

RAIL • JZ — Transit-City Integration Coordination System (Concept)

Concept Booklet - provisional boundary - recalculate after official data

(concept only, not a statutory drawing)

Overall Design Overview (three-tier scope & three nodes, provisional)

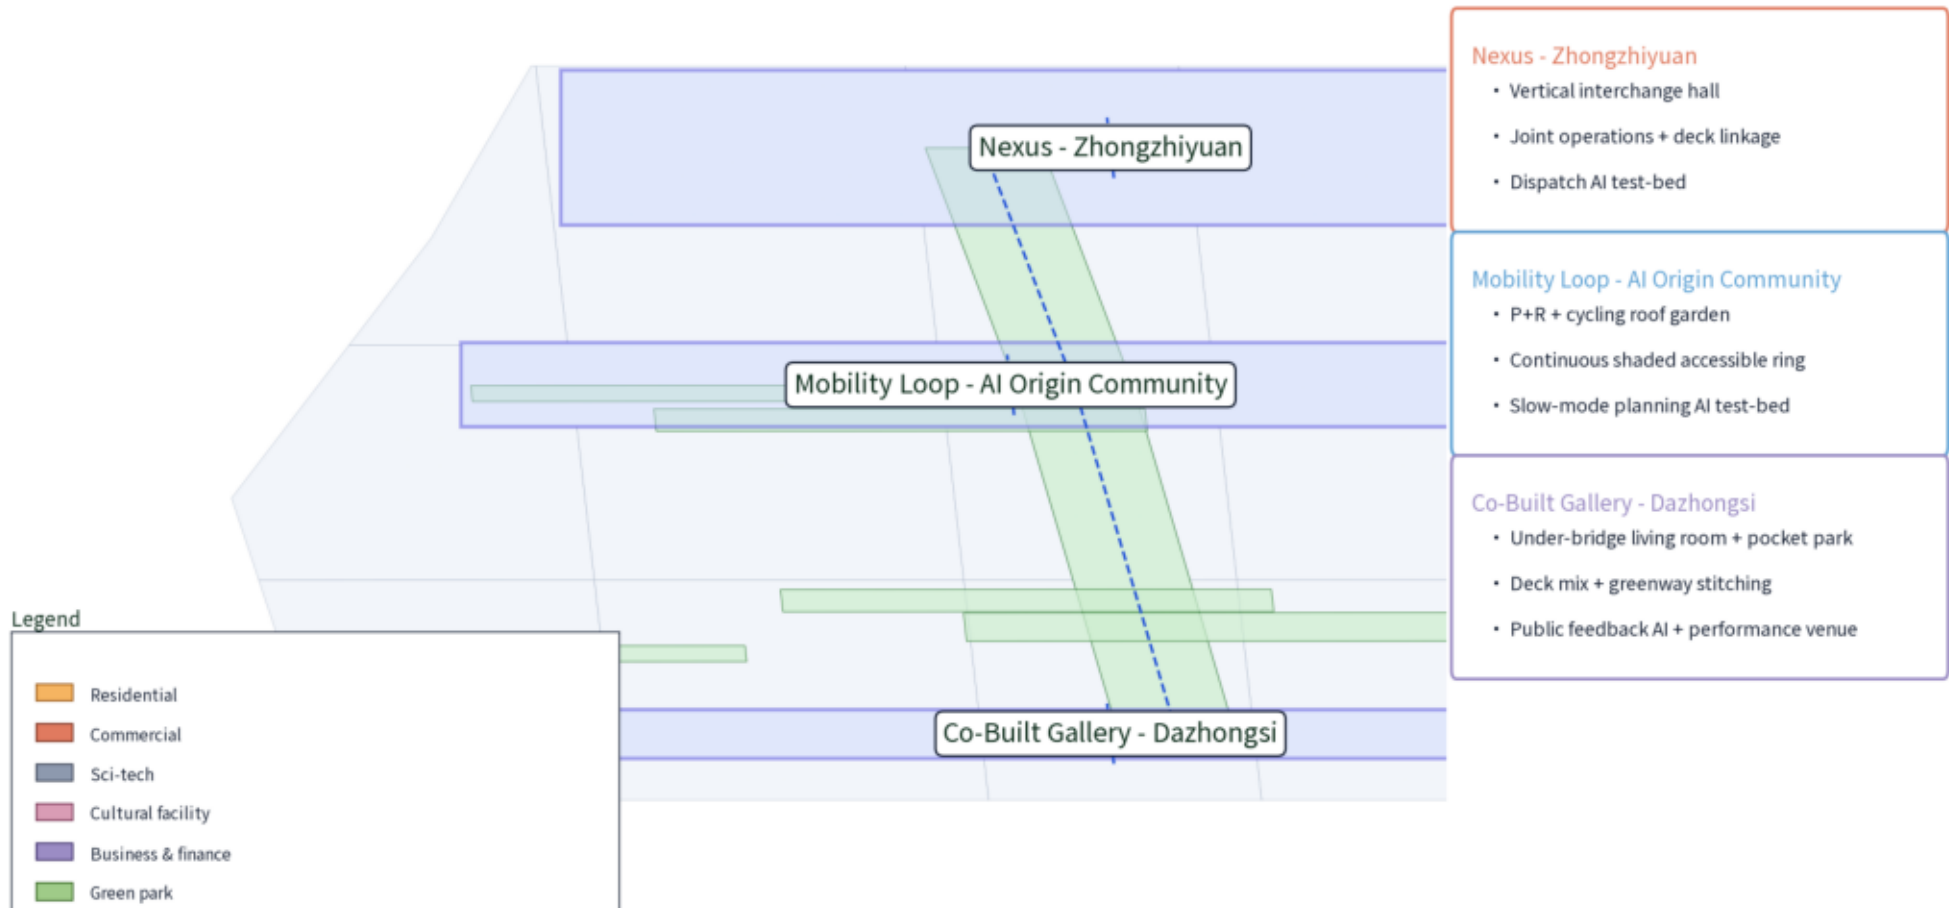

Provisional boundary only; node placement and areas are concept indications. Recalculate after official data release.

Three-Node Index & Site-Level Design Tasks (plan / section / user journey, concept)

