

Jing-Zhang Open Ledger: A Traceable AI Public-Return Belt

A3 Booklet | proposition and structure

Design proposition

An AI deployment is a public receipt that can be read, questioned, pa used, and reviewed.

Spatial structure

One line links three ledgers; five gates stage source, test, release, review , and return.

Boundary statement

The drawings use public provisional geometry and must be replaced w hen official material arrives.

Package structure

Narrative, GeoJSON, metrics, matrices, static HTML, and drawings rema in cross-readable.

Jing-Zhang Open Ledger: A Traceable AI Public-Return Belt

A3 Booklet | three civic commons

Verification Commons

Model boundary, energy note, red-team review, and learning meet on a walkable public edge.

Translation Commons

Research language becomes understandable and contestable to everyday users.

Return Commons

Jobs, services, small-business tools, and shared maintenance become public return.

Three landmarks

Window, bell arcade, and return station are interfaces for stewardship and review.

Jing-Zhang Open Ledger: A Traceable AI Public-Return Belt

A3 Booklet | scenarios, testing, operation

Ten scenario cards

Learning, entrepreneurship, accessibility, heritage, low-carbon compute, safety, maintenance, and language.

Three tests

Red team, resident comprehension, and service-return review all include exit and human alternatives.

Five personas

Researchers, founders, students/developers, residents, and service or small-business workers.

Operating rhythm

Protocol and prototype, then translation network, then public return catalogue—with pause conditions.

Jing-Zhang Open Ledger: A Traceable AI Public-Return Belt

A3 Booklet | metrics, risk, next step

Recalculation

Provisional site area 11,412,825 m²; spatial values derive from provisional geometry.

Blue-green and public realm

Concept green ratio 15.37%; public-space ratio 1.75%.

Risk

Data precision, algorithmic service, and maintenance each have review and stop conditions.

Next step

Replace provisional inputs with official boundary, survey, statutory controls, and engineering data for professional review.
