

- East-west stitching links (concept)
- ★ Three nodes (concept locations)

Key areas approx 368.4 ha
(as minimum / supporting / supplementary minor), not verified percentages, classification design: barrier-free age-friendly system land/sea use classification guide; recompute when official data is published.

Core Metric Evidence (Machine-Recomputable)

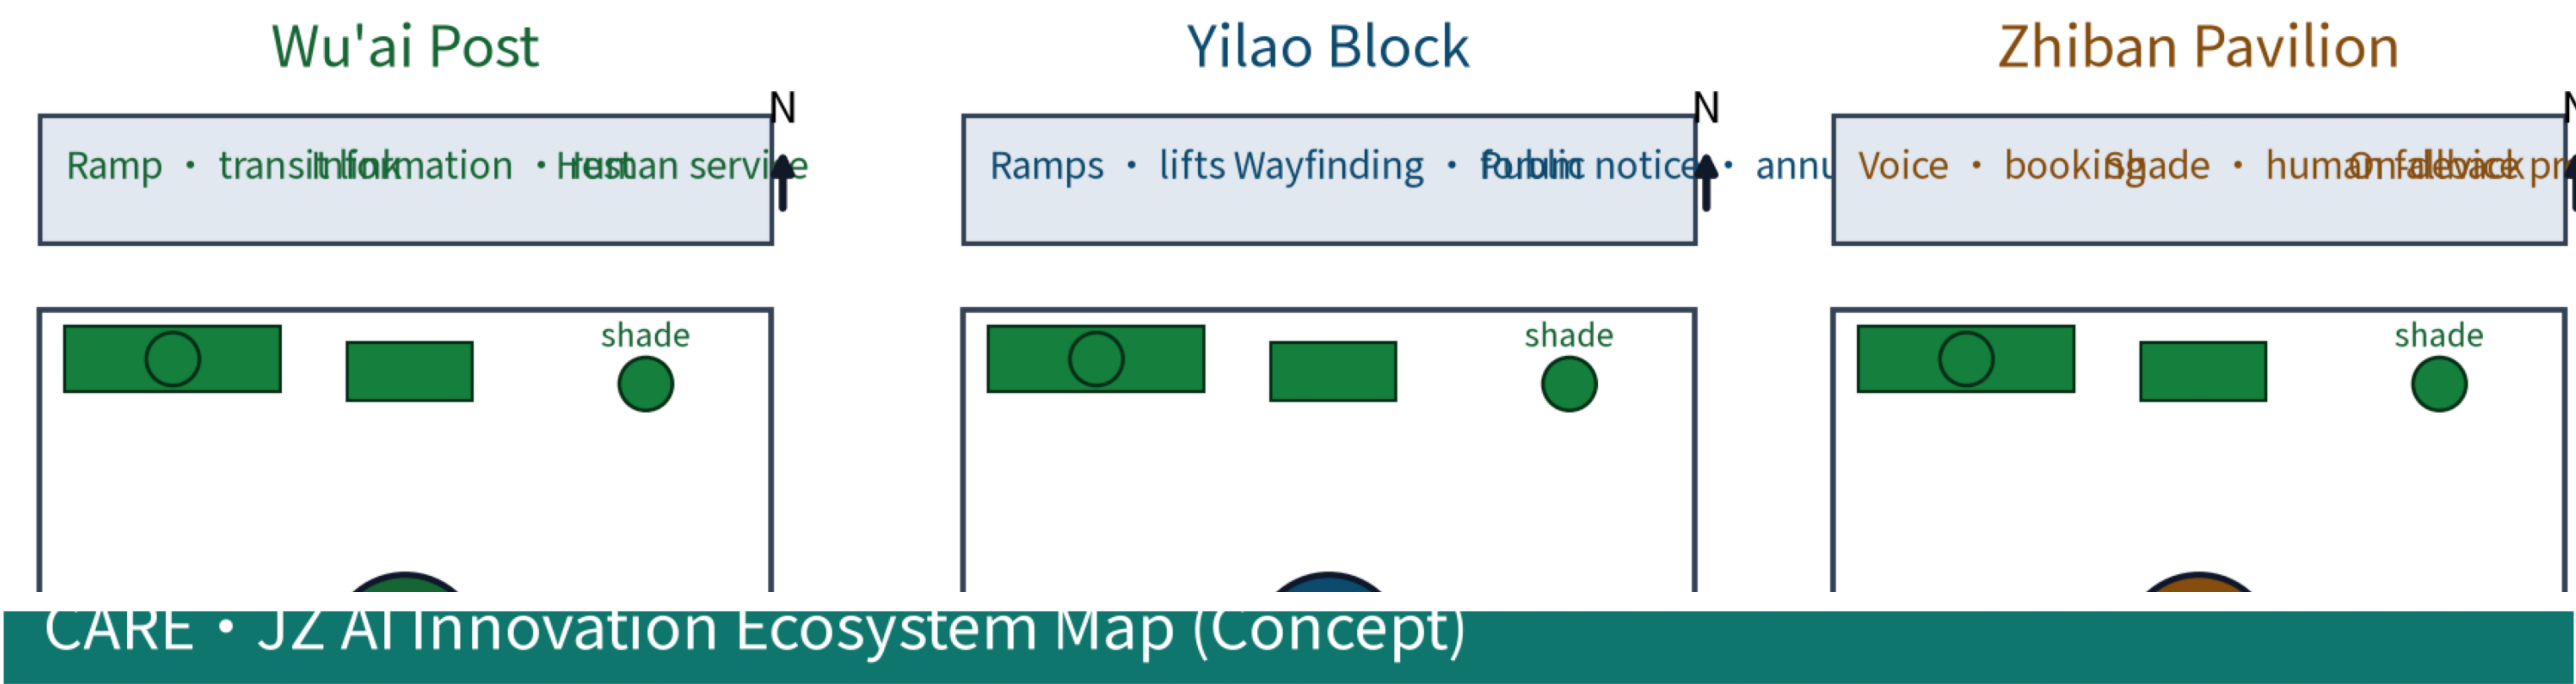

Indaries on this figure are provisional concept geometry: design intent and spatial relations only; not a redline or area basis; recompute when official geometry is publ

This board is a conceptual research expression: it is not an approval basis, redline, area basis or engineering conclusion.