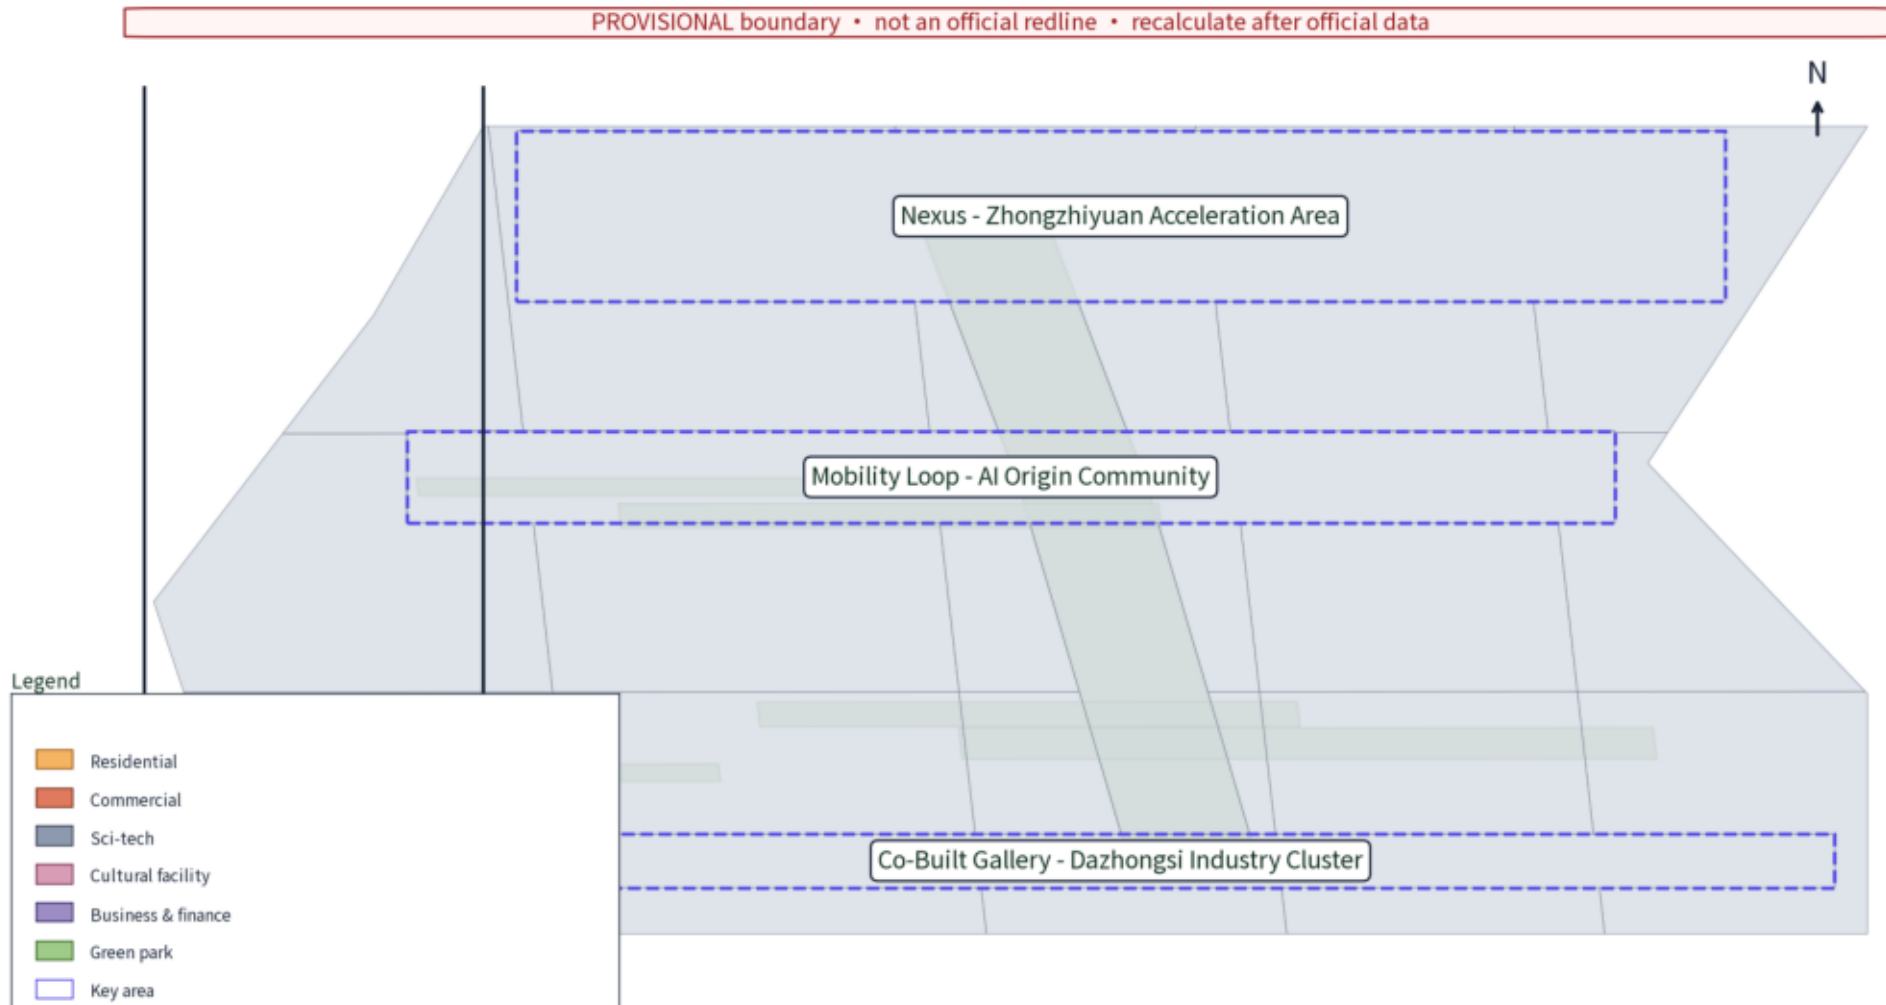

PROVISIONAL boundary • not an official redline • recalculate after official data

Node design task cards

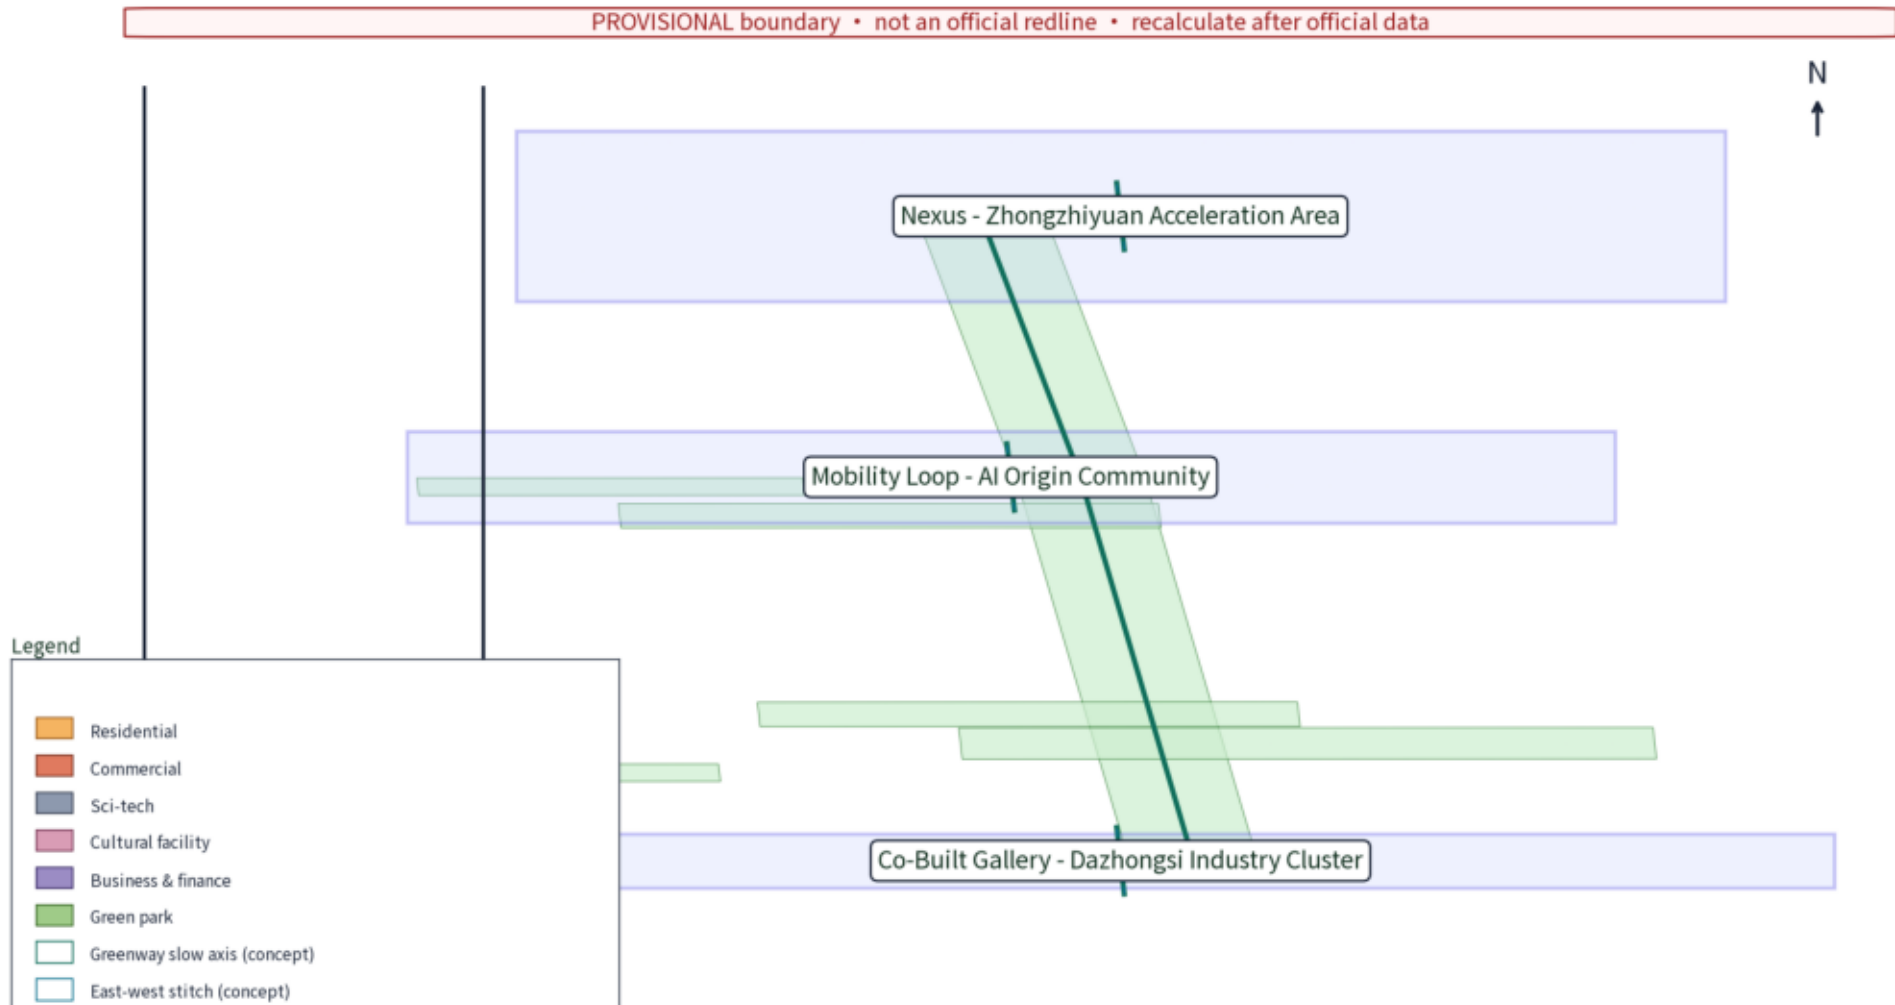

Site-level design tasks (concept): plan / section / user journey. Final siting waits for official boundaries.

Concept land-use structure (six categories & three nodes, provisional)

Land-use categories reference national classification; shares sum to 100% under single recalc calibre; full recalc after official data release.

