

Cover

Verification infrastructure for public low-altitude services under Beijing's current controls

- Not an airway proposal
- Decide in city · verify off-site · enter with approval
- Concept only

Strategy: city decision · off-site verification · approved entry

BOUNDED SKY 2.0

Every stage may conclude: do not fly

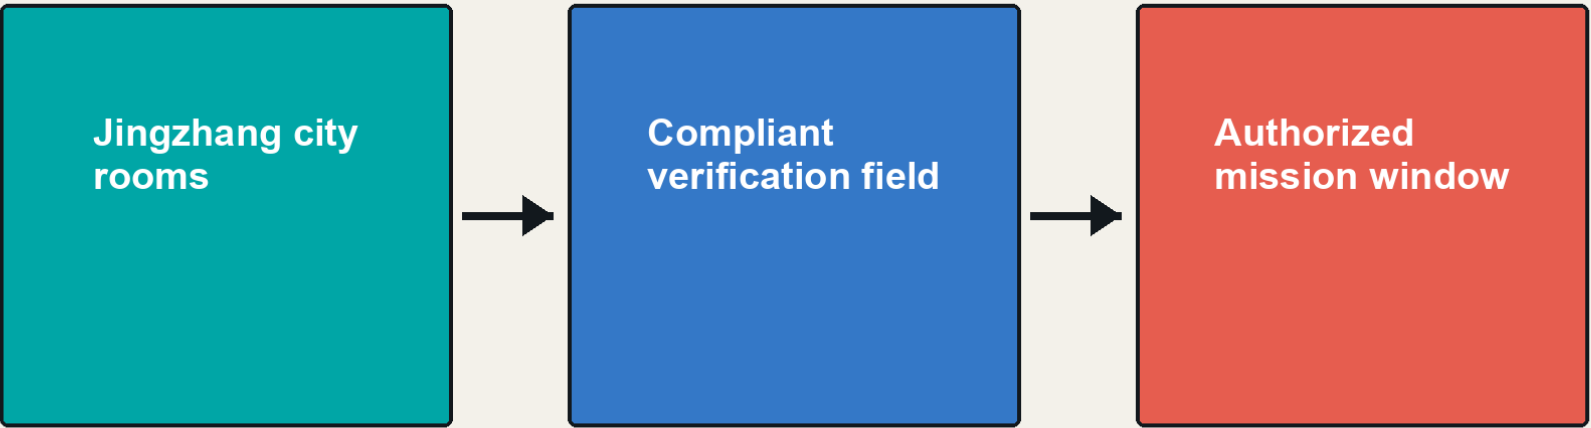

Executive summary

Beijing needs disciplined verification before central-city flight volume

- Haidian: regulation, service platform, digital base map and testing
- Real needs: emergency, fire, ecology and maintenance
- Ground rights and public space first

Strategy: city decision · off-site verification · approved entry

BOUNDED SKY 2.0

Every stage may conclude: do not fly

Brief alignment

One public protocol connects all six Agent tasks

- Concept and identity
- AI ecosystem and scenarios
- Public space, culture, events and long-term operation

One line · three rooms · one field · five ledgers · two wings

BOUNDED SKY 2.0

Ground public-life line

Safety compiler

Public review

Mission clinic

Off-site interface

Five public budgets

Legal baseline

Beijing-wide control and Sixth-Ring storage limits since 2026

- Every outdoor flight requires application
- No routine nest or depot in Jingzhang
- Special safeguard is not automatic permission

Regulation is spatial structure, not an appendix

BOUNDED SKY 2.0

National regulation

UOM & operating ID

Beijing-wide control

Safeguard / flight application

Mission accountability

Real needs

Six public missions derived from published Haidian practice

- Forest-fire patrol and firefighter training exist
- High-rise fire, flood and emergency communications matter
- Jingzhang suitability remains task-specific

