

Industrial infrastructure that returns urban AI equipment to accountable service

JING-ZHANG RETURN-TO-SERVICE WORKS

Industrial infrastructure that returns urban AI equipment to accountable service

CONCEPTUAL DISPLAY | provisional rough boundaries, not official planning lines

01 / SYSTEM + SPACE

RETURN TO SERVICE / COMPLIANT HANDOVER

A civic repair spine connects public service, industrial collaboration, and controlled workflows

01 ZHONGZHIYUAN | system diagnostics and localization instruments, protocols, and standards
02 JIANGSU | public interface and repair tools
03 DAZHONGSI | terminal after-sales and circular repair

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

COMMUNITY-DISPLAY-ONLY · 2026-08-14

Separate known design quantities, pending statutory controls, and operational evidence

05 / METRICS + EVIDENCE

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

COMMUNITY-DISPLAY-ONLY · 2026-08-14

- Report—warranty/after-sales—replace—remanufacture—calibrate—recertify—return.
- Co-repair and mending the city open the public interface; parts, pools, and remanufacturing form the industrial core.

EVIDENCE | 27 sources · 23 mapped tasks · 15 complete design-depth items · 9 GeoJSON files

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

02 OVERALL DESIGN | one spine, three works, nine zones, two circuits

Industrial infrastructure that returns urban AI equipment to accountable service

Nine zones form a spatial service process, not a set of generic industry labels

Land uses are clipped by the provisional boundary; nine polygons cover it with 0.001 sqm gap and zero overlap

02 / LAND USE + PROCESS

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

COMMUNITY-DISPLAY-ONLY · 2026-08-14

JING-ZHANG RETURN-TO-SERVICE WORKS

Industrial infrastructure that returns urban AI equipment to accountable service

01 / SYSTEM + SPACE

CONCEPTUAL DISPLAY | provisional rough boundaries, not official planning lines

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

03 KEY AREAS | three return-to-service works and fifteen modules

Industrial infrastructure that returns urban AI equipment to accountable service

Three key areas share five equipment families while specialising in different return stages

03 / THREE WORKS + 15 MODULES

The fifteen microfactory modules are conceptual programme placeholders, not surveyed buildings or approved works

CONCEPTUAL DISPLAY | provisional rough boundaries, not official planning lines

ZHONGZHIYUAN | system diagnostics and recertification

1.929 km² · PROVISIONAL

AI ORIGIN | instruments, protocols, and skills

1.043 km² · PROVISIONAL

DAZHONGSI | terminal after-sales and circular procurement

0.720 km² · PROVISIONAL

1 Robots/mobile 2 Scientific instruments 3 Edge AI/sensors 4 Public-service equipment 5 Shared parts/spares

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

COMMUNITY-DISPLAY-ONLY · 2026-08-14

Nine zones form a spatial service process, not a set of generic industry labels

02 / LAND USE + PROCESS

Land uses are clipped by the provisional boundary; nine polygons cover it with 0.001 sqm gap and zero 6m buffer

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

COMMUNITY-DISPLAY-ONLY · 2026-08-14

- Three landmarks: Centennial Maintenance Hall, Interchangeable Parts Commons, and Return-to-Service Square.
- All three extents remain provisional rough polygons.

EVIDENCE | 27 sources · 23 mapped tasks · 15 complete design-depth items · 9 GeoJSON files

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

Three key areas share five equipment families while specialising in different return stages

03 / THREE WORKS + 15 MODULES

The fifteen microfactory modules are conceptual programme placeholders, not surveyed buildings or approved planning lines

- Four of twelve cards are industry testing and validation scenarios.
- Seven personas include non-app, accessibility, and resident users.
- AI remains explainable with human takeover.

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

Industrial infrastructure that returns urban AI equipment to accountable service

Public movement, ordinary equipment logistics, and licensed outbound transfers remain separated

04 / MOBILITY + BLUE-GREEN

Roads are conceptual centre lines, not road red lines, engineered sections, or confirmed station links

CONCEPTUAL DISPLAY | provisional rough boundaries, not official planning lines

Source: submission GeoJSON, metrics, matrices, and narrative. Figures aid reading and do not replace machine evidence.

The fifteen microfactory modules are conceptual programme placeholders, not surveyed buildings or approved works

CONCEPTUAL DISPLAY | provisional rough boundaries, not official planning lines

- The civic spine links walking, cycling, intake, learning, and asset-passport interpretation.
- Equipment logistics cannot occupy the public promenade.
- Character: railway maintenance works × precision industrial atlas.