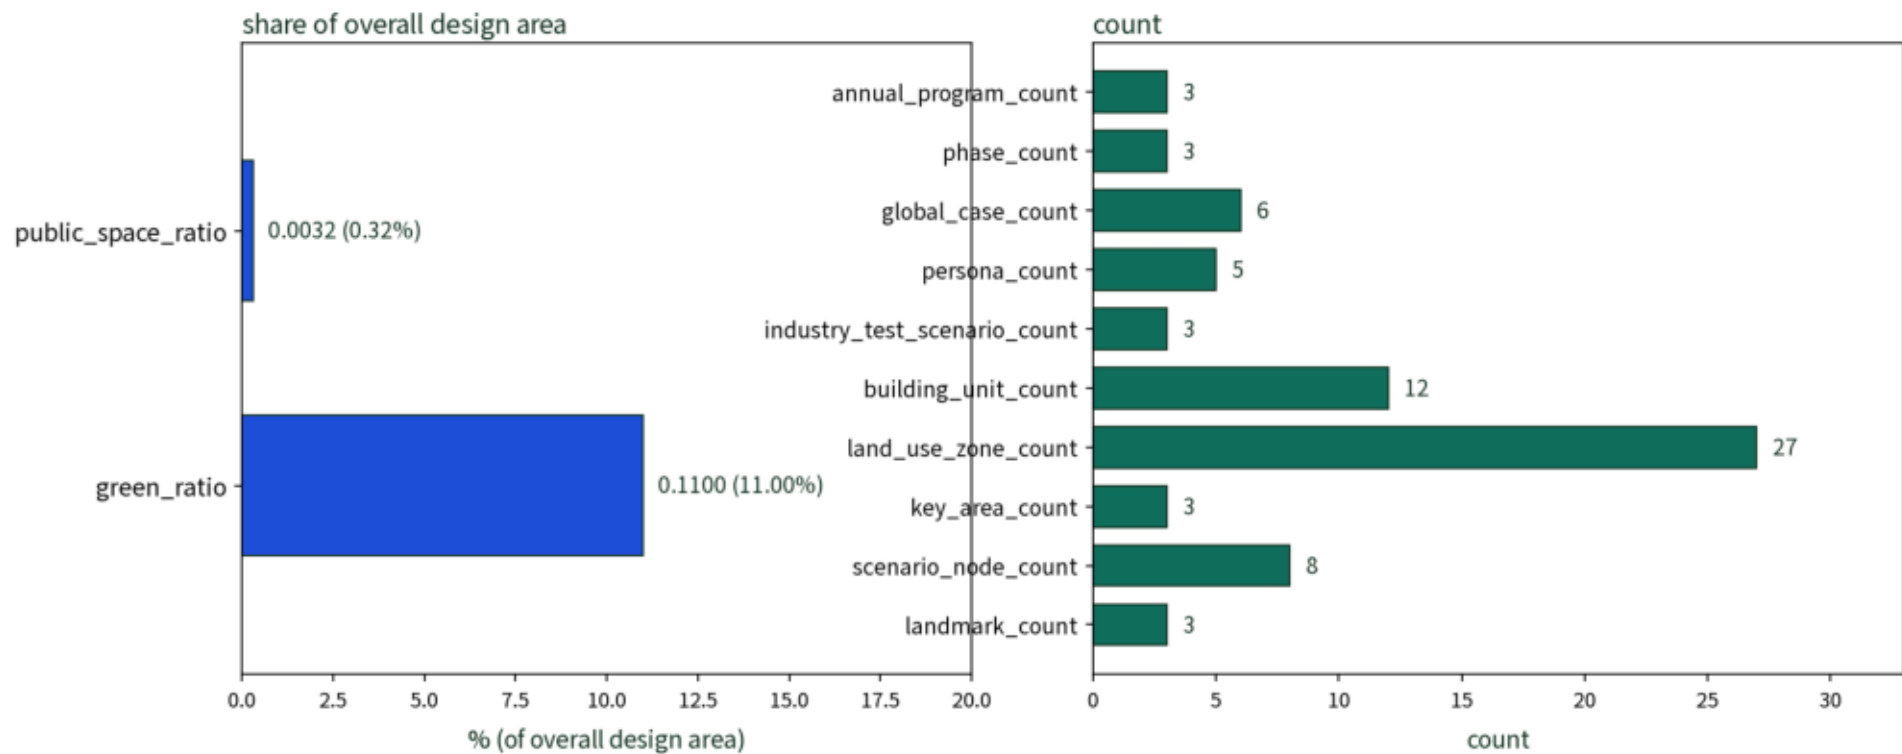

Mobility & blue-green analysis (greenway spine, slow axis & three nodes, concept)

Concept slow network: greenway as axis stitching the three nodes; time-shared street sections; not engineering, not measurable.

Core metric evidence (ratio & count on separate axes, provisional)

