

DIGI • JZ Digital Twin Operations System - Concept Board Set

Centennial Jingzhang AI Innovation Belt

Concept proposal - provisional boundaries - recompute after official data (not an official redline)

Three areas & two wings - three nodes - twelve scenario cards - five personas - phasing and co-ops operations (all concept-level)

Overall Design Overview (provisional concept geometry)

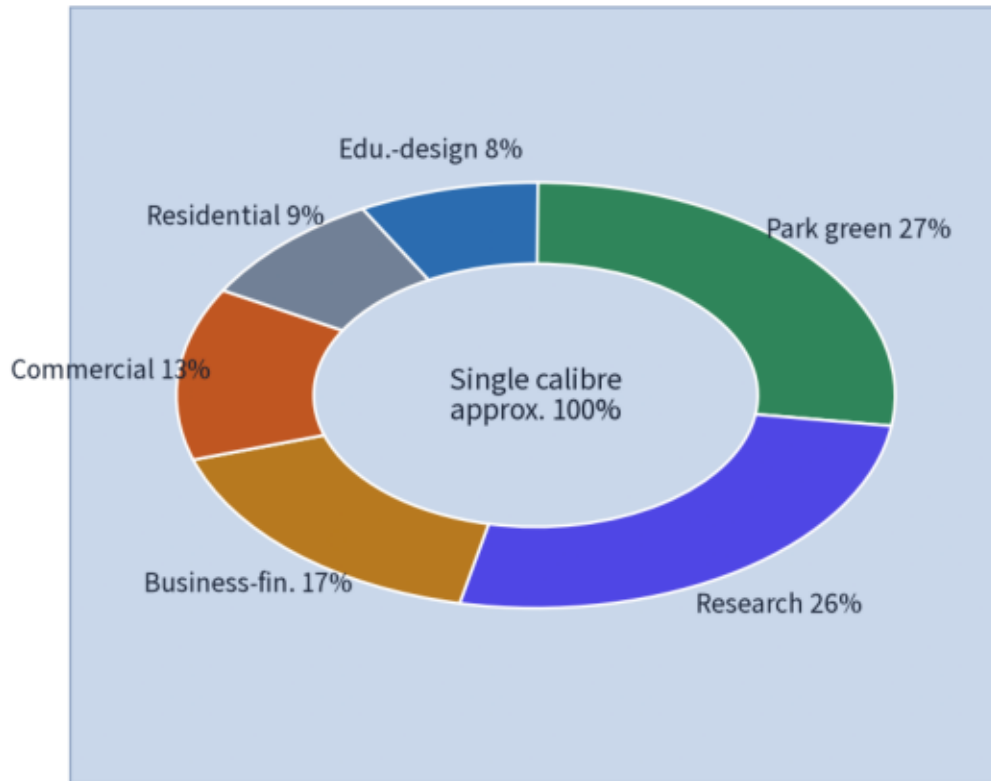

Coordinated research scope approx. 43.6 km²; overall design scope approx. 11.4 km² (official wording).

Wing orientation is a concept interpretation (west: Zhongguancun Technology Service Wing; east: Xiaoyuehe Scenario Empowerment Wing) pending official release; station names are public references, not redlines; schematic proportions.

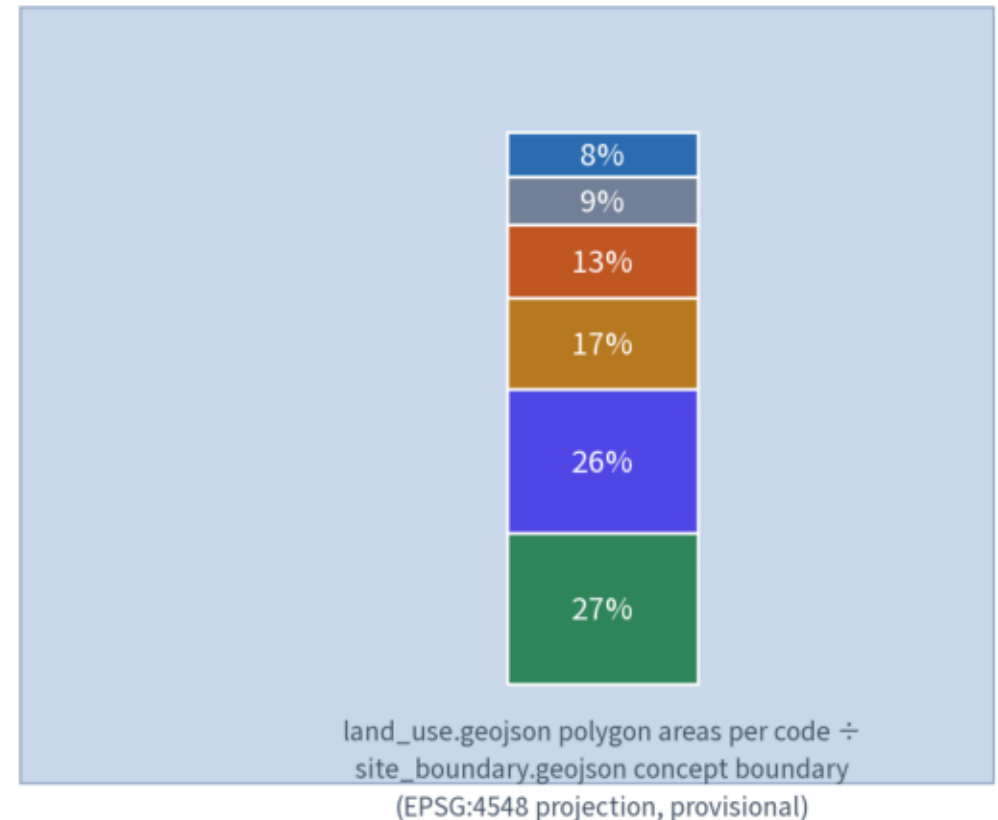

Concept Land-Use Structure (land-use classification calibre, provisional)