Twelve tasks: six public · four tests · two rejections

BOUNDED SKY 2.0

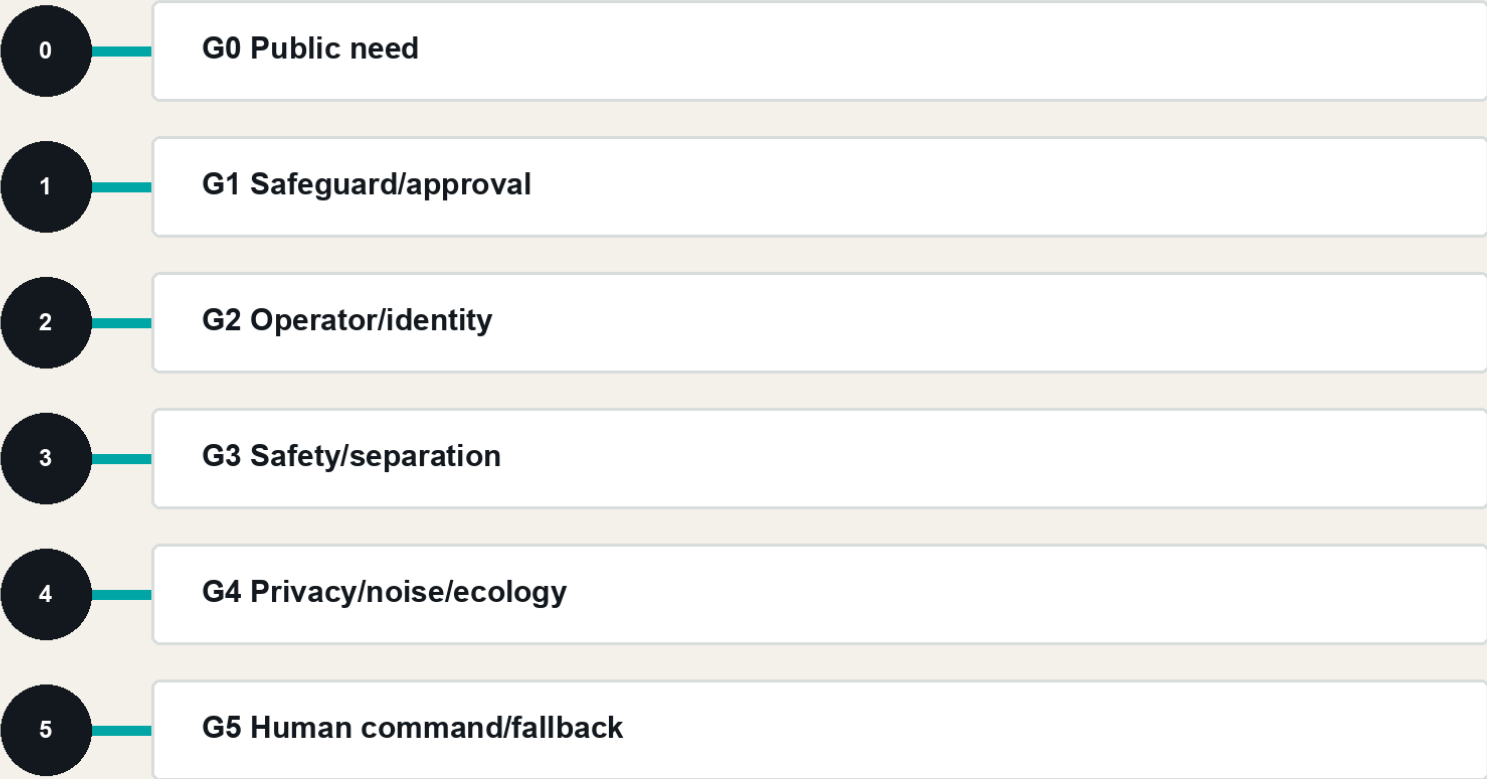

Core mechanism

The compiler turns demand into evidence and stop conditions

- Compare ground first
- One failed hard gate stops progression
- Agent advises; humans approve and command

Six hard gates: budgets cannot buy permission

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

CONCEPT ONLY | NOT AN AUTHORIZATION, APPROVAL, OR IMPLEMENTATION COMMITMENT

Three scales

43.6 km2 research, 11.4 km2 overall, 368.4 ha key areas

- Provisional geometry is location context only
- Closer to flight means formal authority process
- No invented airway

One line · three rooms · one field · five ledgers · two wings

BOUNDED SKY 2.0

Ground public-life line

Safety compiler

Public review

Mission clinic

Off-site interface

Five public budgets

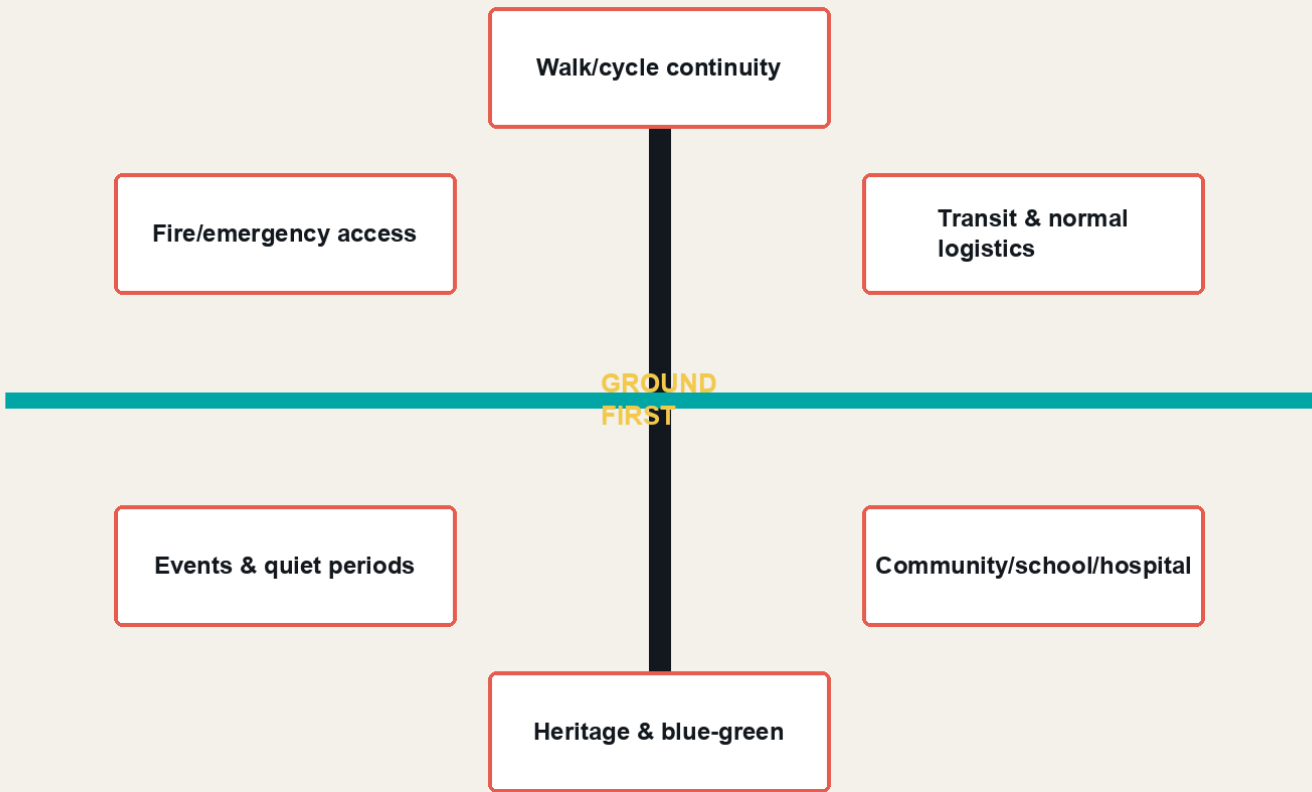

Overall space

Ground-priority mapping precedes any mission

- Walk, cycle and transit continuity
- Schools, hospitals, communities and events
- Heritage, blue-green and emergency access

Map ground rights before discussing one mission

BOUNDED SKY 2.0

Zhongzhiyuan

Safety Compiler Room turns R&D into auditable evidence

- Mission schema and digital twin
- Operating ID and failure injection
- No aircraft storage or default flight

