

Strategy: city decision · off-site verification · approved entry

BOUNDED SKY 2.0

Every stage may conclude: do not fly

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Regulation is spatial structure, not an appendix

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Cover

Verification infrastructure for public low-altitude services under Beijing's current controls

- Not an airway proposal
- Decide in city · verify off-site · enter with approval
- Concept only

Executive summary

Beijing needs disciplined verification before central-city flight volume

- Hardian: regulation, service platform, digital base map and testing
- Real needs: emergency, fire, ecology and maintenance
- Ground rights and public space first

Legal baseline

Beijing-wide control and Sixth-Ring storage limits since 2026

- Every outdoor flight requires application
- No routine nest or depot in Jingzhang
- Special safeguard is not automatic permission

Core mechanism

The compiler turns demand into evidence and stop conditions

- Compare ground first
- One failed hard gate stops progression
- Agent advises; humans approve and command

One line · three rooms · one field · five ledgers · two wings

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Map ground rights before discussing one mission

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Brief alignment

- One public protocol connects all six Agent tasks
- Concept and identity
 - All ecosystem and scenarios
 - Public space, culture, events and long-term operation

Three scales

- 43.6 km2 research, 11.4 km2 overall, 368.4 ha key areas
- Provisional geometry is location context only
 - Closer to flight means formal authority process
 - No invented airway

Overall space

- Ground-priority mapping precedes any mission
- Walk, cycle and transit continuity
 - Schools, hospitals, communities and events
 - Heritage, blue-green and emergency access

Off-site verification

- Custody, training and failure tests belong in a compliant field
- Haidan Airport practice is a method reference
 - No claimed partnership or authorization
 - Return evidence, not commercial flights

Three key areas: city rooms without default flight

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Zhongzhiyuan

Safety Compiler Room turns R&D into auditable evidence

- Mission schema and digital twin
- Operating ID and failure injection
- No aircraft storage or default flight

AI Origin

Public Review Room for quiet, privacy, fairness and appeal

- Minimum field of view and edge processing
- Staffed non-app entry
- Objection can freeze and replay a rule

Dazhongsi

City Mission Clinic diagnoses problems, not flight throughput

- Public-service owners submit needs
- Compare ground, assisted, and no-action
- Weak public value stops progression

Twelve scenarios

Six public missions, four capability tests, two refusals

- Every card has a ground counterfactual
- Every card has success and stop conditions
- Refusal is a valid safety result

Six hard gates: budgets cannot buy permission

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Industry is an evidence interface, not a company list

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Industry validation

- Operating ID, takeover, acoustics/HF and privacy deletion
- Visible and governable
 - Failure enters a safe state
 - Purpose lock and deletion proof

Six hard gates

- Budgets cannot buy permission; efficiency cannot override safety
- Public necessity
 - Approval and accountable operator
 - Safety, privacy, human command and ground recovery

Five public budgets

- Safety, quality/ecology, privacy/data, energy/carbon, ground space
- 0-100 values are synthetic
 - Budgets do not replace legal thresholds
 - Affected groups have a stop channel

Industry ecosystem

- Evidence contracts connect R&D, operation, service and audit
- No invented company or investment list
 - Scenarios produce methods and failure cases
 - Two wings connect methods and public experience

Rail memory × Zhongguancun collaboration × AI responsibility

BOUNDED SKY 2.0

Rail: connect distance

ZGC: collaborate

AI: learn to stop

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Annual open lab: needs, rules, validation, audit

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Culture and landmarks

Rail memory, Zhongguancun collaboration, AI responsibility

- Public Stop Bell
- Sky Ledger Wall
- Ground-Air Handover Gate

Conclusion

The real innovation is a city that knows when not to fly

- Rules public
- Humans accountable
- Failure recoverable

Emergency and fire

Communications, fire and flood tasks require incident command

- Never replace emergency judgment
- Never obstruct crewed aviation or ground rescue
- Exit immediately when need ends

Medical and maintenance

Only demonstrable end-to-end benefit warrants progression

- Medical: time, chain of custody and integrity
- Inspection must close a maintenance order
- Collection without action is not success

Five evidence stages, each with an exit

BOUNDED SKY 2.0

At every stage: continue / narrow / exit

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Measure public outcomes, not flight counts

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Project packages

- Ten small packages create reusable knowledge and public interfaces
- Digital map, city rooms and mission schema
 - Off-site tests, challenge set and remedy
 - Annual cost and exit audit

Phasing

- S0-S4 has no automatic promotion; every stage can exit
- S0/S1 never touch real flight
 - S2 only at compliant field
 - S3 one approval; S4 independent review

Metrics and audit

- Measure public outcomes and exit execution, not flight count
- Benefit versus ground
 - Identification, safe failure and deletion proof
 - Noise, complaints and lifecycle cost

Real needs

- Six public missions derived from published Haidan practice
- Forest-fire patrol and firefighter training exist
 - High-rise fire, flood and emergency communications matter
 - Jingzhang suitability remains task-specific
