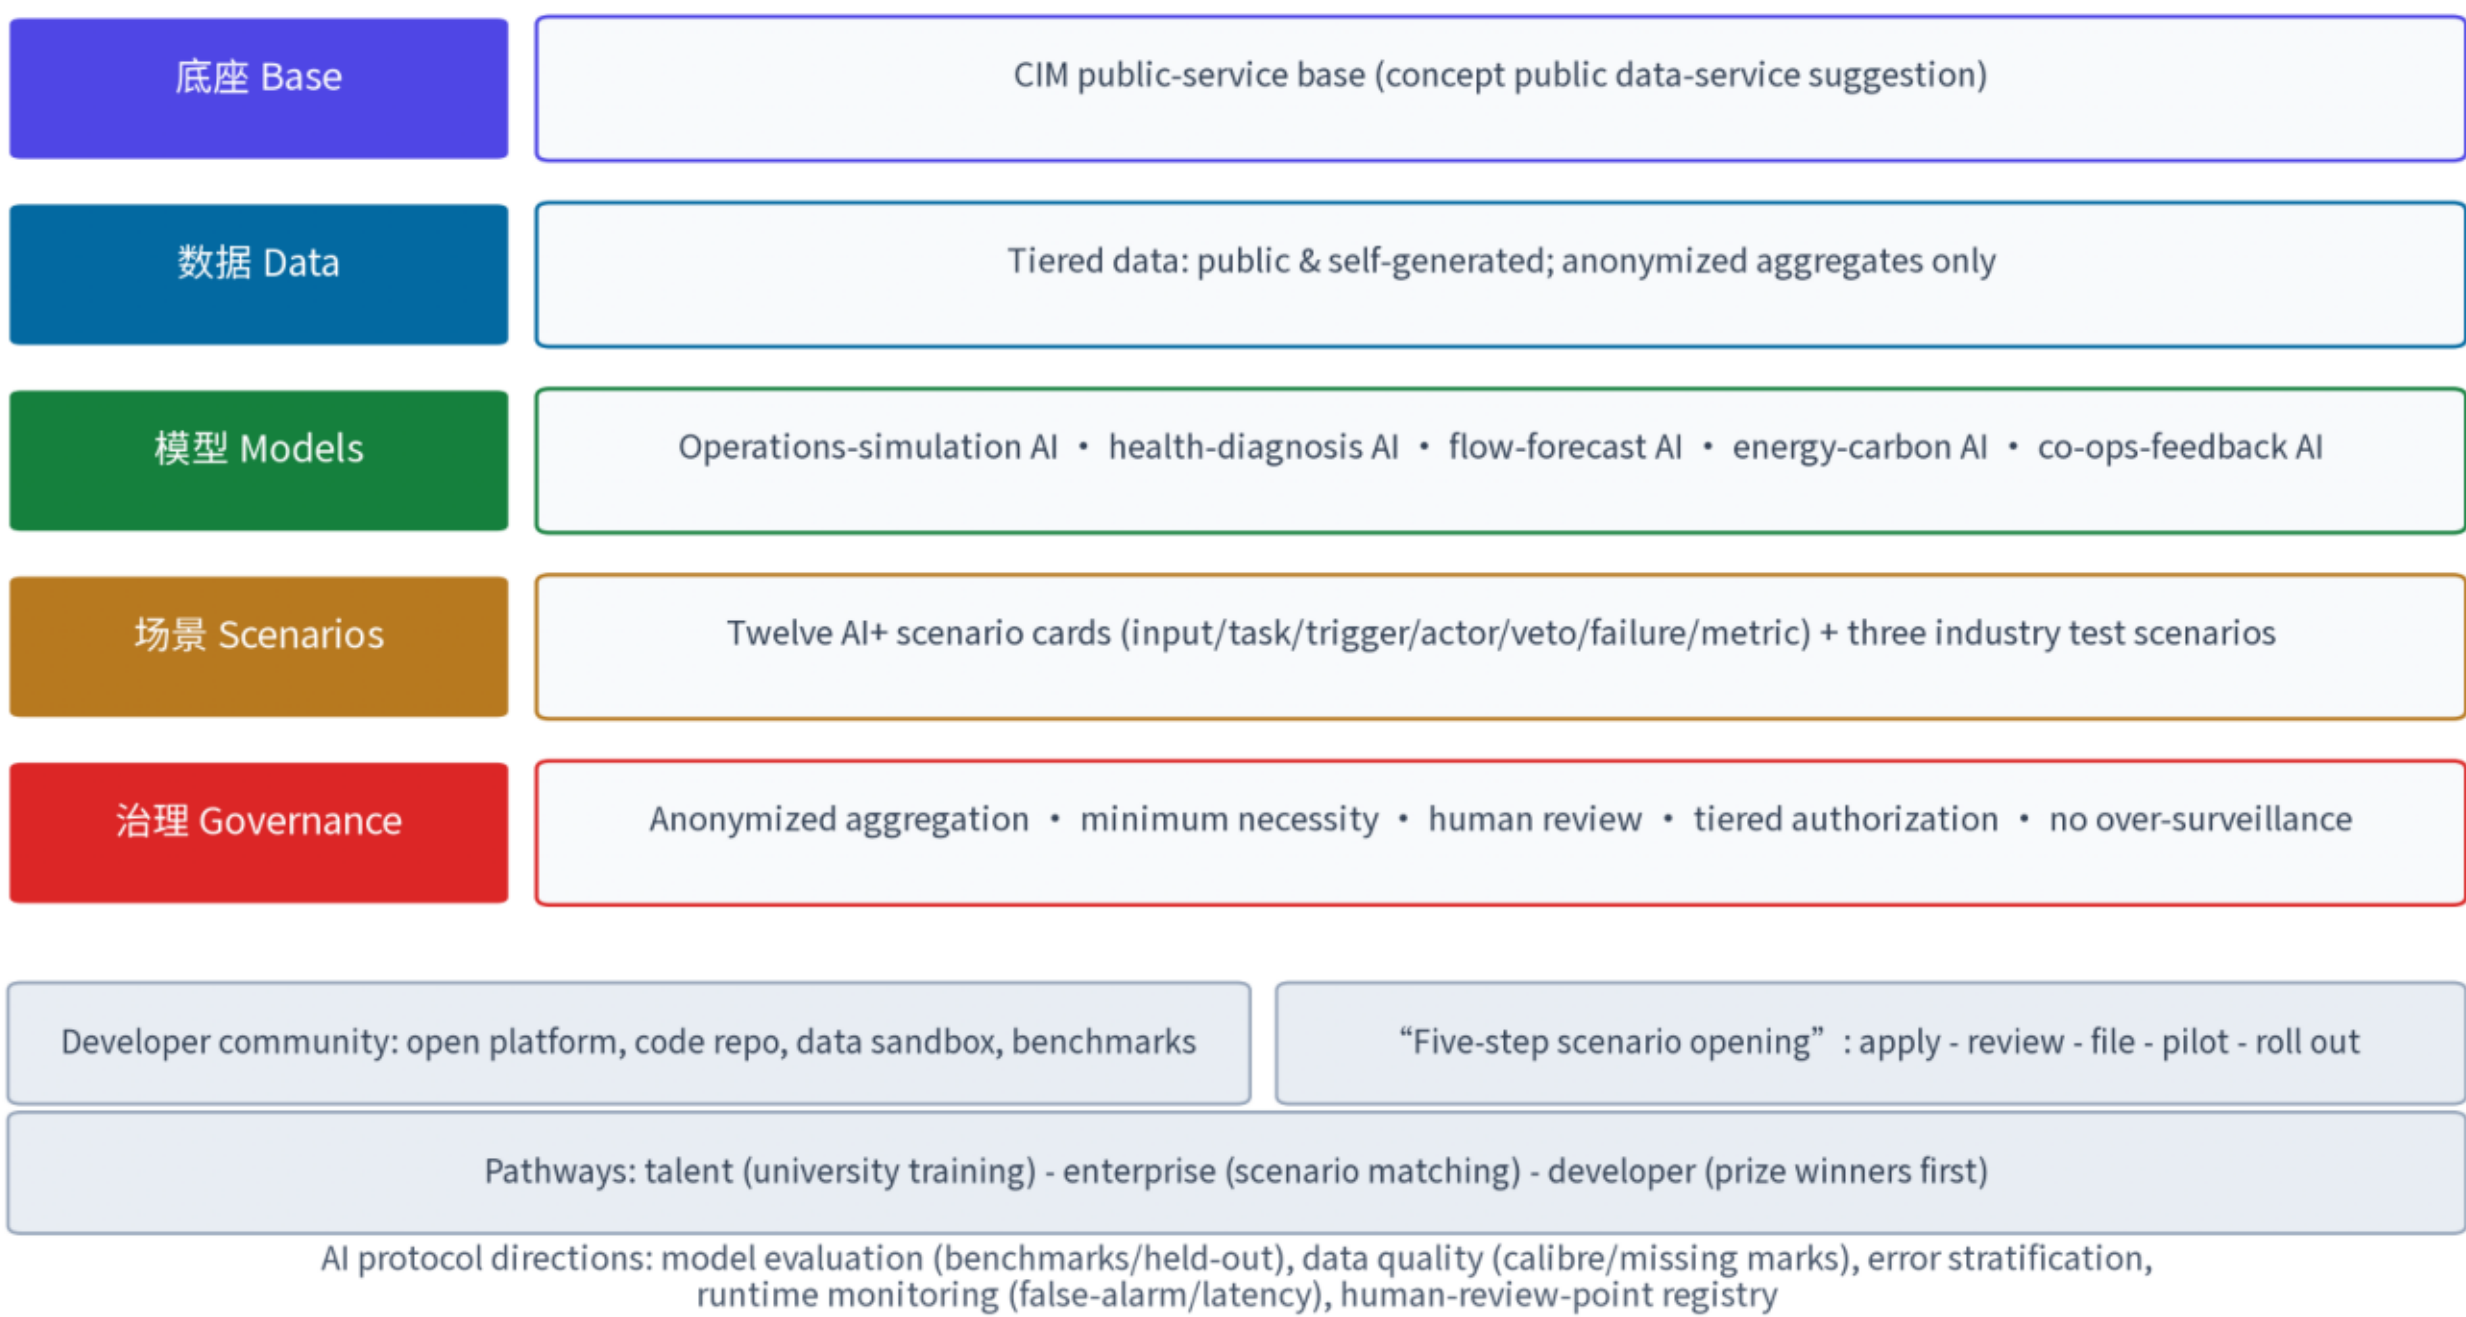

Metrics Evidence (provisional concept values; recompute after official data)

Three positions - five functions - three areas & two wings - three nodes: coordination loop

AI Innovation Ecosystem Map: base - data - models - scenarios - governance

PROVISIONAL - concept boundary, not an official redline
