

Jing-Zhang Open Ledger: A Traceable AI Public-Return Belt

A0 Board | one line, three ledgers, five gates, and a traceable public return

Design proposition

An AI deployment is a public receipt that can be read, questioned, paused, and reviewed.

Spatial structure

One line links three ledgers; five gates stage source, test, release, review, and return.

Verification Commons

Model boundary, energy note, red-team review, and learning meet on a walkable public edge.

Translation Commons

Research language becomes understandable and contestable to every day users.

Return Commons

Jobs, services, small-business tools, and shared maintenance become public return.

Ten scenario cards

Learning, entrepreneurship, accessibility, heritage, low-carbon compute, safety, maintenance, and language.

Recalculation

Provisional site area 11,412,825 m²; spatial values derive from provisional geometry.

Risk

Data precision, algorithmic service, and maintenance each have review and stop conditions.