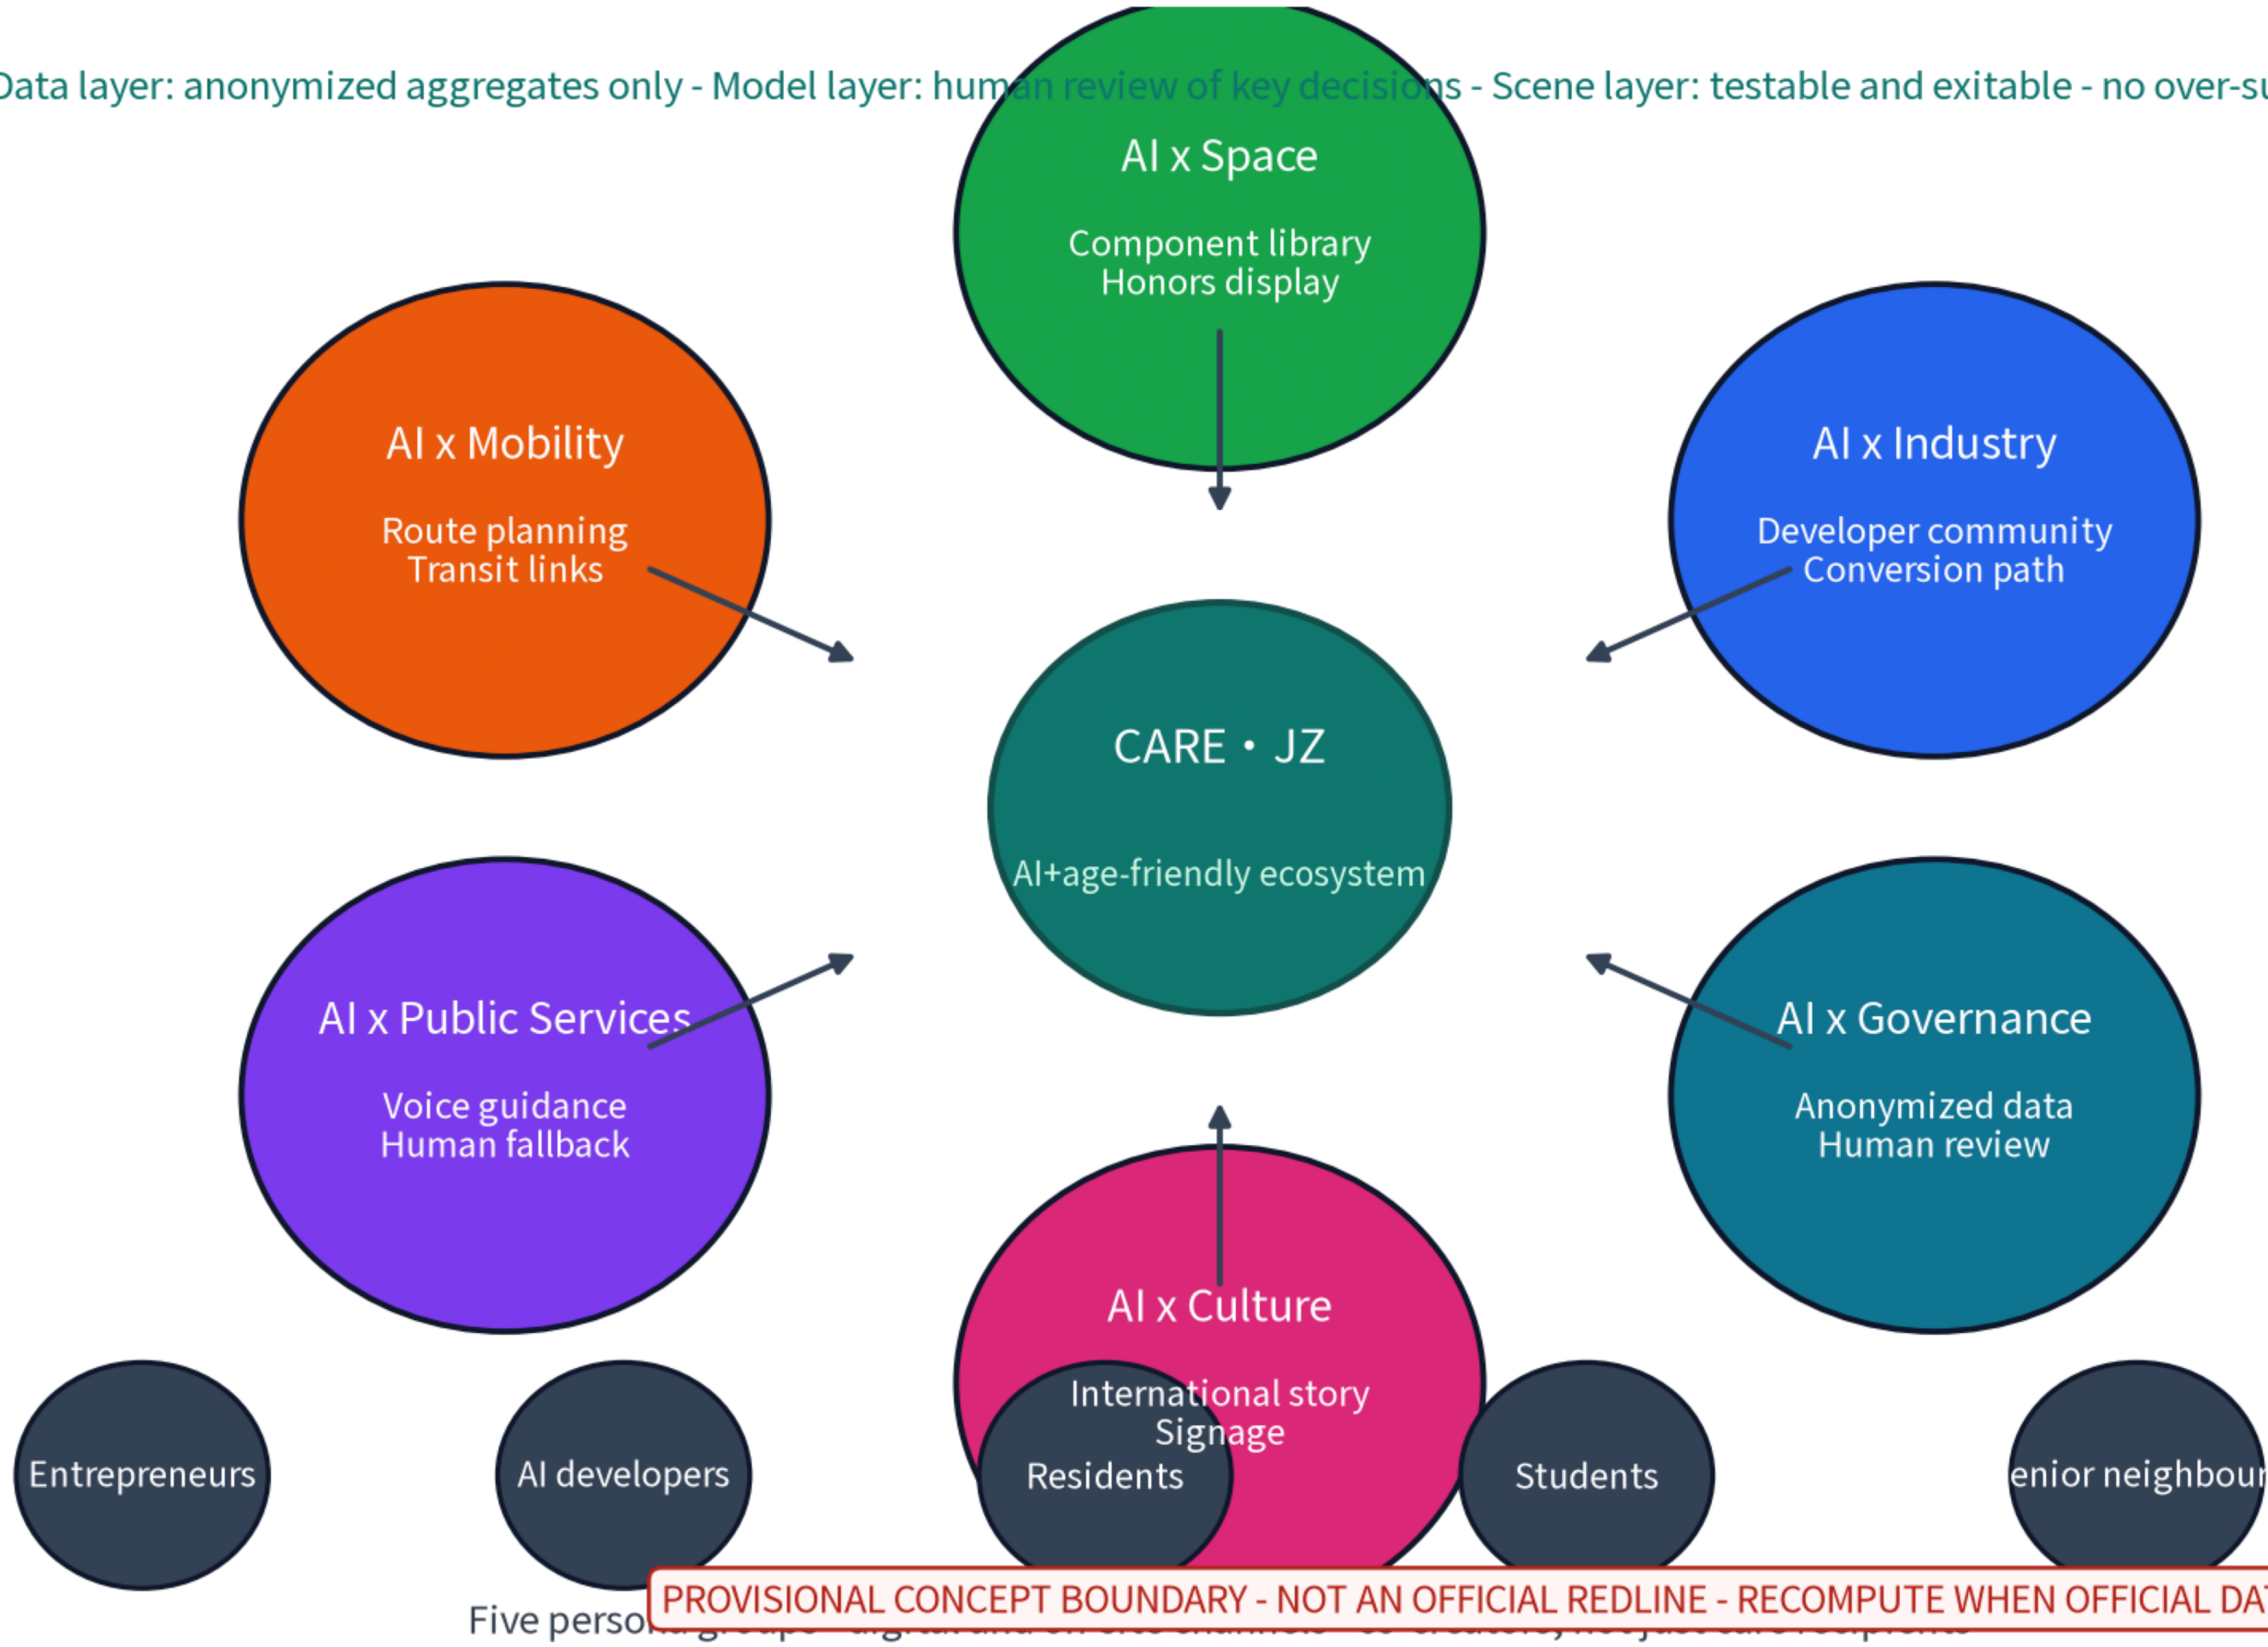

Retain-first renewal; no FAR, building height, demolition or investment figures are preset.

AI scenarios process anonymized aggregates only, with human review of key decisions and no over-surveillance.

Public feedback channels, annual publicity and annual evaluation are conceptual operating mechanisms.

Data layer: anonymized aggregates only - Model layer: human review of key decisions - Scene layer: testable and exitable - no over-surveillance

Wu'ai Post: barrier-free slow traffic and transit service node (ramp, inquiry, rest, human service).

Yilao Block: age-friendly community renewal demonstration unit (ramps, lift-feasibility review, wayfinding upgrades).

Zhiban Pavilion: AI-assisted age-friendly public information pavilion (voice interaction, booking, on-device processing).

The three nodes are linked by a continuous accessible slow-traffic spine; all are concept locations and require professional review before implementation.

