

PARALLAX JING-ZHANG

TURNING DISAGREEMENT INTO A PUBLIC DESIGN RESOURCE

One city, more than one answer. Models, professional judgement, operational feedback and lived experience are made visible, comparable and revisable.

AI does not answer for the city. Different answers become visible.

One Parallax Corridor, two parallel experience lines, three Plural Futures Yards, five Comparison Windows and twelve same-question/different-view scenarios.

Uncertainty moves from the footnote into public space. Every display must show who benefits, who does not, when humans review it, and how the project can stop.

MODEL LINE: metrics / inference / failure envelopes

LIVED LINE: walking / care / accessibility / adoption

WINDOW: baseline / proposal / alternative / user perspectives

FROM INNOVATION ECOSYSTEM TO EVERYDAY LIFE

The same parallax review applies across three scales. Concept cells cover the provisional design extent without pretending to be statutory redlines.

43.6 km² / coordinated research

11.41 km² / provisional overall design

368.4 ha / three key areas

12 TOPOLOGY-SAFE CELLS

research → design → prototype

THREE PLURAL FUTURES YARDS - NO PERMANENT SINGLE ANSWER

Each yard turns research, public judgement and real adoption into a spatial chain that can be revisited.

01 Model Divergence Yard

Compare outputs, latency, energy and failure envelopes

02 Civic Parallax Forum

Researchers, experts, operators and residents read one question

03 Adoption Afterimage Market

Compare promises, real burdens, beneficiaries and exit choices

CONCEPTUAL SPATIAL VISUALIZATION - NOT EXISTING CONDITIONS OR APPROVAL EVIDENCE

FIVE COMPARISON WINDOWS MAKE EXPERIENCE EVIDENCE

Accessibility is not one score: navigation models are read beside wheelchair, care, night-shift, resident and visitor experience.

1 An equivalent route without a phone

2 Human review and appeal

3 Shade / rest / slope / lighting

4 Stop triggers before expansion

5 Promises versus lived adoption

12 scenarios span street Q&A, post-rain field checks and phone-free wayfinding through seven-day device reviews and three-panel renewal alternatives.

KNOWN, UNKNOWN, REVISABLE

Precision comes from sources, geometry, metrics and review - not extra decimal places. Start with reversible pilots; expand, alter or remove by evidence.