PROVISIONAL - concept boundary, not an official redline

Donut: share of concept boundary

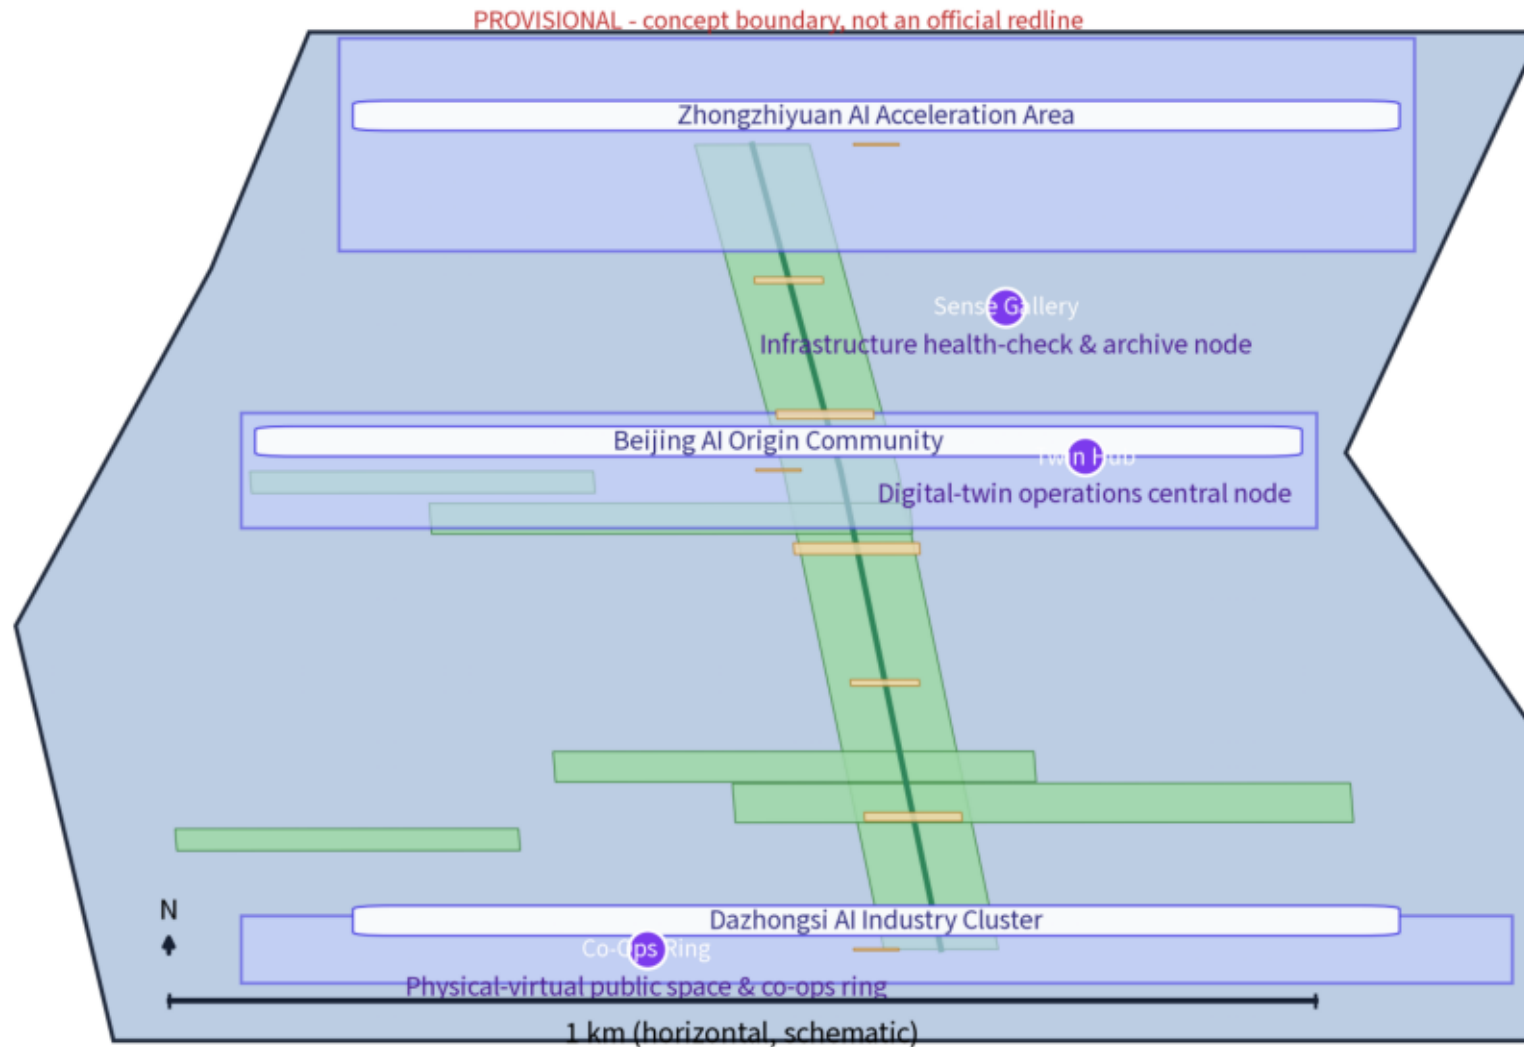

Stacked bar: single-calibre (land_use ÷ site_boundary)

