

Zhichun Road Smart-Core — Transit-Hub Station-City Integration & AI Mobility Services (Concept)

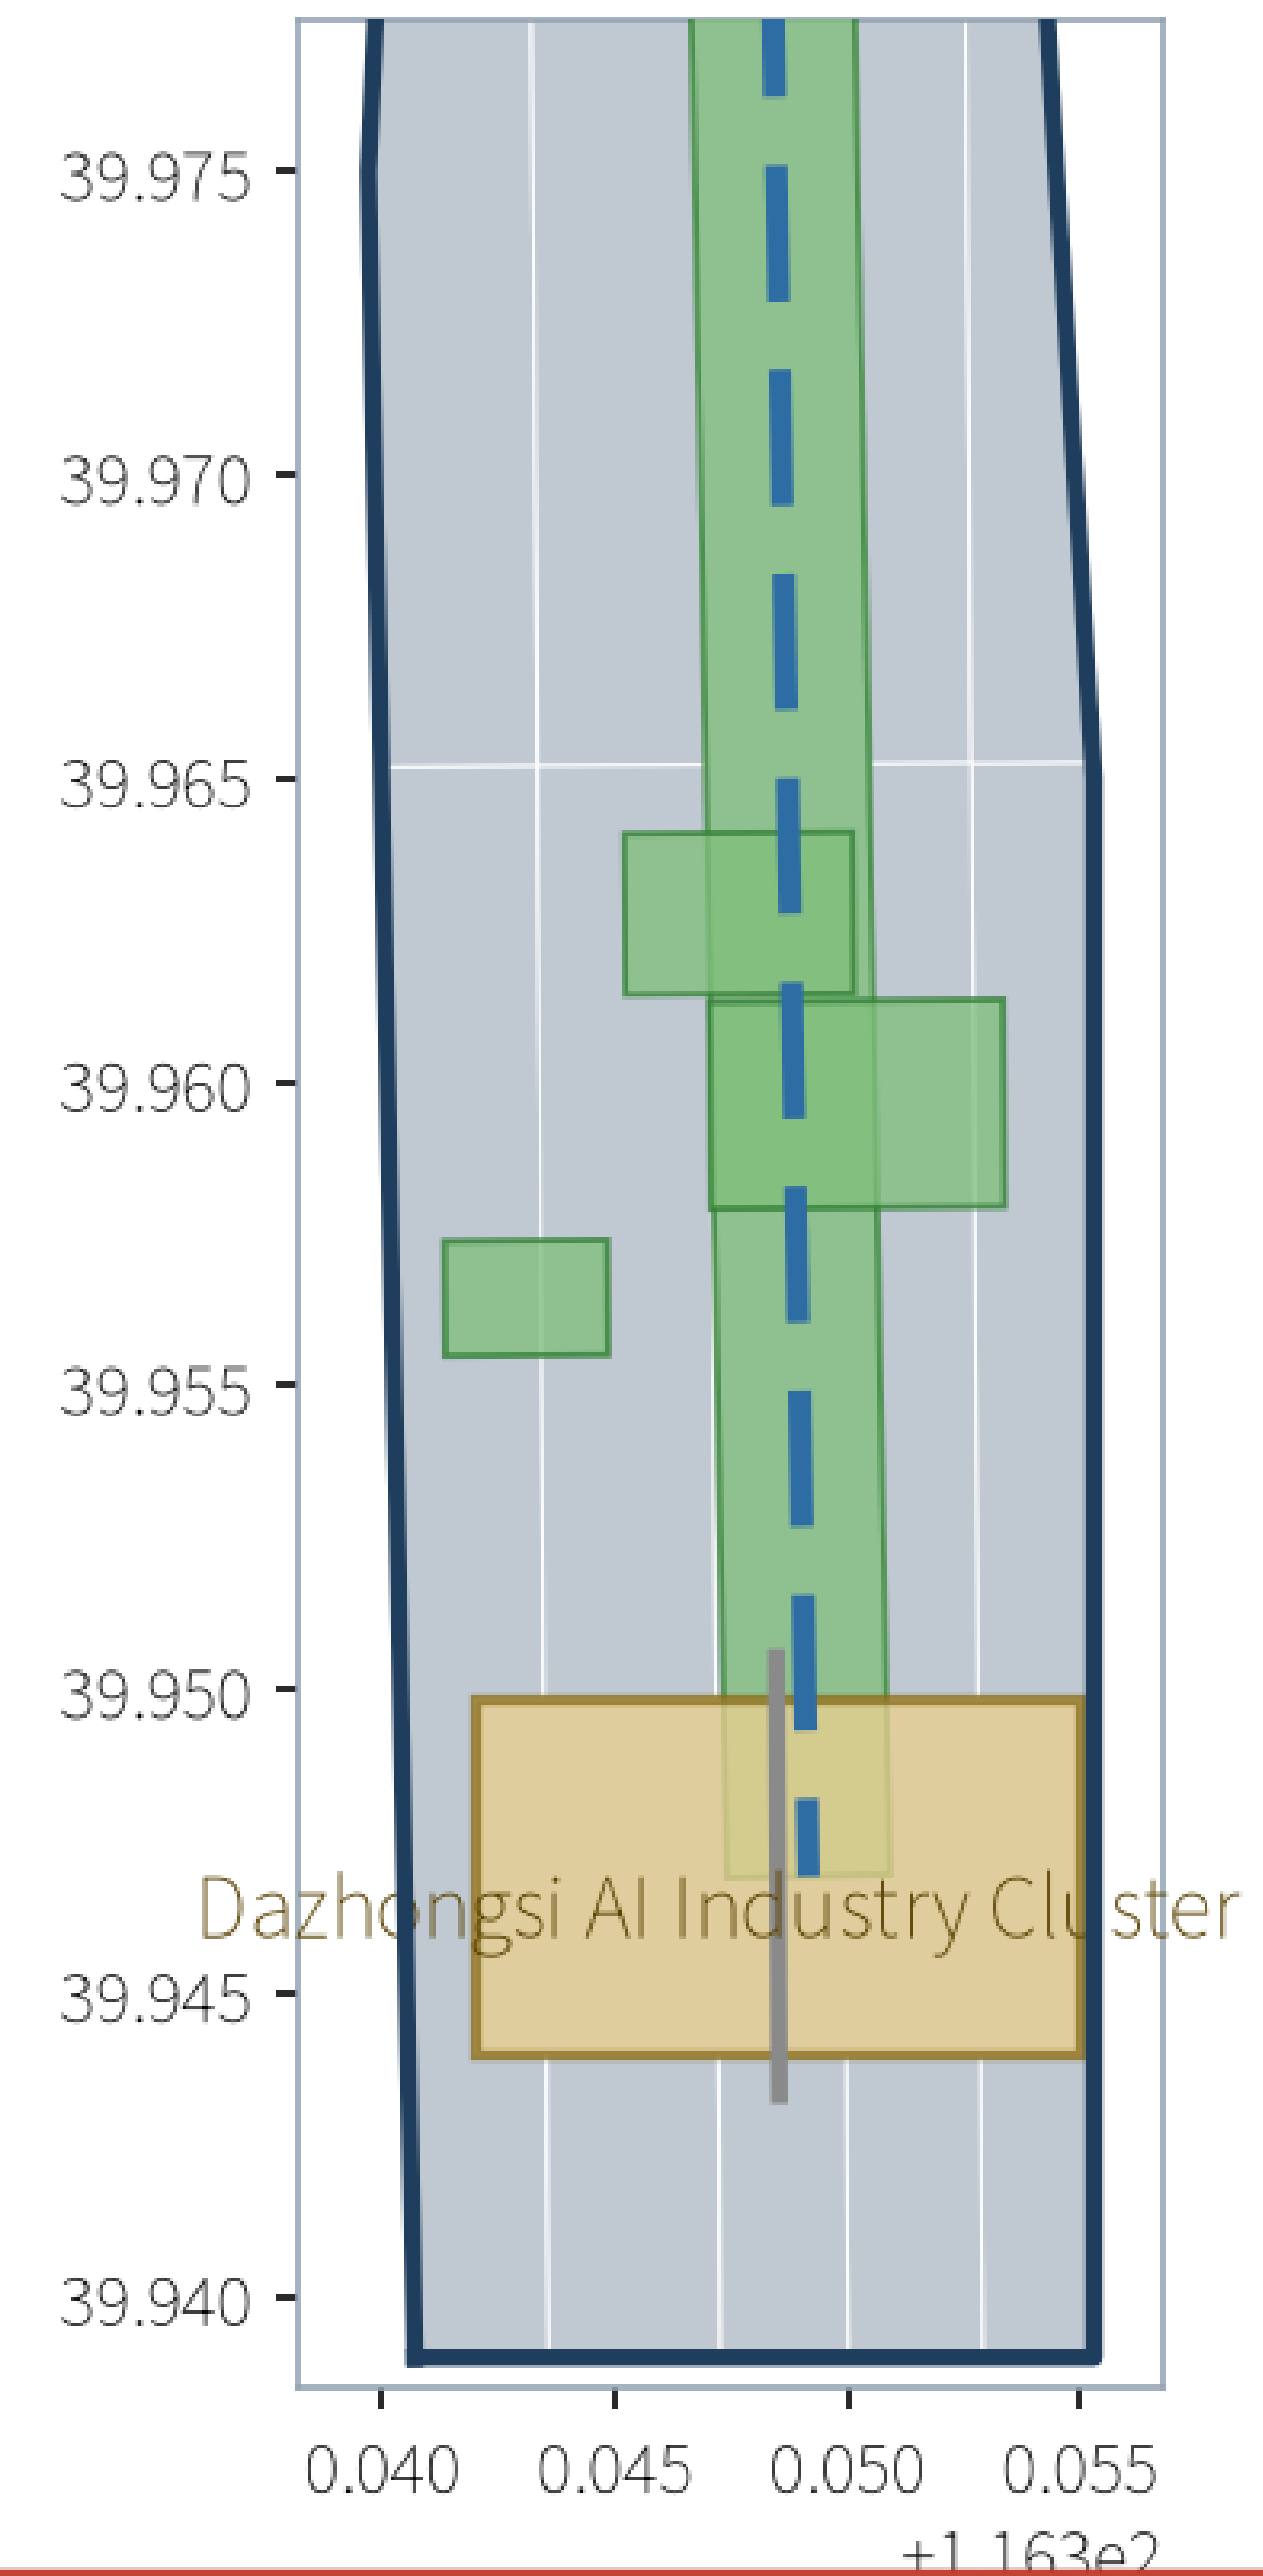

Segment N • Zhongzhiyuan

Segment M • Smart-Core station domain

Segment S • Dazhongsi

Overall Design Scope Overview (Provisional concept boundary • Not an official redline • Recompute after official data release)

Concept suggestion • reference proposal • all geometry provisional; overall recompute after official data release

Overall design scope: three official levels + station-domain sub-scope (provisional geometry)

Unified numbering: N1-N3 are the three station-domain chain nodes only; the three official key areas are labelled by official names as coordination coordinates