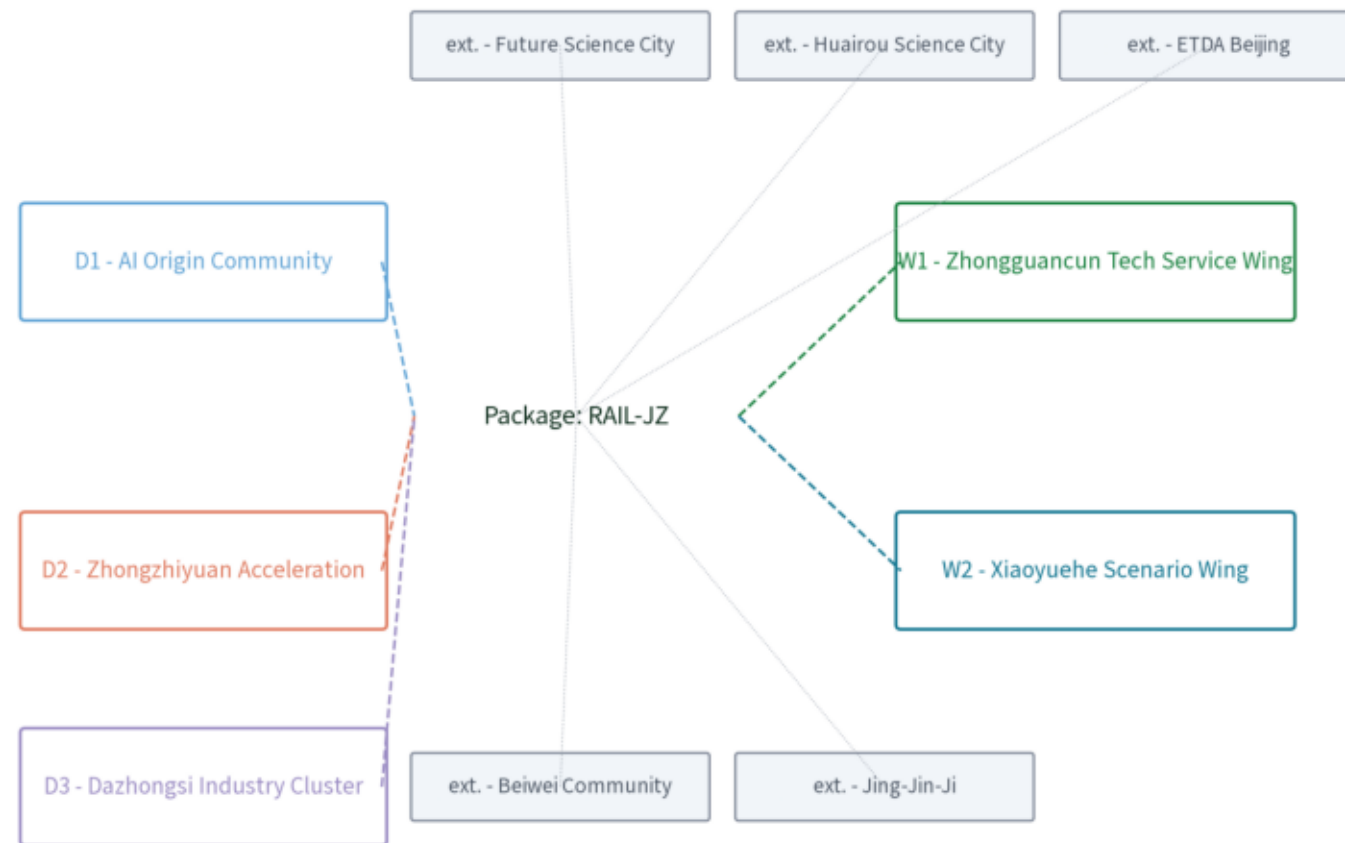

PROVISIONAL boundary • not an official redline • recalculate after official data

Ratios and counts on separate axes; provisional values are concept checks only. Recalculate per declared formula after official data release. Source: metrics.json + package GeoJSON; confidence low; recalc trigger: official geometry / official data release.