Codes (land-use guide): 1401 park green, 0802 research, 0902 business-fin., 0901 commercial, 0701 residential, 0804 edu.-design

Calibre note: “park green approx. 27%” is the land-use classification calibre; the green ratio approx. 11% on the metrics chart is a different layer and definition (green_space.geojson geometry layer ÷ concept boundary) - not mutually derivable. All values provisional (approx. 27/26/17/13/9/8%); recomputed after official data.

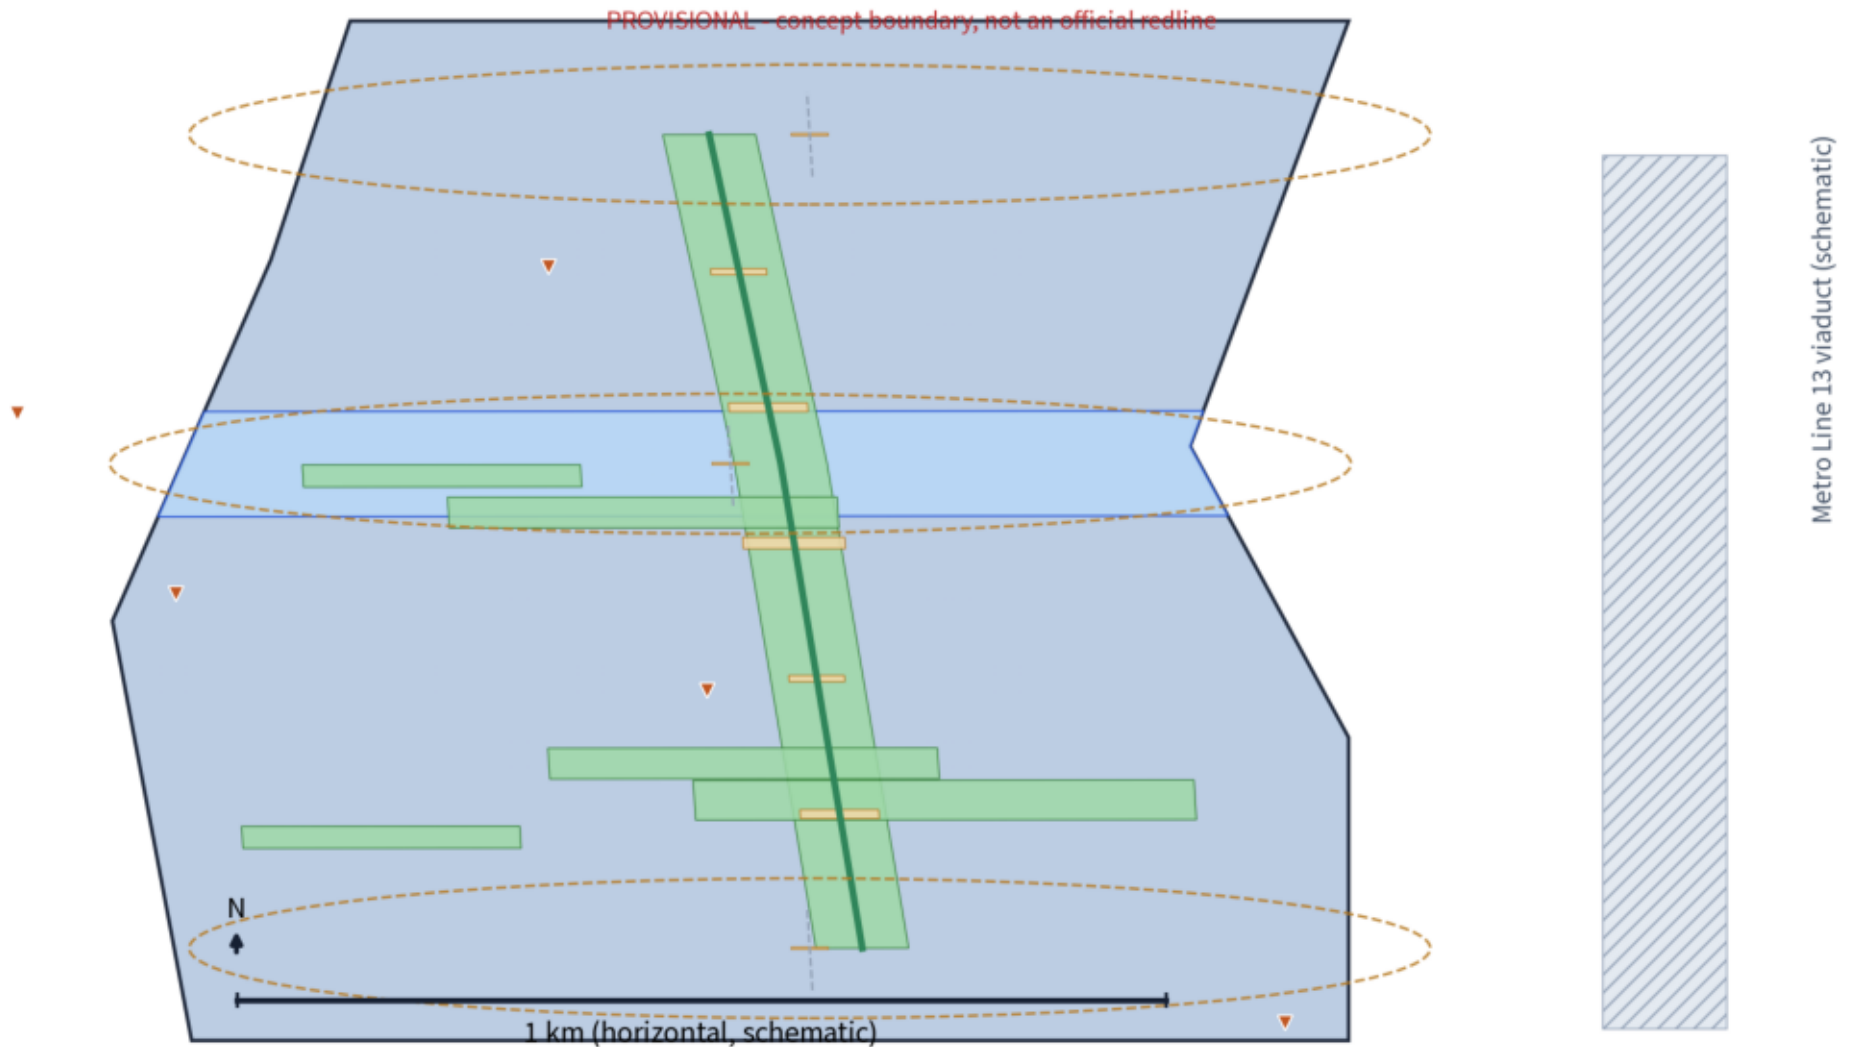

Three Key Areas - Detailed Design Index (concept node points)

- | | | |
|--|--|--|
| Key areas (provisional) | Public-space nodes | Three nodes (concept points) |
| Heritage-park green belt / green layer | Continuous slow axis (green-belt skeleton) | |

Node locations are concept points pending planning, heritage and authority assessment; see booklet and geometry layers; schematic proportions.