Three key areas: city rooms without default flight

BOUNDED SKY 2.0

Zhongzhiyuan
Safety compiler

AI Origin
Public review

Dazhongsi
Mission clinic

Compliant field
Flight validation

AI Origin

Public Review Room for quiet, privacy, fairness and appeal

- Minimum field of view and edge processing
- Staffed non-app entry
- Objection can freeze and replay a rule

Three key areas: city rooms without default flight

BOUNDED SKY 2.0

Zhongzhiyuan
Safety compiler

AI Origin
Public review

Dazhongsi
Mission clinic

Compliant field
Flight validation

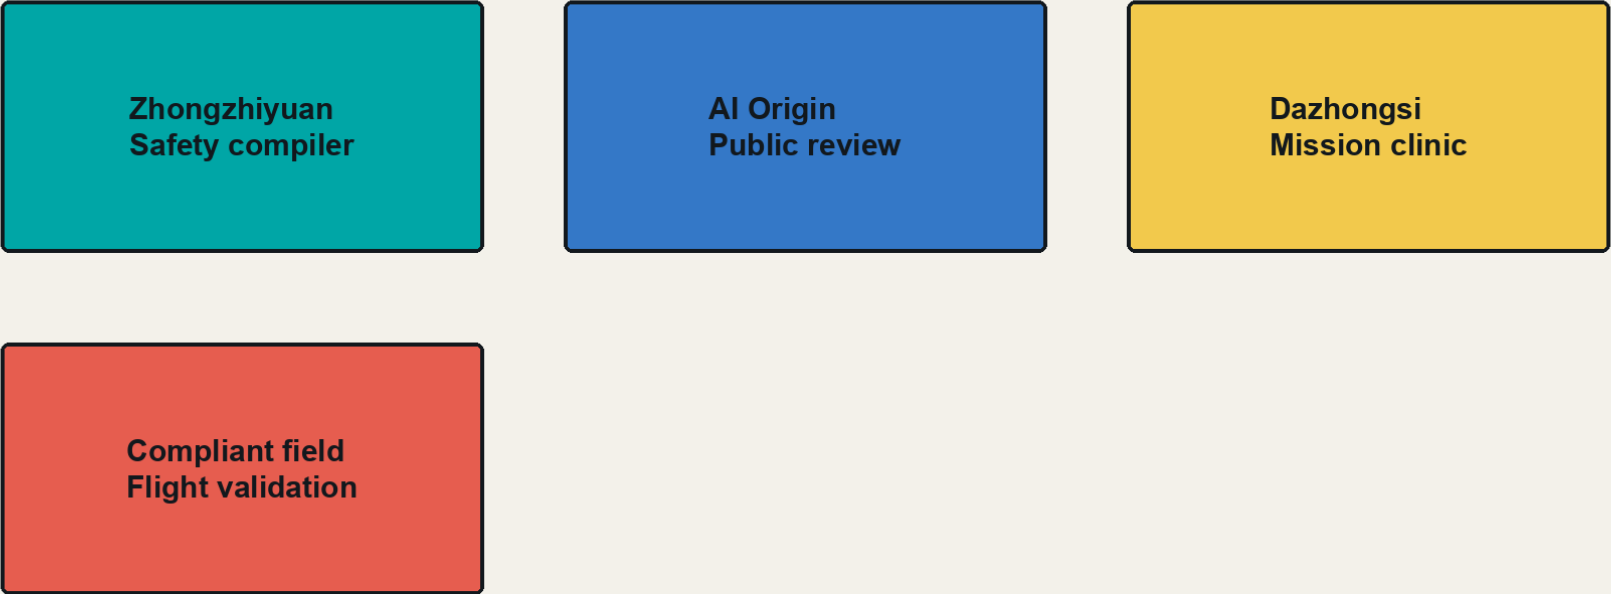

Dazhongsi

City Mission Clinic diagnoses problems, not flight throughput

- Public-service owners submit needs
- Compare ground, assisted, and no-action
- Weak public value stops progression

Three key areas: city rooms without default flight

BOUNDED SKY 2.0

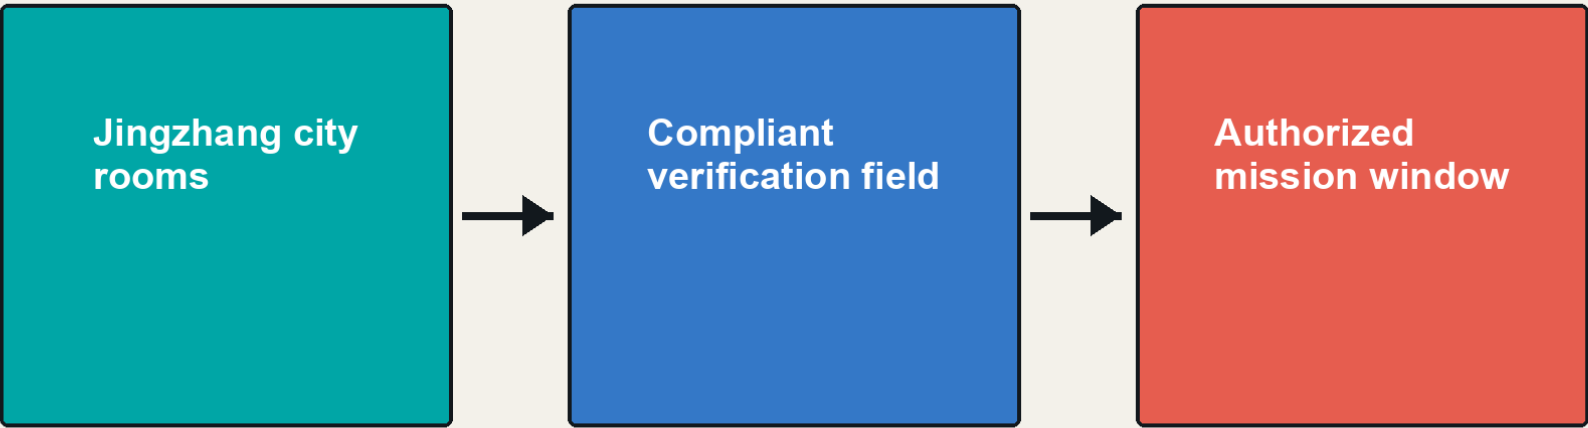

Off-site verification

Custody, training and failure tests belong in a compliant field

- Haidian Airport practice is a method reference
- No claimed partnership or authorization
- Return evidence, not commercial flights

