

PARALLAX JING-ZHANG

PARALLAX JING-ZHANG / CONCEPT EVIDENCE

ONE QUESTION, MULTIPLE VIEWS

Two parallel experience lines, three plural-futures yards, and five comparison windows. Provisional geometry; not an official redline.

MODEL LINE

Metrics / simulations / failure envelopes

LIVED LINE

Walking / care / access / adoption

COMPARISON WINDOWS

Baseline / proposal / alternative / personas

A public design protocol that keeps model outputs, professional judgment, operating feedback, and lived experience visibly comparable.

PROVISIONAL / CONCEPT / REVISABLE

WHY PARALLAX

PARALLAX JING-ZHANG / CONCEPT EVIDENCE

KNOWN / UNKNOWN / REVISABLE

Precision is earned through source, geometry, formula, assumption, and review—not through extra decimal places.

11.41 km²

provisional site

10.1%

design green ratio

3 / 5 / 12

yards / windows / scenarios

UNKNOWN

FAR · height · statutory green ratio ·
road redlines · utilities · parcel-level
demolition

EVIDENCE CHAIN

source → assumption → geometry → metric
→ figure → review → revision

Official polygons can replace provisional
geometry without hiding what changed.

A scan of 507 public proposals showed a crowded field of spines, standards, truth, gauges, and version protocols. Parallax does not compete by claiming a better single answer; it designs the civic capacity to keep multiple accountable answers in view.

ONE CORRIDOR · THREE YARDS · FIVE WINDOWS

PARALLAX JING-ZHANG / CONCEPT EVIDENCE

FROM ECOSYSTEM TO DAILY LIFE

The three scopes share one parallax review. Twelve topology-safe concept cells cover the provisional design area.

43.6 km²
Coordinated research
ecosystem / identity / global links

≈11.4 km²
Overall design
renewal / public realm / infrastructure

≈368.4 ha
Three key areas
prototypes / operation / review

The Model Line and Lived Line are connected by five transverse comparison windows. Three plural-futures yards host model divergence, civic interpretation, and adoption afterimages.

THREE KEY-AREA PROTOTYPES

PARALLAX JING-ZHANG / CONCEPT EVIDENCE

THREE PLURAL-FUTURES YARDS

Each yard preserves multiple testable futures instead of announcing a single winner.

01

MODEL DIVERGENCE YARD

Compare outputs, latency, energy, and failure envelopes.

02

CIVIC PARALLAX FORUM

Developer, professional, operator, and resident read one issue together.

03

ADOPTION AFTERIMAGE MARKET

Compare promises with observed burdens, benefits, and exit options.

Zhongzhiyuan compares stacks and failure envelopes. The AI Origin Community keeps four roles around one issue. Dazhongsi compares promises with the consequences of adoption. All locations remain provisional.

MOBILITY, GREEN, AND PUBLIC LIFE

PARALLAX JING-ZHANG / CONCEPT EVIDENCE

ACCESS IS A COMPARISON, NOT A SCORE

Five windows compare route models with wheelchair, carer, night-worker, resident, and visitor experience.

FIVE REVIEW QUESTIONS

- 1 No-smartphone equivalent
- 2 Human review and complaint route
- 3 Shade, rest, gradient, lighting
- 4 Stop trigger before expansion

Concept routes, not engineered alignments.

Five walks compare route predictions with wheelchair, carer, night-worker, resident, and visitor experience. Green and public-space unions are recalculated independently to avoid double counting.

EVIDENCE, PHASING, AND EXIT

PARALLAX JING-ZHANG / CONCEPT EVIDENCE

KNOWN / UNKNOWN / REVISABLE

Precision is earned through source, geometry, formula, assumption, and review—not through extra decimal places.

11.41 km²

provisional site

10.1%

design green ratio

3 / 5 / 12

yards / windows / scenarios

UNKNOWN

FAR · height · statutory green ratio ·
road redlines · utilities · parcel-level
demolition

EVIDENCE CHAIN

source → assumption → geometry → metric
→ figure → review → revision

Official polygons can replace provisional
geometry without hiding what changed.

Known metrics come from geometry. FAR, height, statutory green ratio, redlines, utilities, and parcel demolition remain unknown. Each phase has an evidence gate and may stop, change, or be removed.