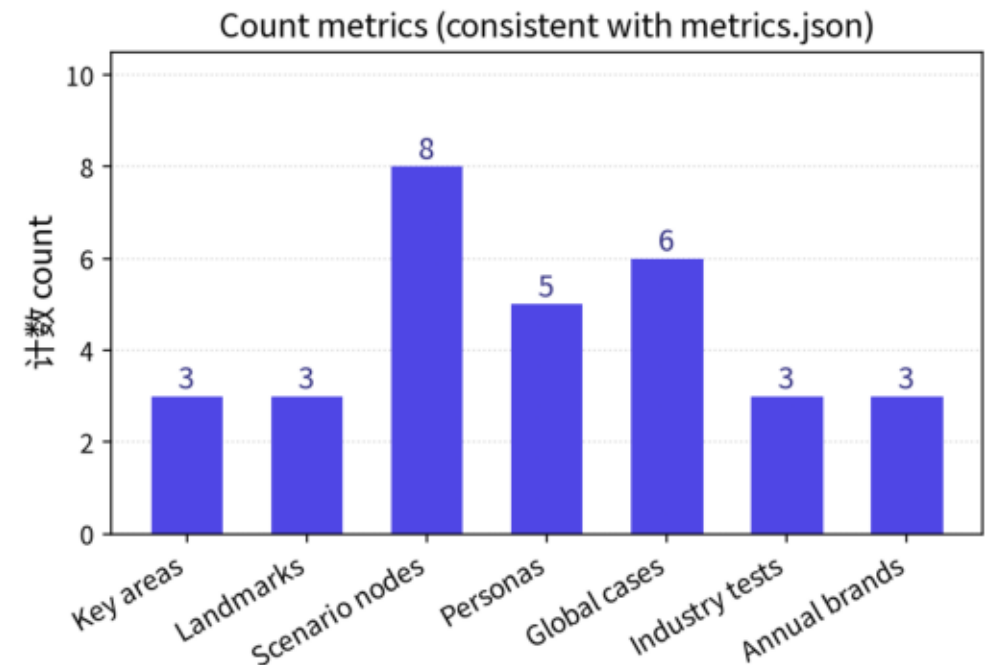

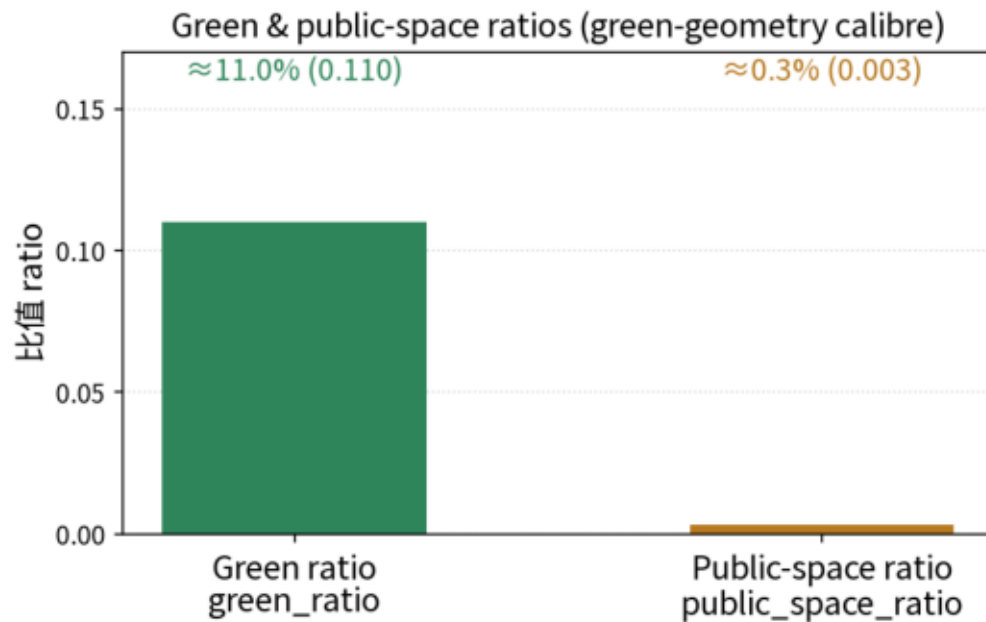

Slow-Mobility and Blue-Green Space Analysis (continuous axis x blue-green skeleton)

- | | | |
|--|--|--|
| Continuous slow axis (green belt; walking/cycling first) | Blue-green space (green layer + water) | 15-minute life circle (concept radius) |