Strategy: city decision · off-site verification · approved entry

BOUNDED SKY 2.0

Every stage may conclude: do not fly

Twelve scenarios

Six public missions, four capability tests, two refusals

- Every card has a ground counterfactual
- Every card has success and stop conditions
- Refusal is a valid safety result

Twelve tasks: six public · four tests · two rejections

BOUNDED SKY 2.0

01 Comms relay	02 Fire recon	03 Medical urgent	04 Flood map
05 Green patrol	06 Asset inspect	07 Operating ID	08 Link/takeover
09 Acoustic/HF	10 Ground recovery	11 Food/ads ×	12 Passenger fun ×

Emergency and fire

Communications, fire and flood tasks require incident command

- Never replace emergency judgment
- Never obstruct crewed aviation or ground rescue
- Exit immediately when need ends

Twelve tasks: six public · four tests · two rejections

BOUNDED SKY 2.0

Medical and maintenance

Only demonstrable end-to-end benefit warrants progression

- Medical: time, chain of custody and integrity
- Inspection must close a maintenance order
- Collection without action is not success

Twelve tasks: six public · four tests · two rejections

BOUNDED SKY 2.0

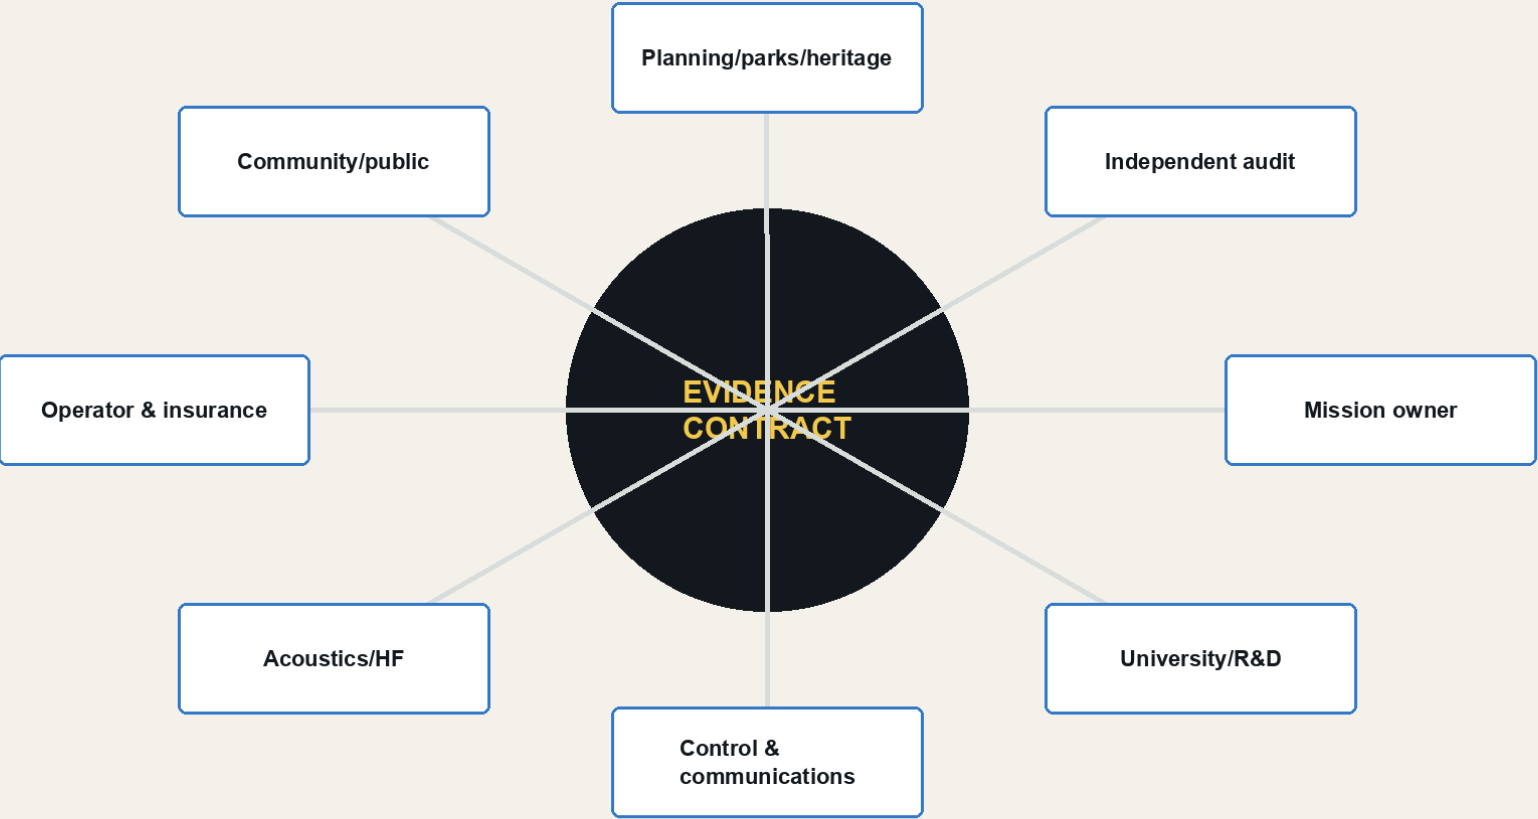

Industry validation

Operating ID, takeover, acoustics/HF and privacy deletion

- Visible and governable
- Failure enters a safe state
- Purpose lock and deletion proof