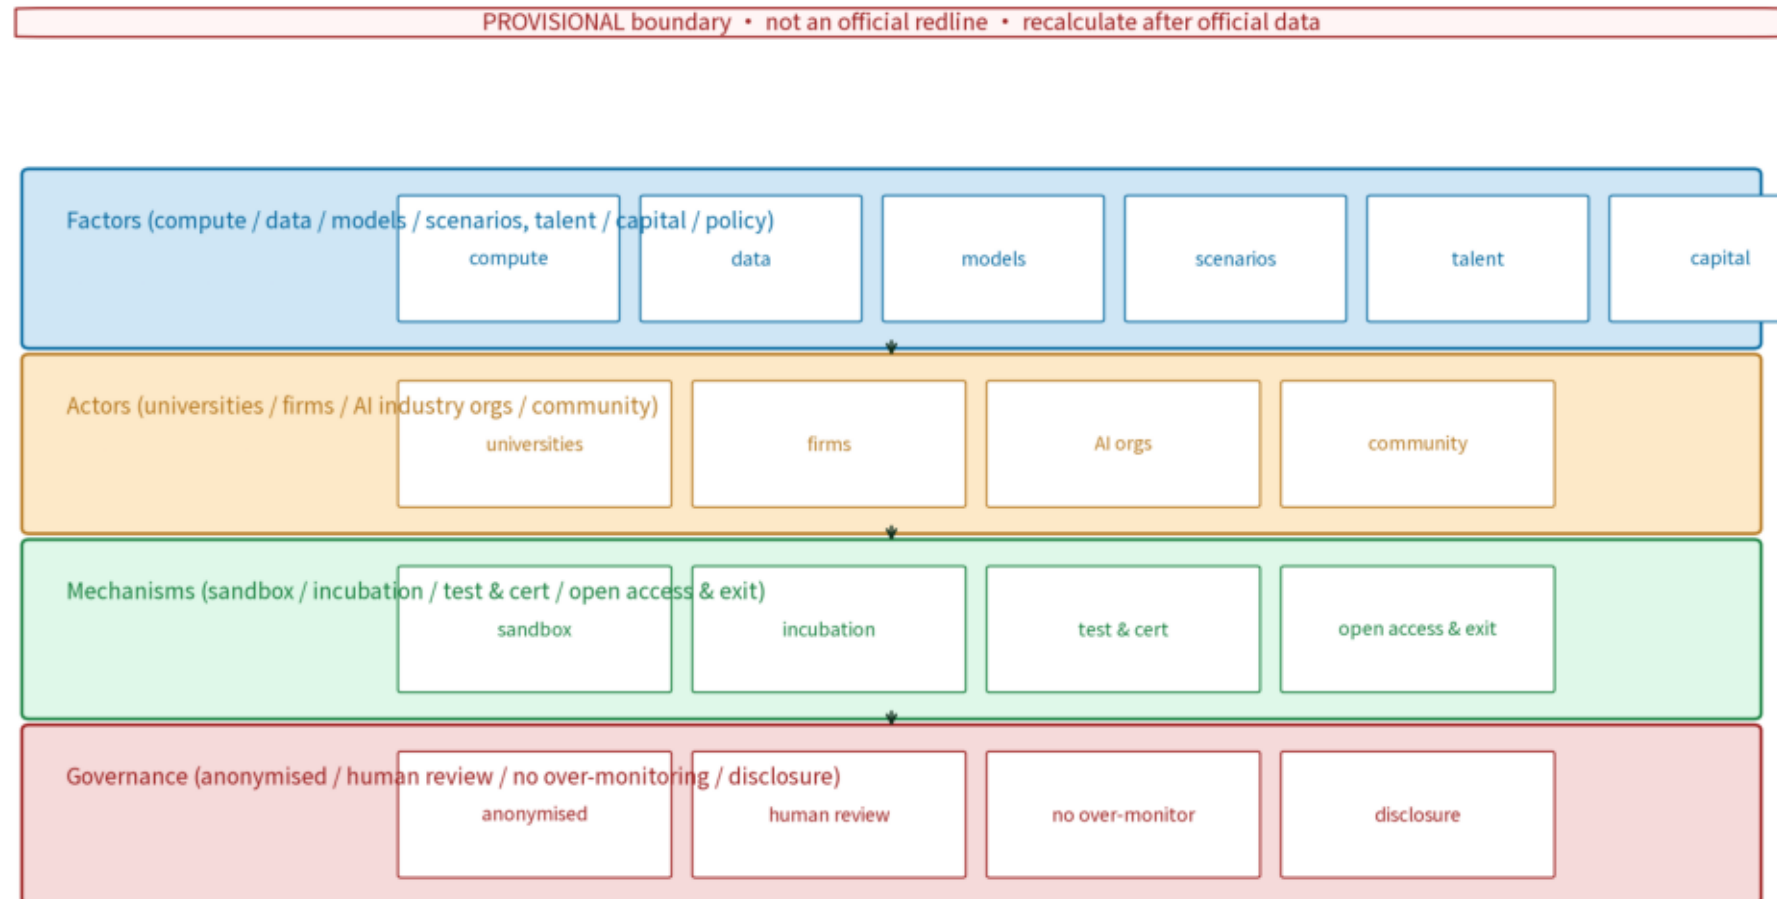

Regional innovation linkage (three-district two-wing + external network, concept)