| Concept road network | Public-space nodes | Rail stations |

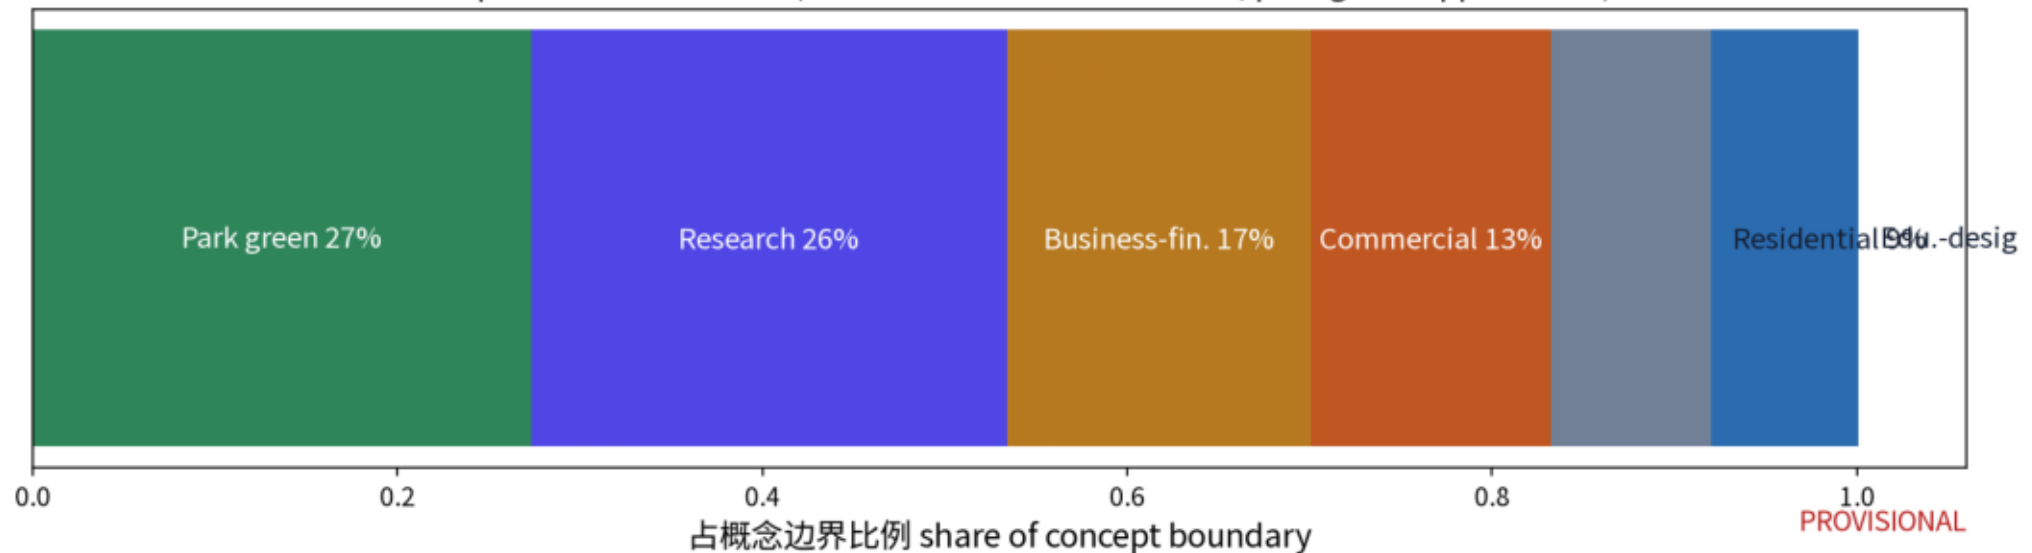

Street sections respond by time-of-day (market/event/daily); station access is walking- and cycling-first; under-viaduct space uses the component library; schematic proportions.