Industry is an evidence interface, not a company list

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

CONCEPT ONLY | NOT AN AUTHORIZATION, APPROVAL, OR IMPLEMENTATION COMMITMENT

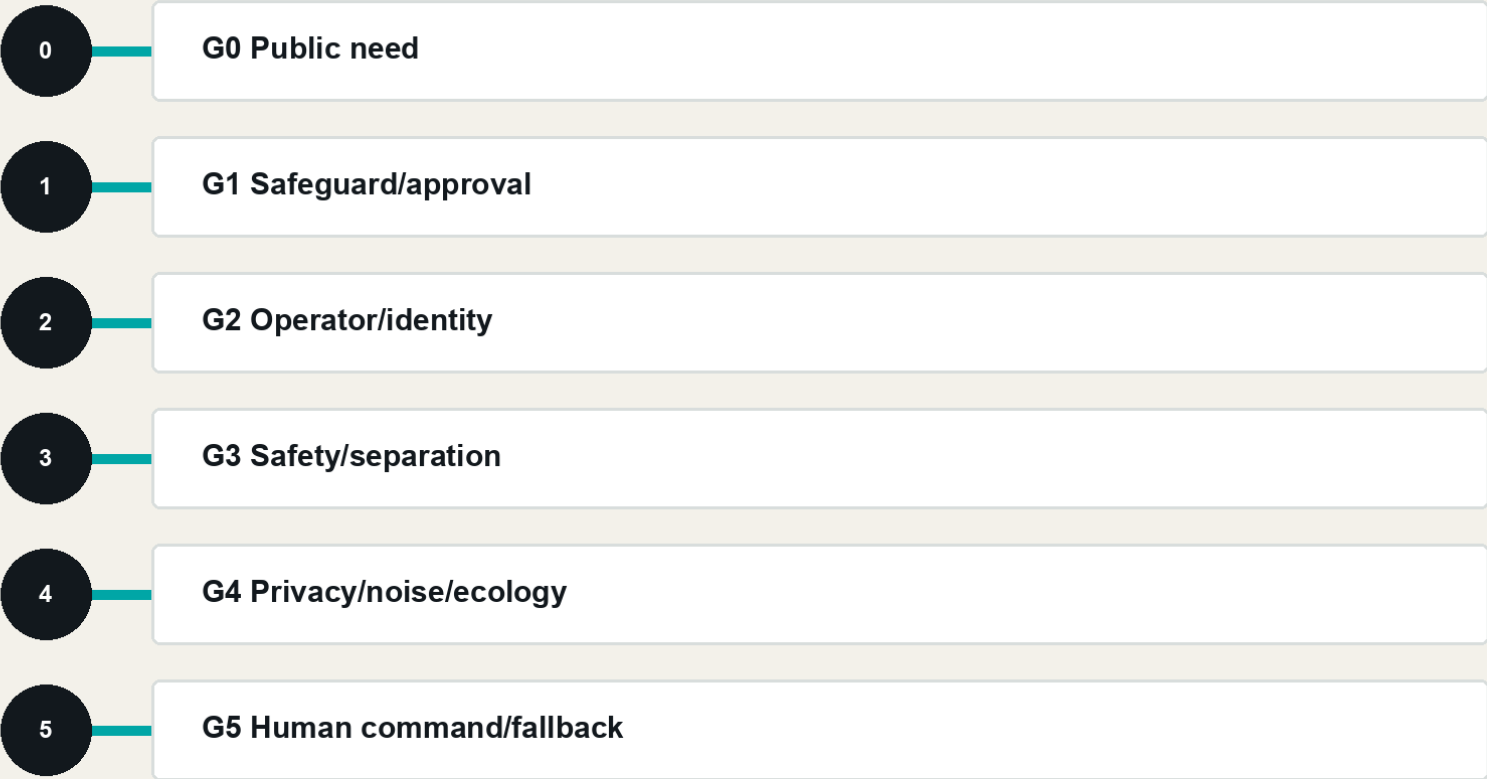

Six hard gates

Budgets cannot buy permission; efficiency cannot override safety

- Public necessity
- Approval and accountable operator
- Safety, privacy, human command and ground recovery