PROVISIONAL boundary • not an official redline • recalculate after official data

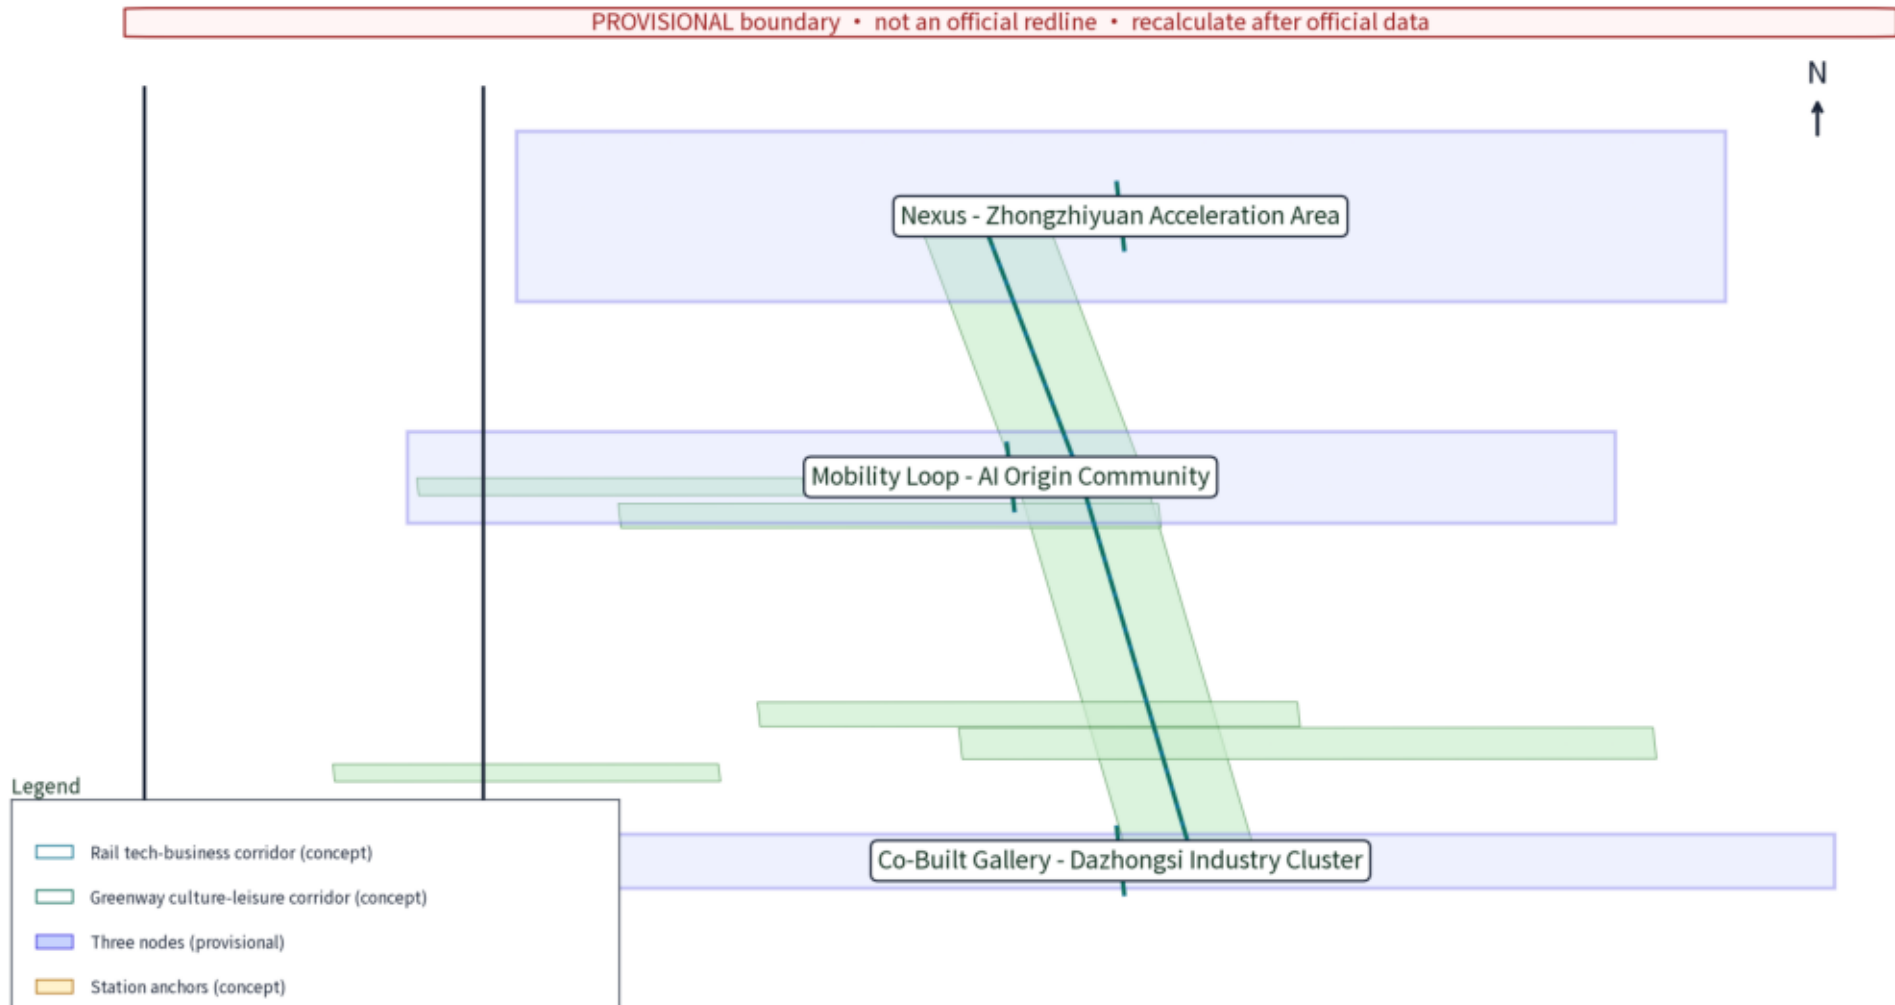

Three-district two-wing (taskbook) External regional cooperation network
Three-district two-wing per the taskbook; external regional cooperation network is a separately named concept reading, not a substitute for the taskbook scope.

AI innovation ecosystem map (factors - actors - mechanisms - governance, concept)

AI governance in three lines: anonymised aggregation only / key decisions human-reviewed / no over-monitoring. AI does not replace statutory transport or operational duties.

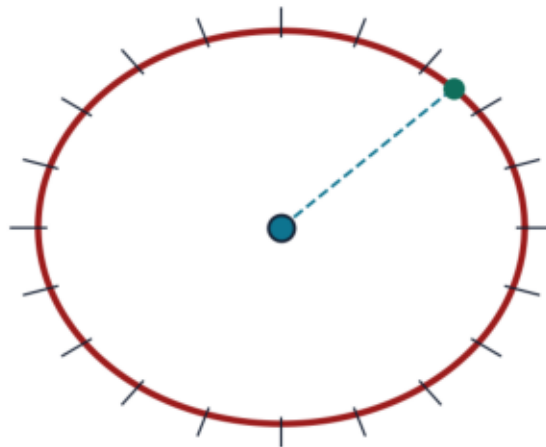

Overall spatial structure (dual corridor & three nodes, provisional)

Dual corridors in parallel: rail axis carries commuting and business flows; greenway carries leisure and encounter flows; inns and AI test-beds sit at the dual-flow junctions.

Brand identity direction (concept logo & visual system)

PROVISIONAL boundary • not an official redline • recalculate after official data

RAIL.JZ

Fusion Ring

Ring + sleeper rhythm + data node

Primary palette

Rail brick red

Zhongguancun tech blue

AI pulse teal

Typography: geometric sans, balanced zh/en spacing

Application: dark waymark field, white type with ring motif

No official trademark search completed at concept stage; RAIL.JZ and the three node names/marks are internal working codenames only, not for external registration or commercial use.