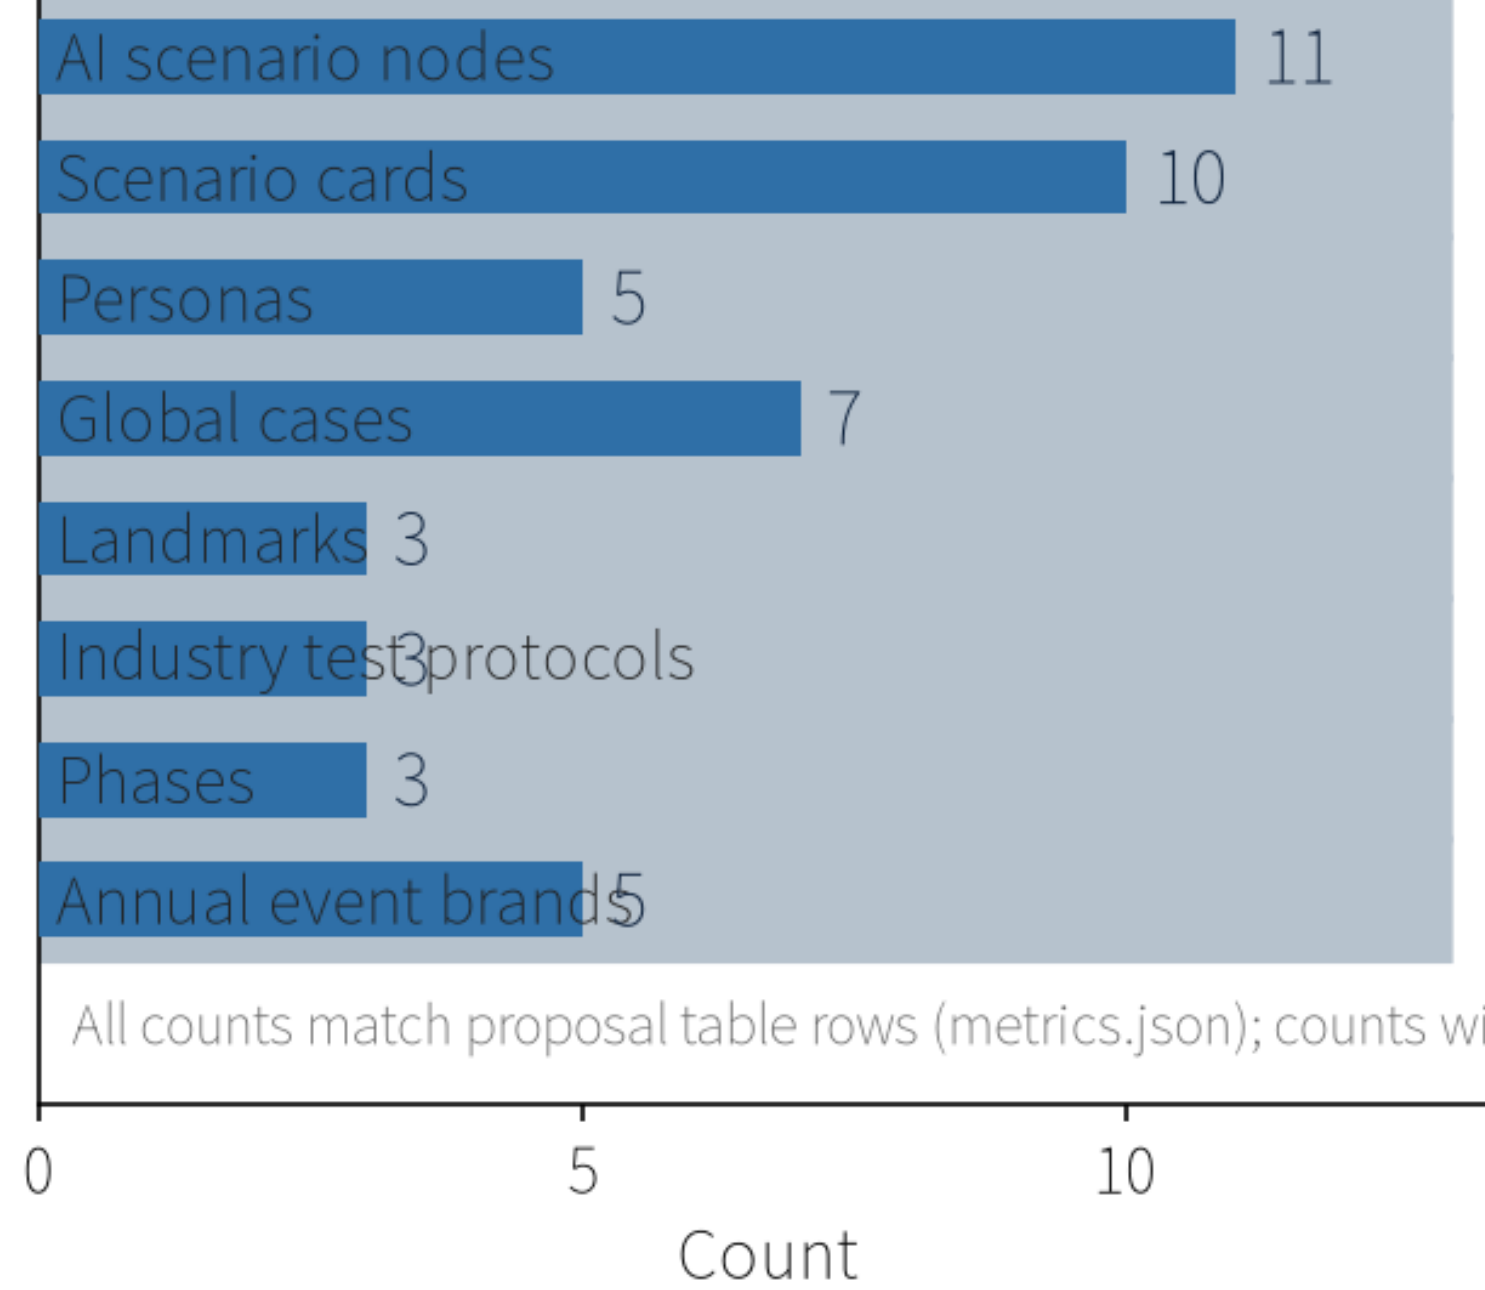

Key-Metrics Evidence and Three-Districts/Two-Wings Cooperation Loops (concept caliber)