Six hard gates: budgets cannot buy permission

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

CONCEPT ONLY | NOT AN AUTHORIZATION, APPROVAL, OR IMPLEMENTATION COMMITMENT

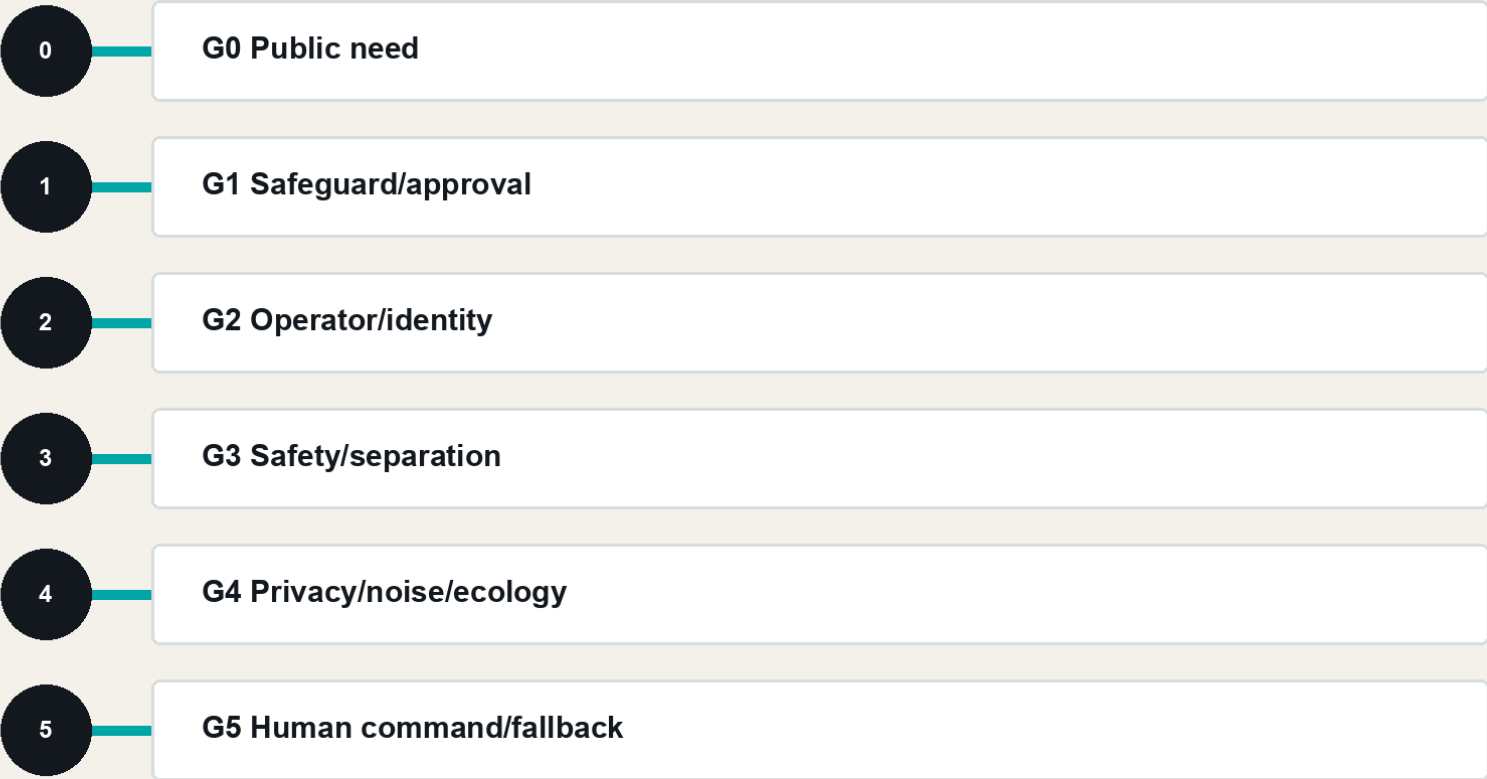

Five public budgets

Safety, quiet/ecology, privacy/data, energy/carbon, ground space

- 0-100 values are synthetic
- Budgets do not replace legal thresholds
- Affected groups have a stop channel

Six hard gates: budgets cannot buy permission

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

CONCEPT ONLY | NOT AN AUTHORIZATION, APPROVAL, OR IMPLEMENTATION COMMITMENT

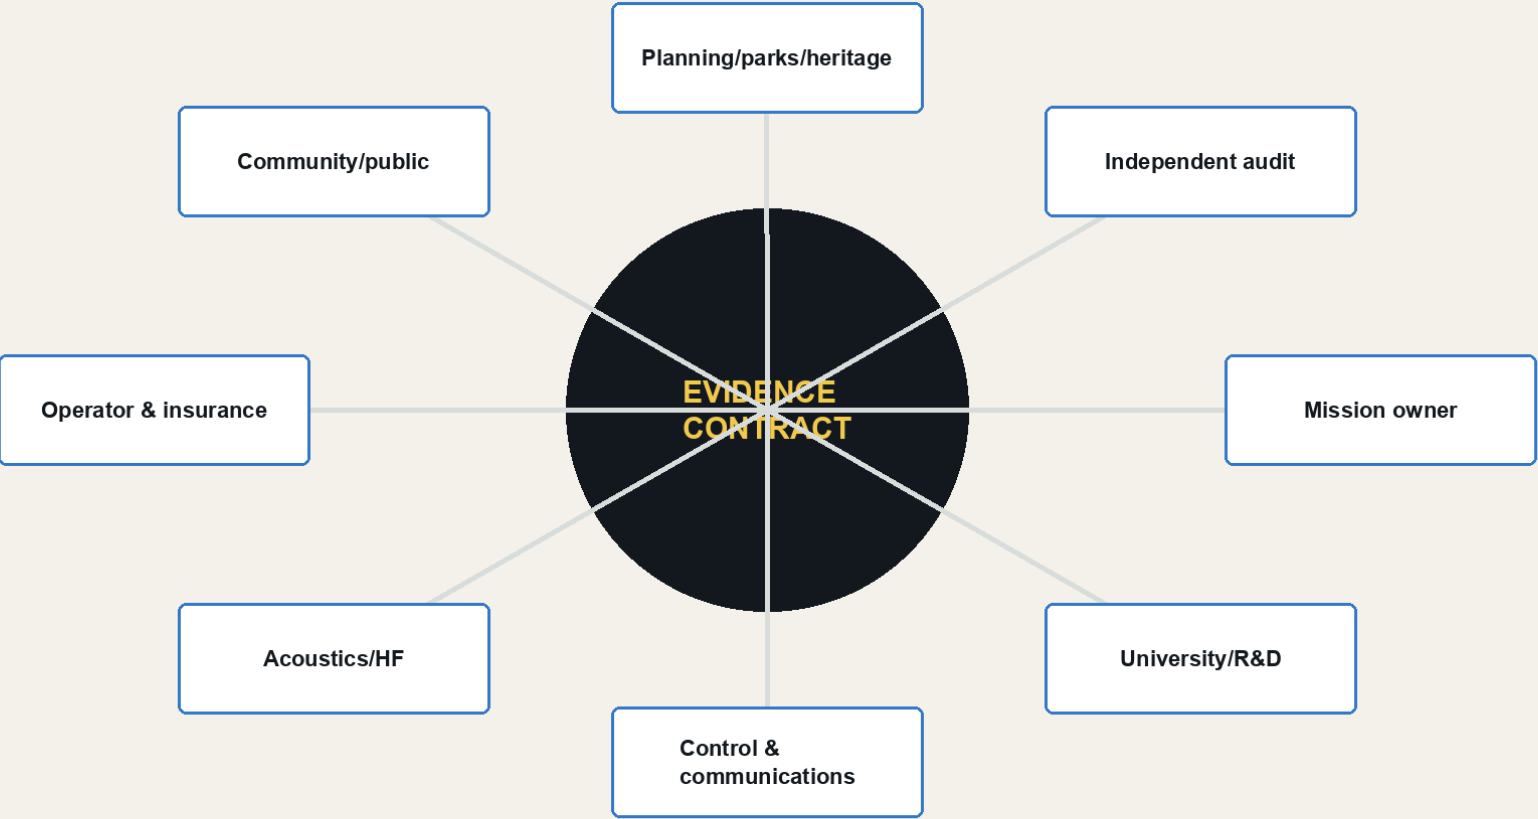

Industry ecosystem

Evidence contracts connect R&D, operation, service and audit

- No invented company or investment list
- Scenarios produce methods and failure cases
- Two wings connect methods and public experience