Metrics Evidence (provisional concept values; recompute after official data)

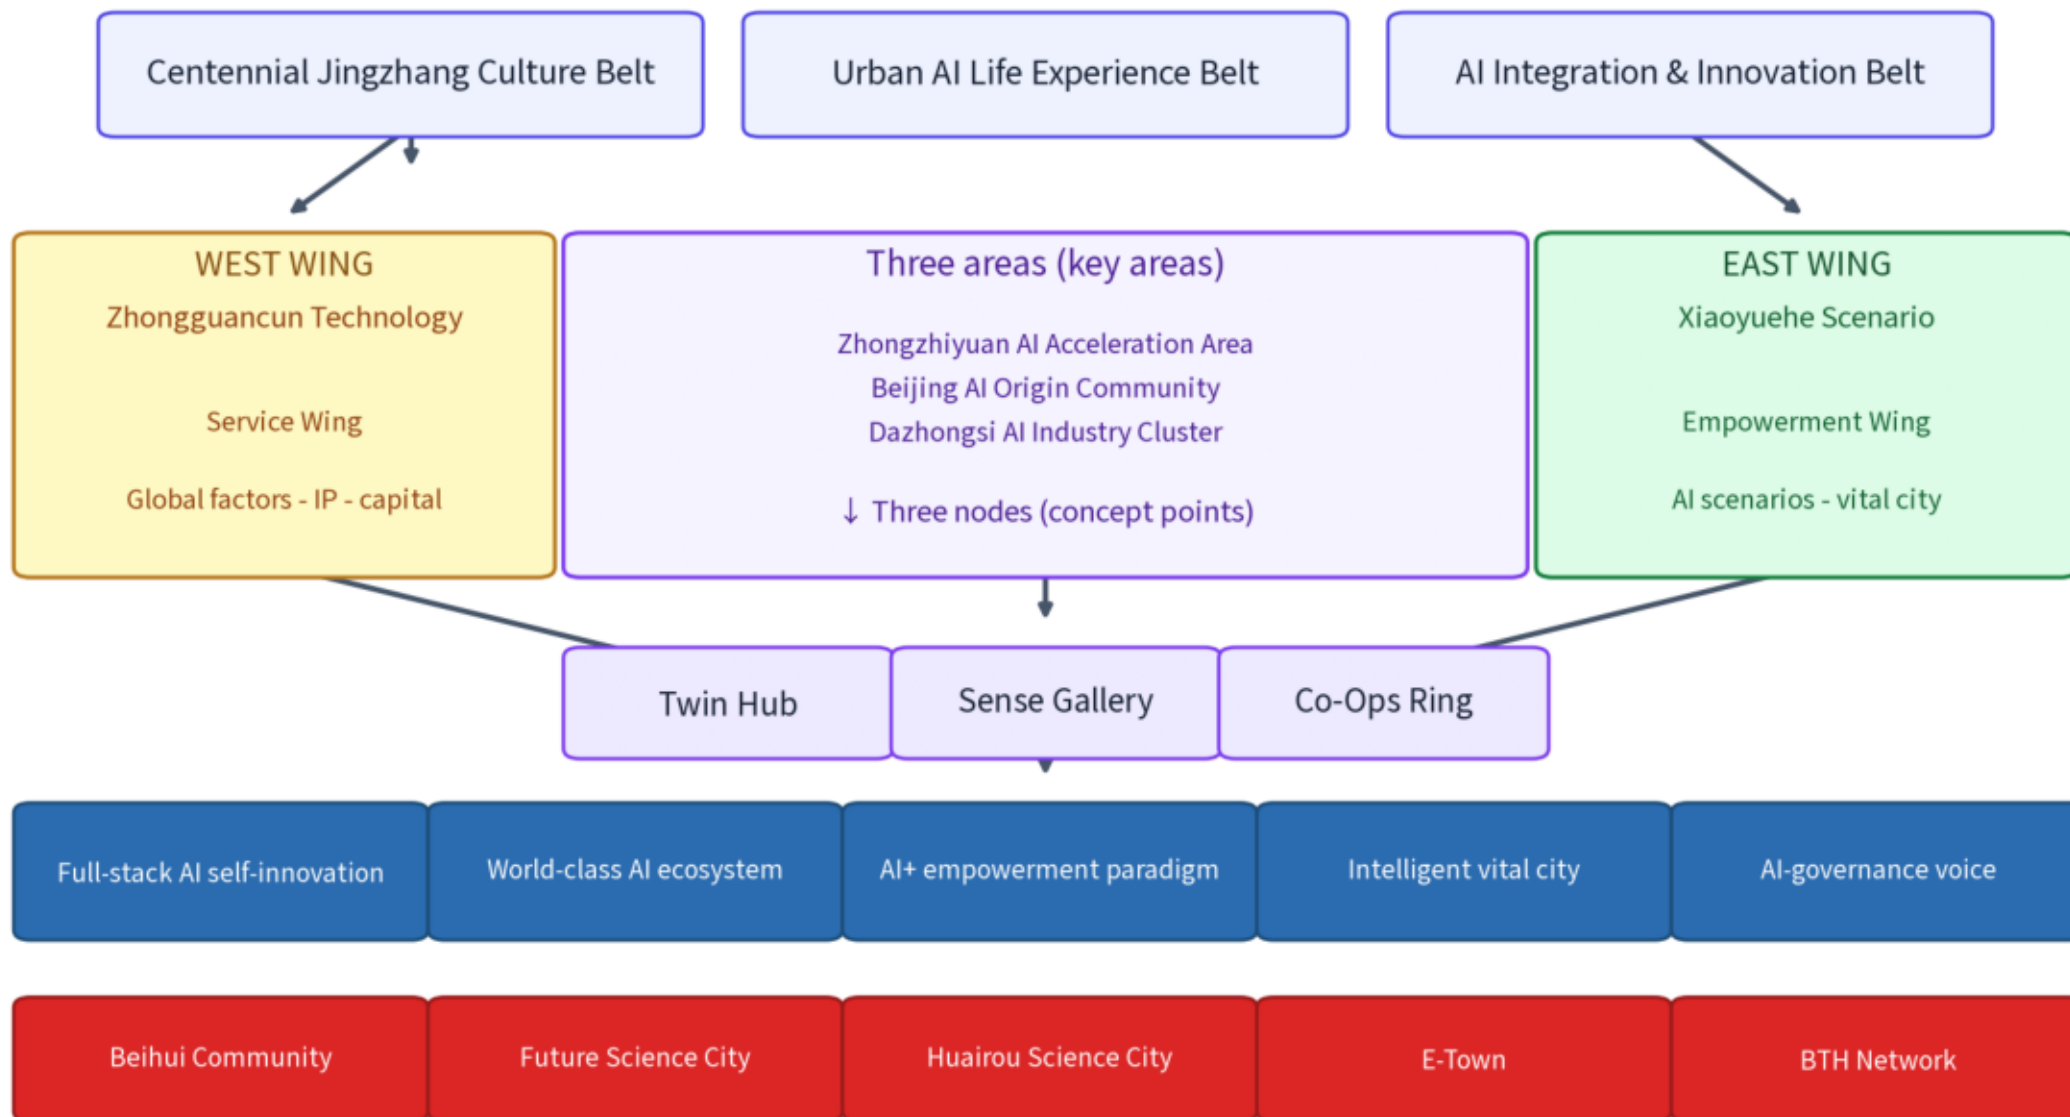

Calibre: $\text{green_space}/\text{public_space.geojson} \div \text{site_boundary (EPSG:4548)}$

Concept land-use structure (land-use classification calibre; park green approx. 27%)

Calibre reconciliation: park-green land share approx. 27% (land-use classification calibre: $\text{land_use.geojson code-1401 area} \div \text{concept boundary}$) vs green ratio approx. 11% (green-geometry calibre: $\text{green_space.geojson area} \div \text{concept boundary}$): two definitions on two layers, not mutually derivable. Ratios and counts are on separate axes; all values provisional; confidence, formulas and recompute triggers are in metrics.json.

Three positions - five functions - three areas & two wings - three nodes: coordination loop