Key Metrics Evidence Chart (concept caliber • provisional)

PROVISIONAL
Provisional concept boundary • Not an official redline • Recompute after official data release

i. Area & Ratio Indicators (separate axis) Count Indicators (separate axis; ratios and counts never share an axis)

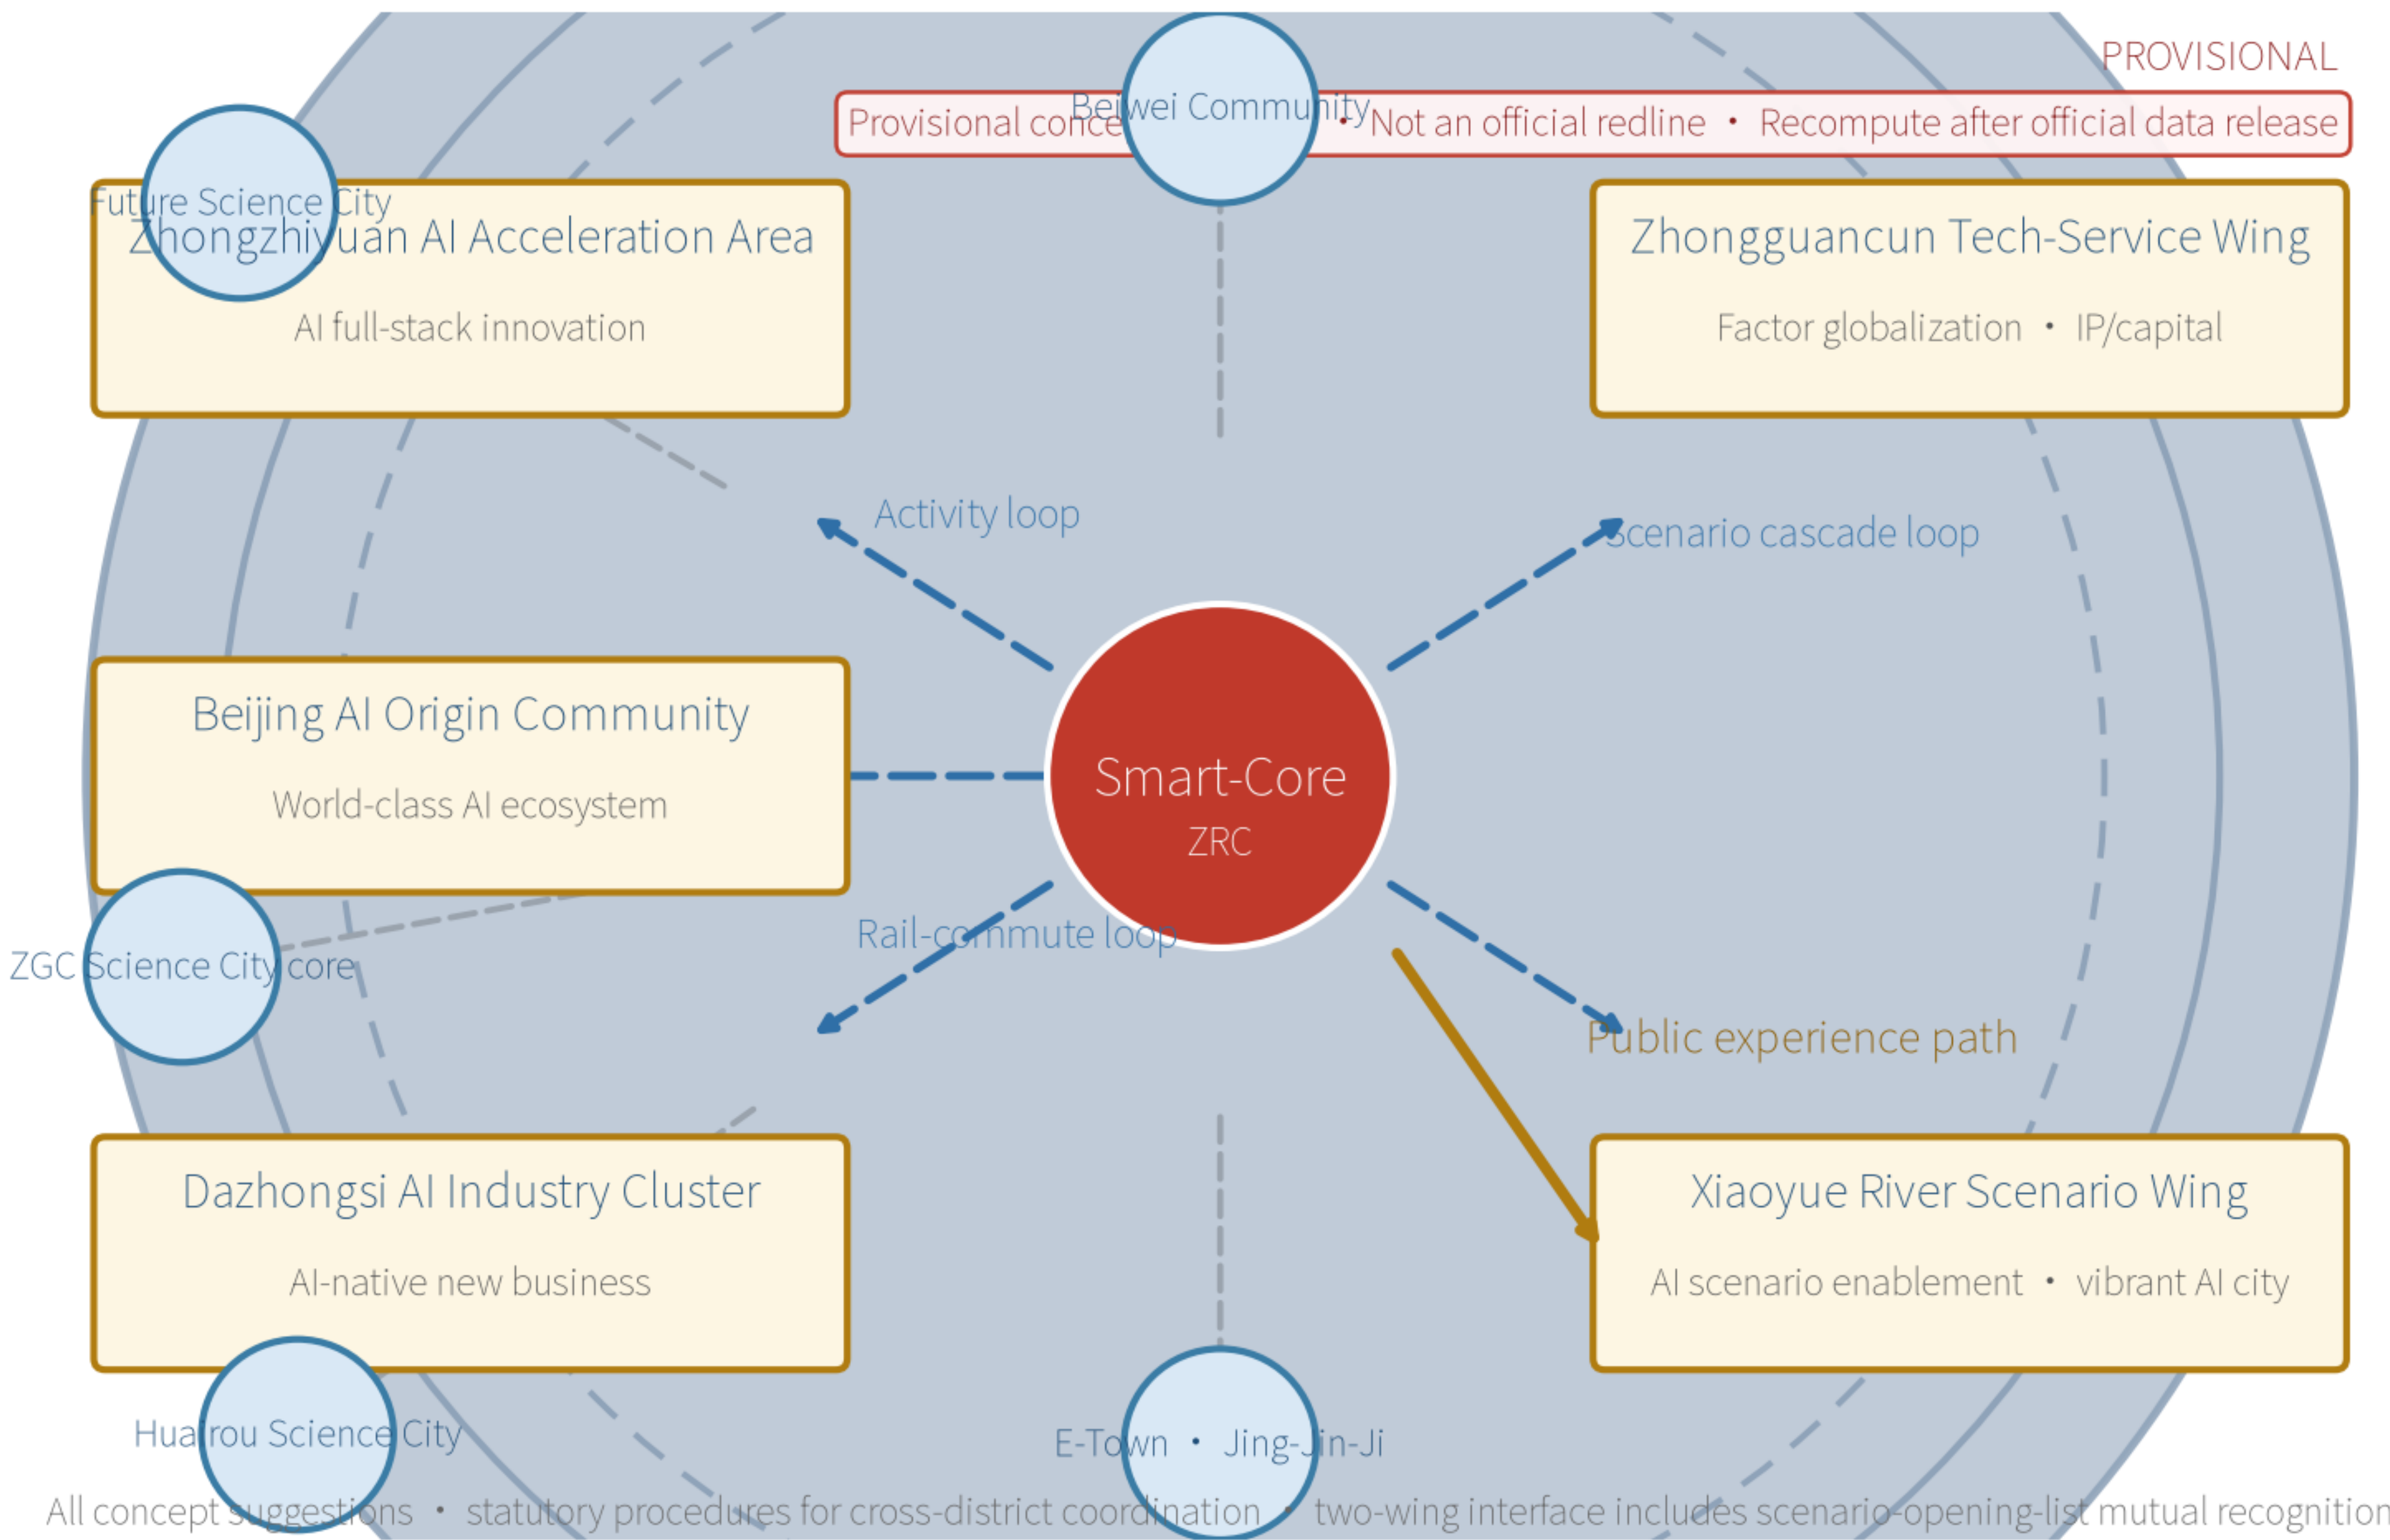

All counts match proposal table rows (metrics.json); counts without visible text evidence are not listed

Confidence: site_area_sqm=medium / ratios=low / counts=high (geometry-recomputable)

Recompute trigger: uniform recalculation after official geometry/network/ridership release (provisional)

Indicators: concept caliber; recompute after official data

Zhichun Road Smart-Core: Three Districts, Two Wings Loops & Regional Nodes (concept)

Loops: concept suggestions; statutory procedures required

Slow-Traffic Blue-Green Network and Land-Use Structure (concept)