Industry is an evidence interface, not a company list

BOUNDED SKY 2.0

Culture and landmarks

Rail memory, Zhongguancun collaboration, AI responsibility

- Public Stop Bell
- Sky Ledger Wall
- Ground-Air Handover Gate

Rail memory × Zhongguancun collaboration × AI responsibility

BOUNDED SKY 2.0

Rail: connect distance

ZGC: collaborate

AI: learn to stop

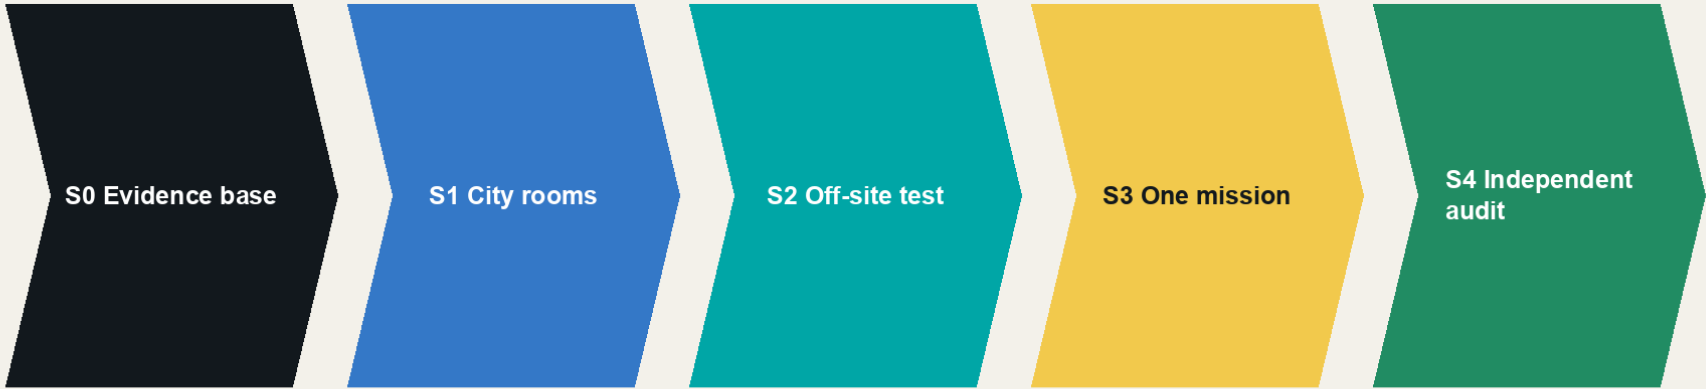

Project packages

Ten small packages create reusable knowledge and public interfaces

- Digital map, city rooms and mission schema
- Off-site tests, challenge set and remedy
- Annual cost and exit audit

Five evidence stages, each with an exit

BOUNDED SKY 2.0

At every stage: continue / narrow / exit

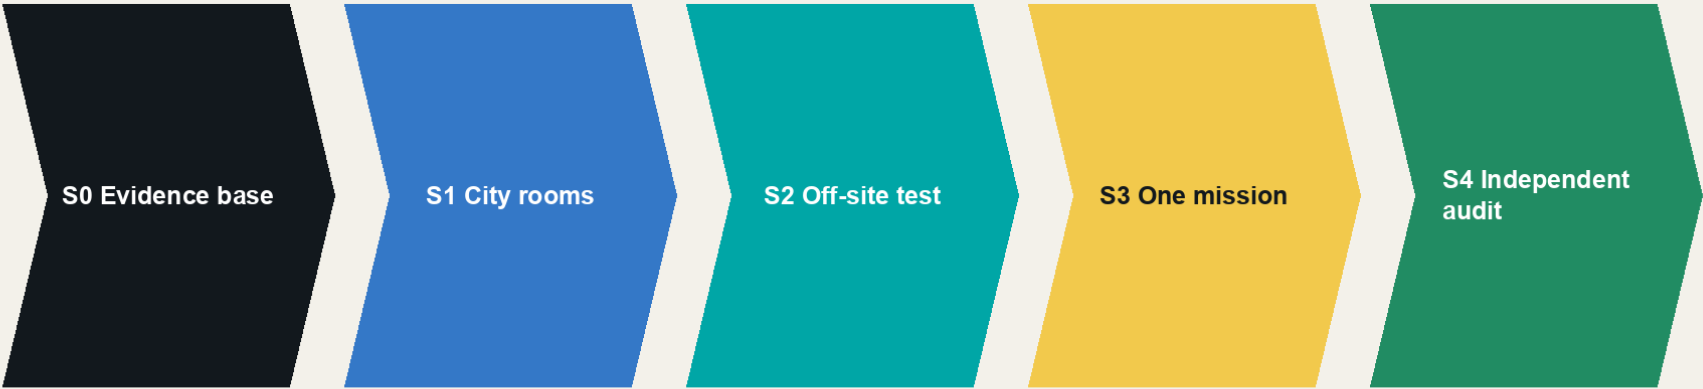

Phasing

S0-S4 has no automatic promotion; every stage can exit

- S0/S1 never touch real flight
- S2 only at compliant field
- S3 one approval; S4 independent review