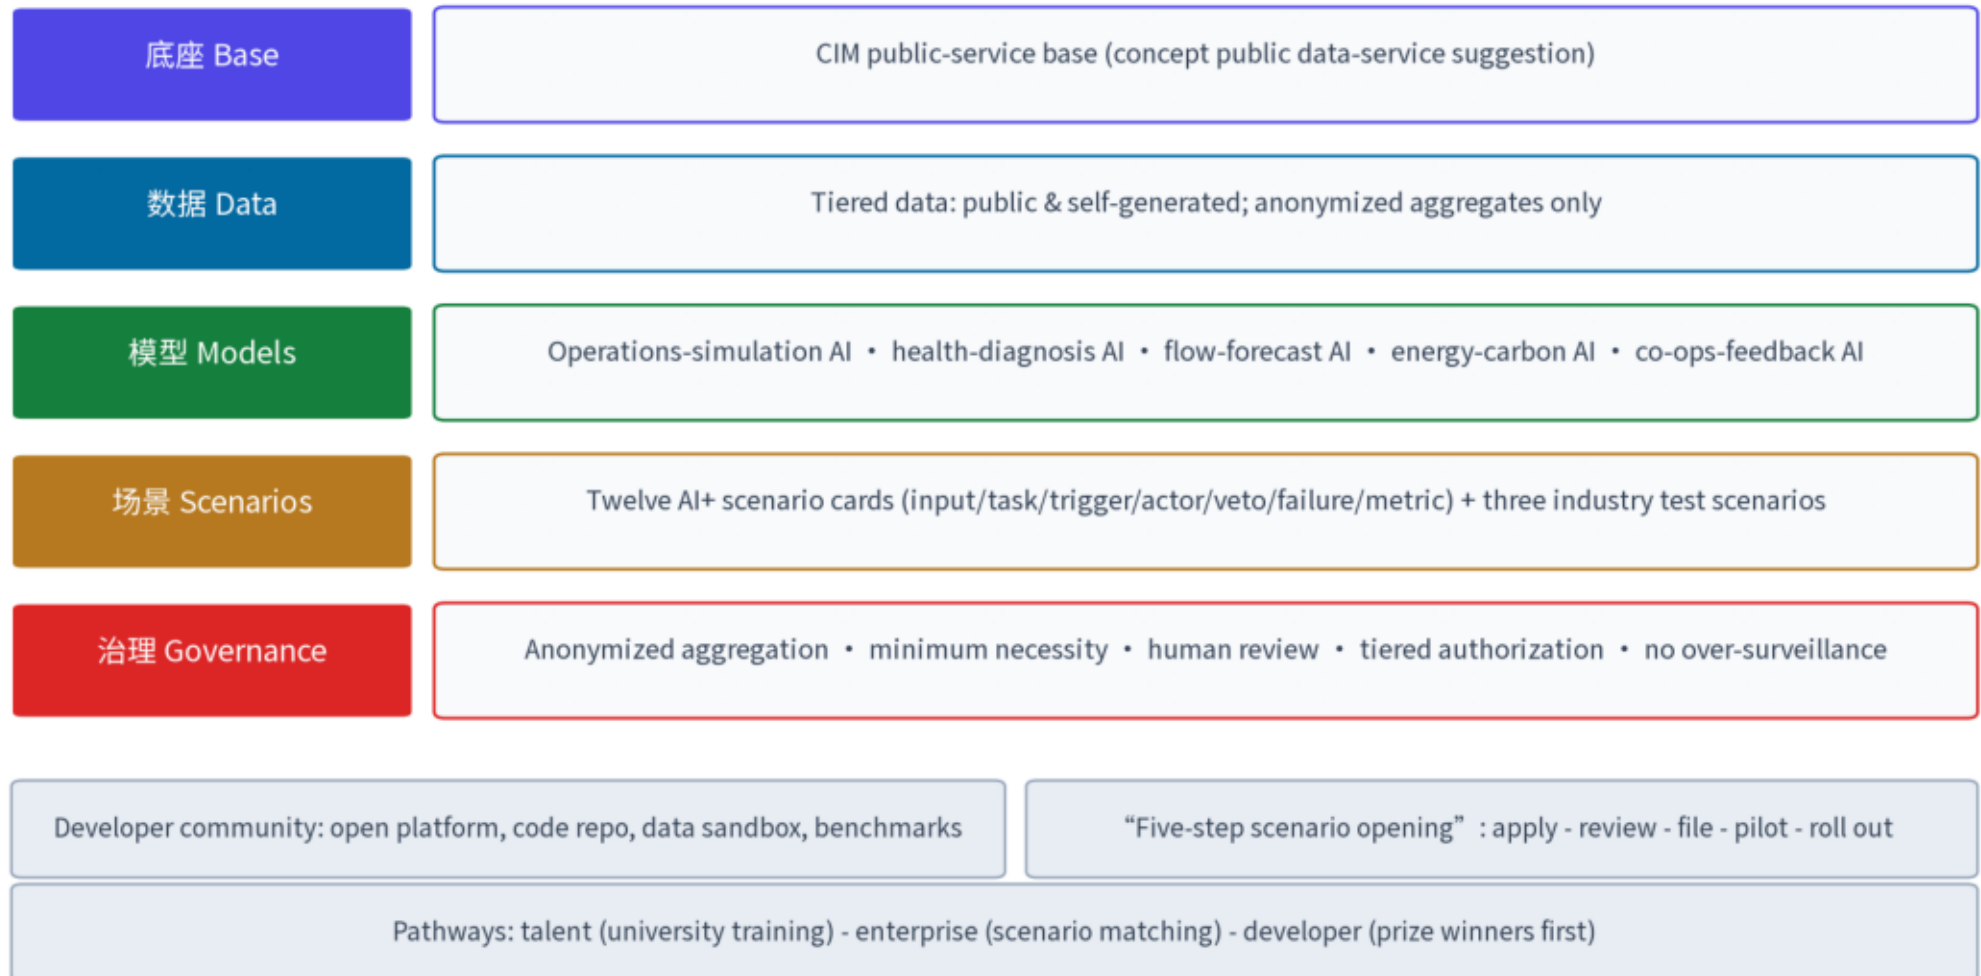

Coordination: carried by a “coordination convention” - data interoperability, shared platforms, joint events, standard mutual recognition (concept)

Wing names follow the taskbook (Zhongguancun Technology Service Wing / Xiaoyuehe Scenario Empowerment Wing); east-west orientation is a concept interpretation, pending official release. All concept-level.

PROVISIONAL - concept boundary, not an official redline

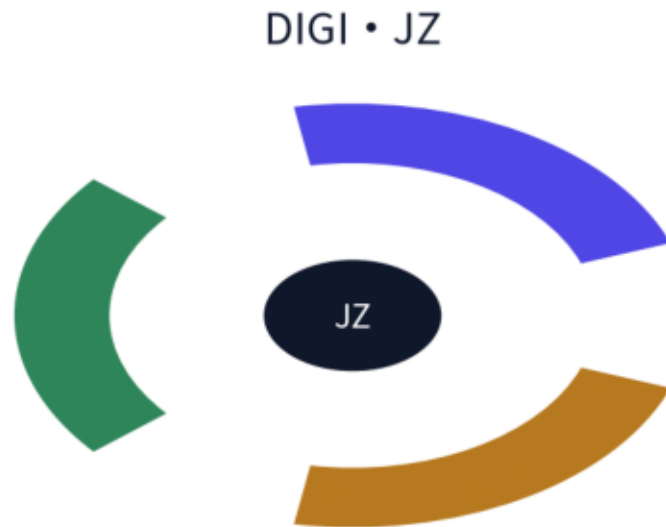

AI Innovation Ecosystem Map: base - data - models - scenarios - governance

AI protocol directions: model evaluation (benchmarks/held-out), data quality (calibre/missing marks), error stratification, runtime monitoring (false-alarm/latency), human-review-point registry

PROVISIONAL - concept boundary, not an official redline

Brand direction: DIGI • JZ (graphic grammar, colour, wayfinding extension)

Twin Hub • Sense Gallery • Co-Ops Ring
three rings on one axis; data-derived vitality

Colour palette (concept)

Typography (concept)

Headline: DIGI • JZ Digital Twin Operations

Body: Noto Sans SC / Latin sans-serif

Wayfinding extension (concept)

Bilingual, tiered guides

Prior rights: no official trademark search completed at concept stage; names and marks are internal working codenames until clearance (no external use or registration); any resemblance is coincidental and subject to later search and legal opinion.

PROVISIONAL - concept boundary, not an official redline