Five evidence stages, each with an exit

BOUNDED SKY 2.0

At every stage: continue / narrow / exit

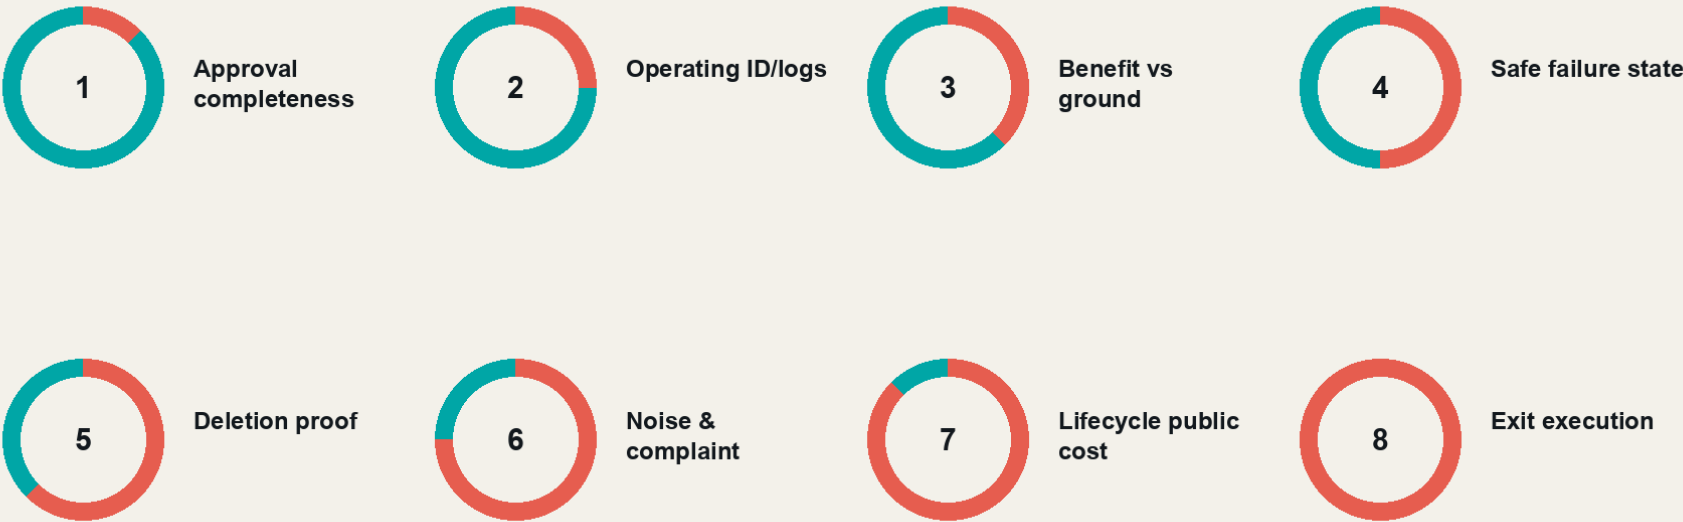

Metrics and audit

Measure public outcomes and exit execution, not flight count

- Benefit versus ground
- Identification, safe failure and deletion proof
- Noise, complaints and lifecycle cost

Measure public outcomes, not flight counts

BOUNDED SKY 2.0

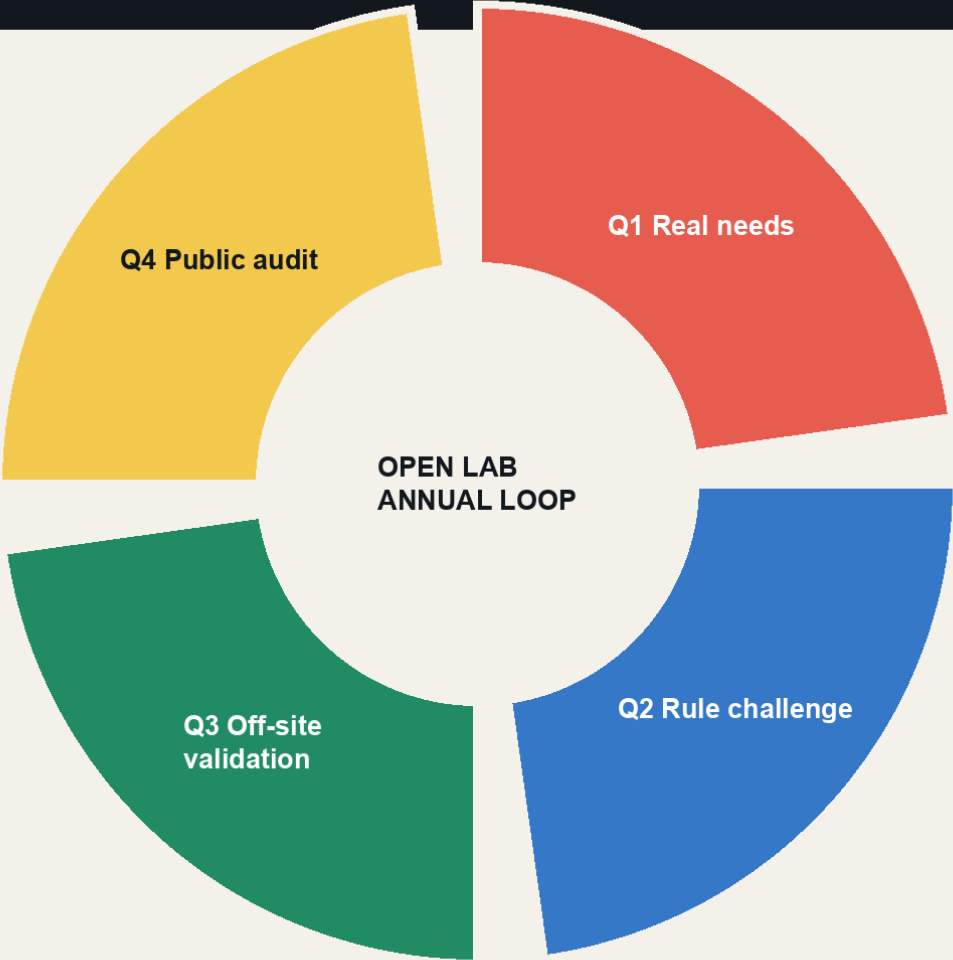

Conclusion

The real innovation is a city that knows when not to fly

- Rules public
- Humans accountable
- Failure recoverable
- Public can stop

Annual open lab: needs, rules, validation, audit

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

CONCEPT ONLY | NOT AN AUTHORIZATION, APPROVAL, OR IMPLEMENTATION COMMITMENT