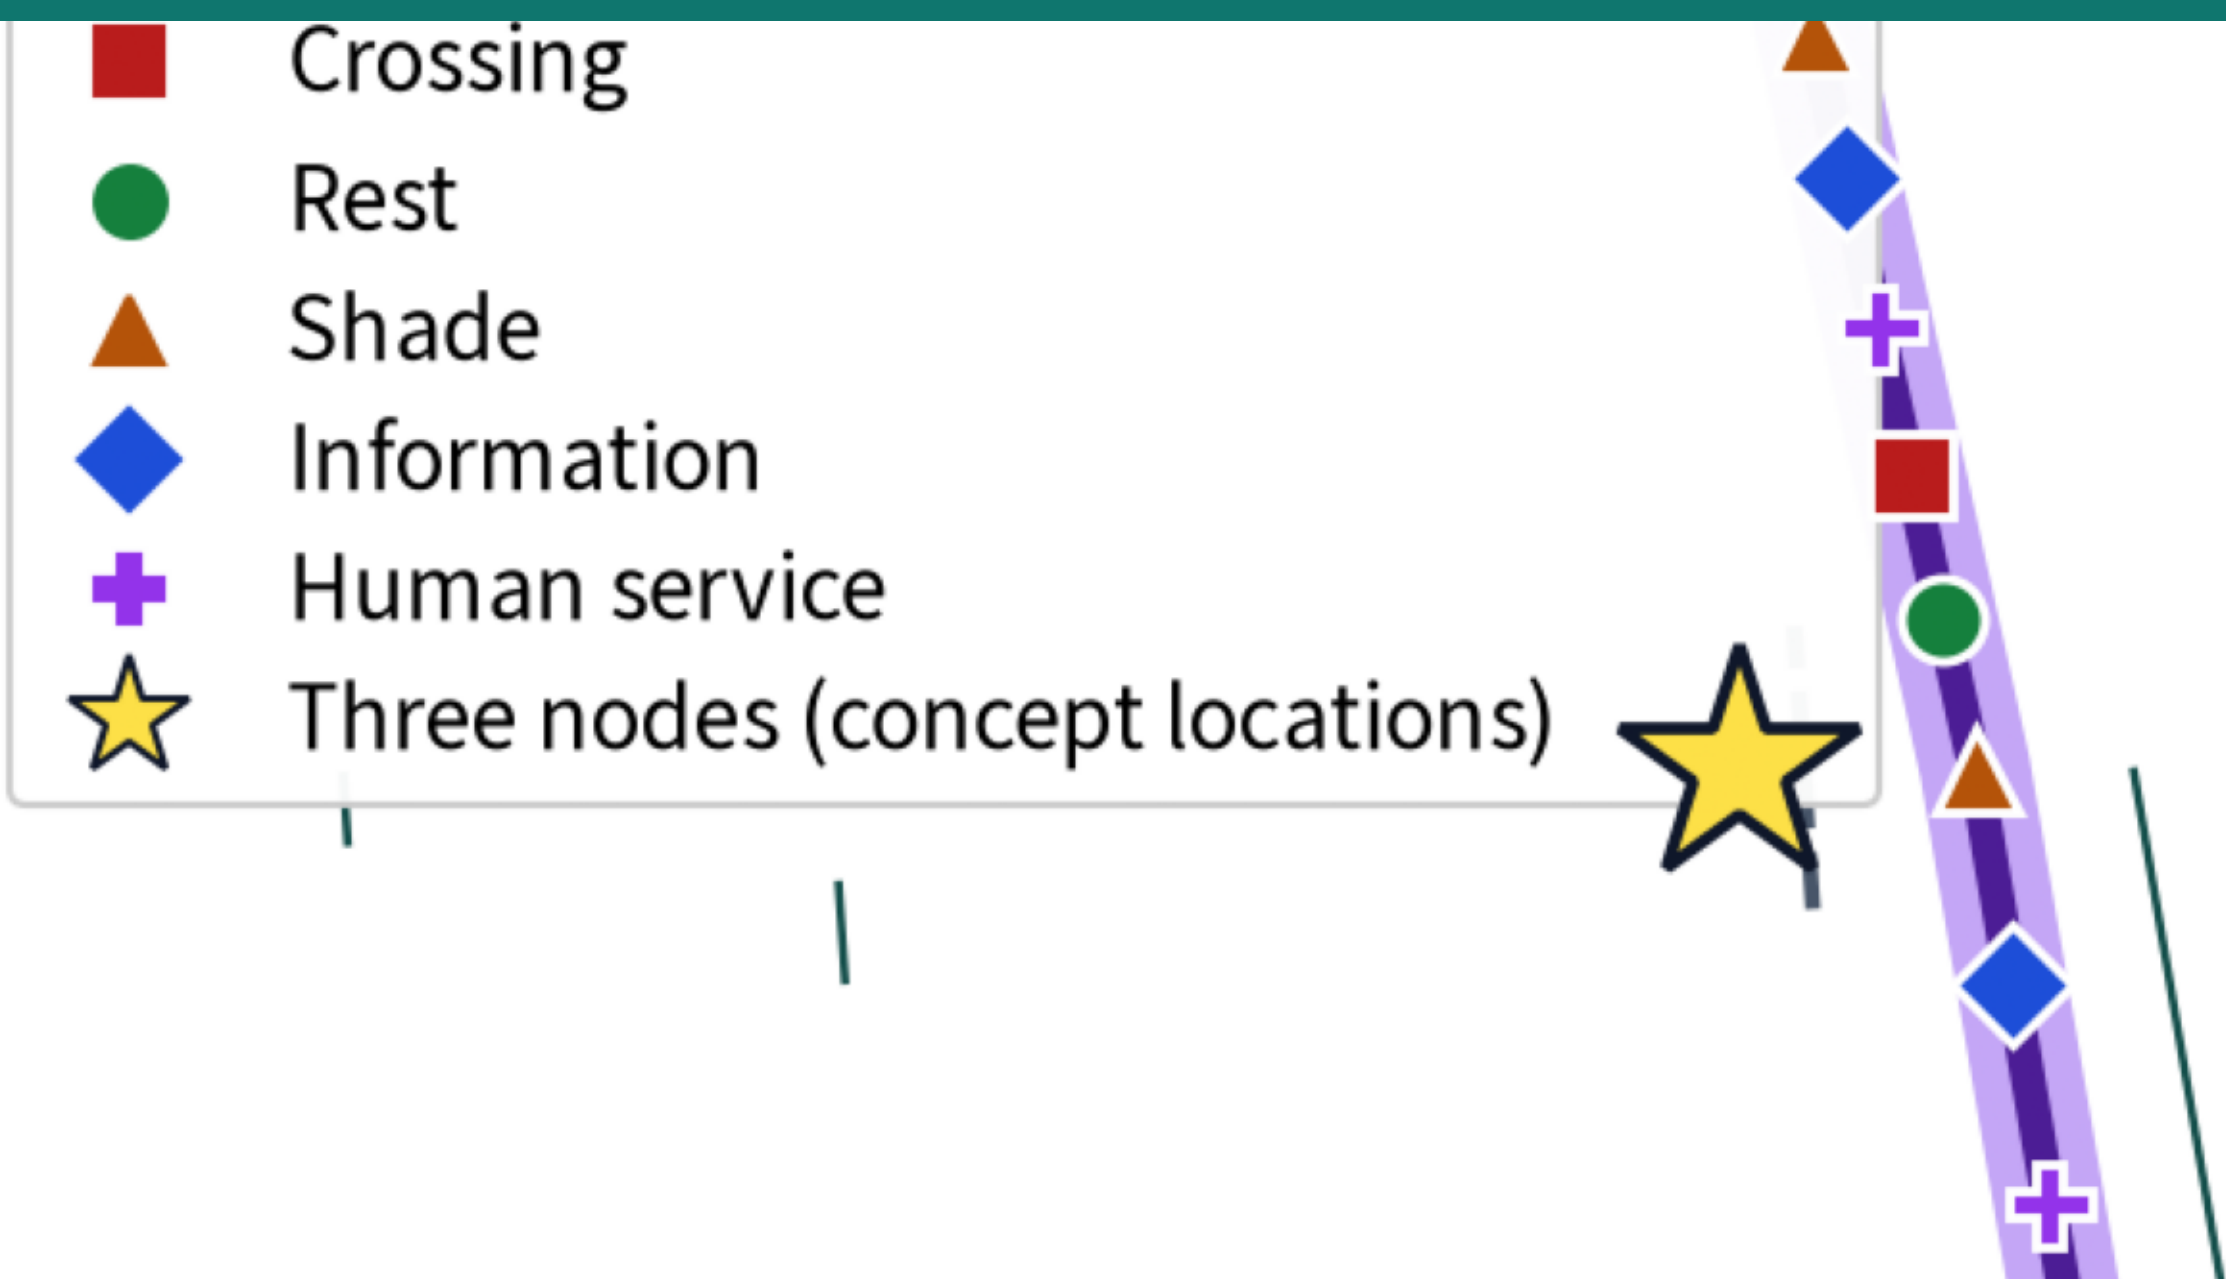

Five persona groups: entrepreneurs, AI developers, residents, students and senior neighbours (co-creators).

10 scenario cards plus 3 industry test scenarios (concept protocols: users/data/space/model/operator/fallback/metrics/exit).

International communication copy, developer community, open-scene, honors display and component library are concept mechanisms.

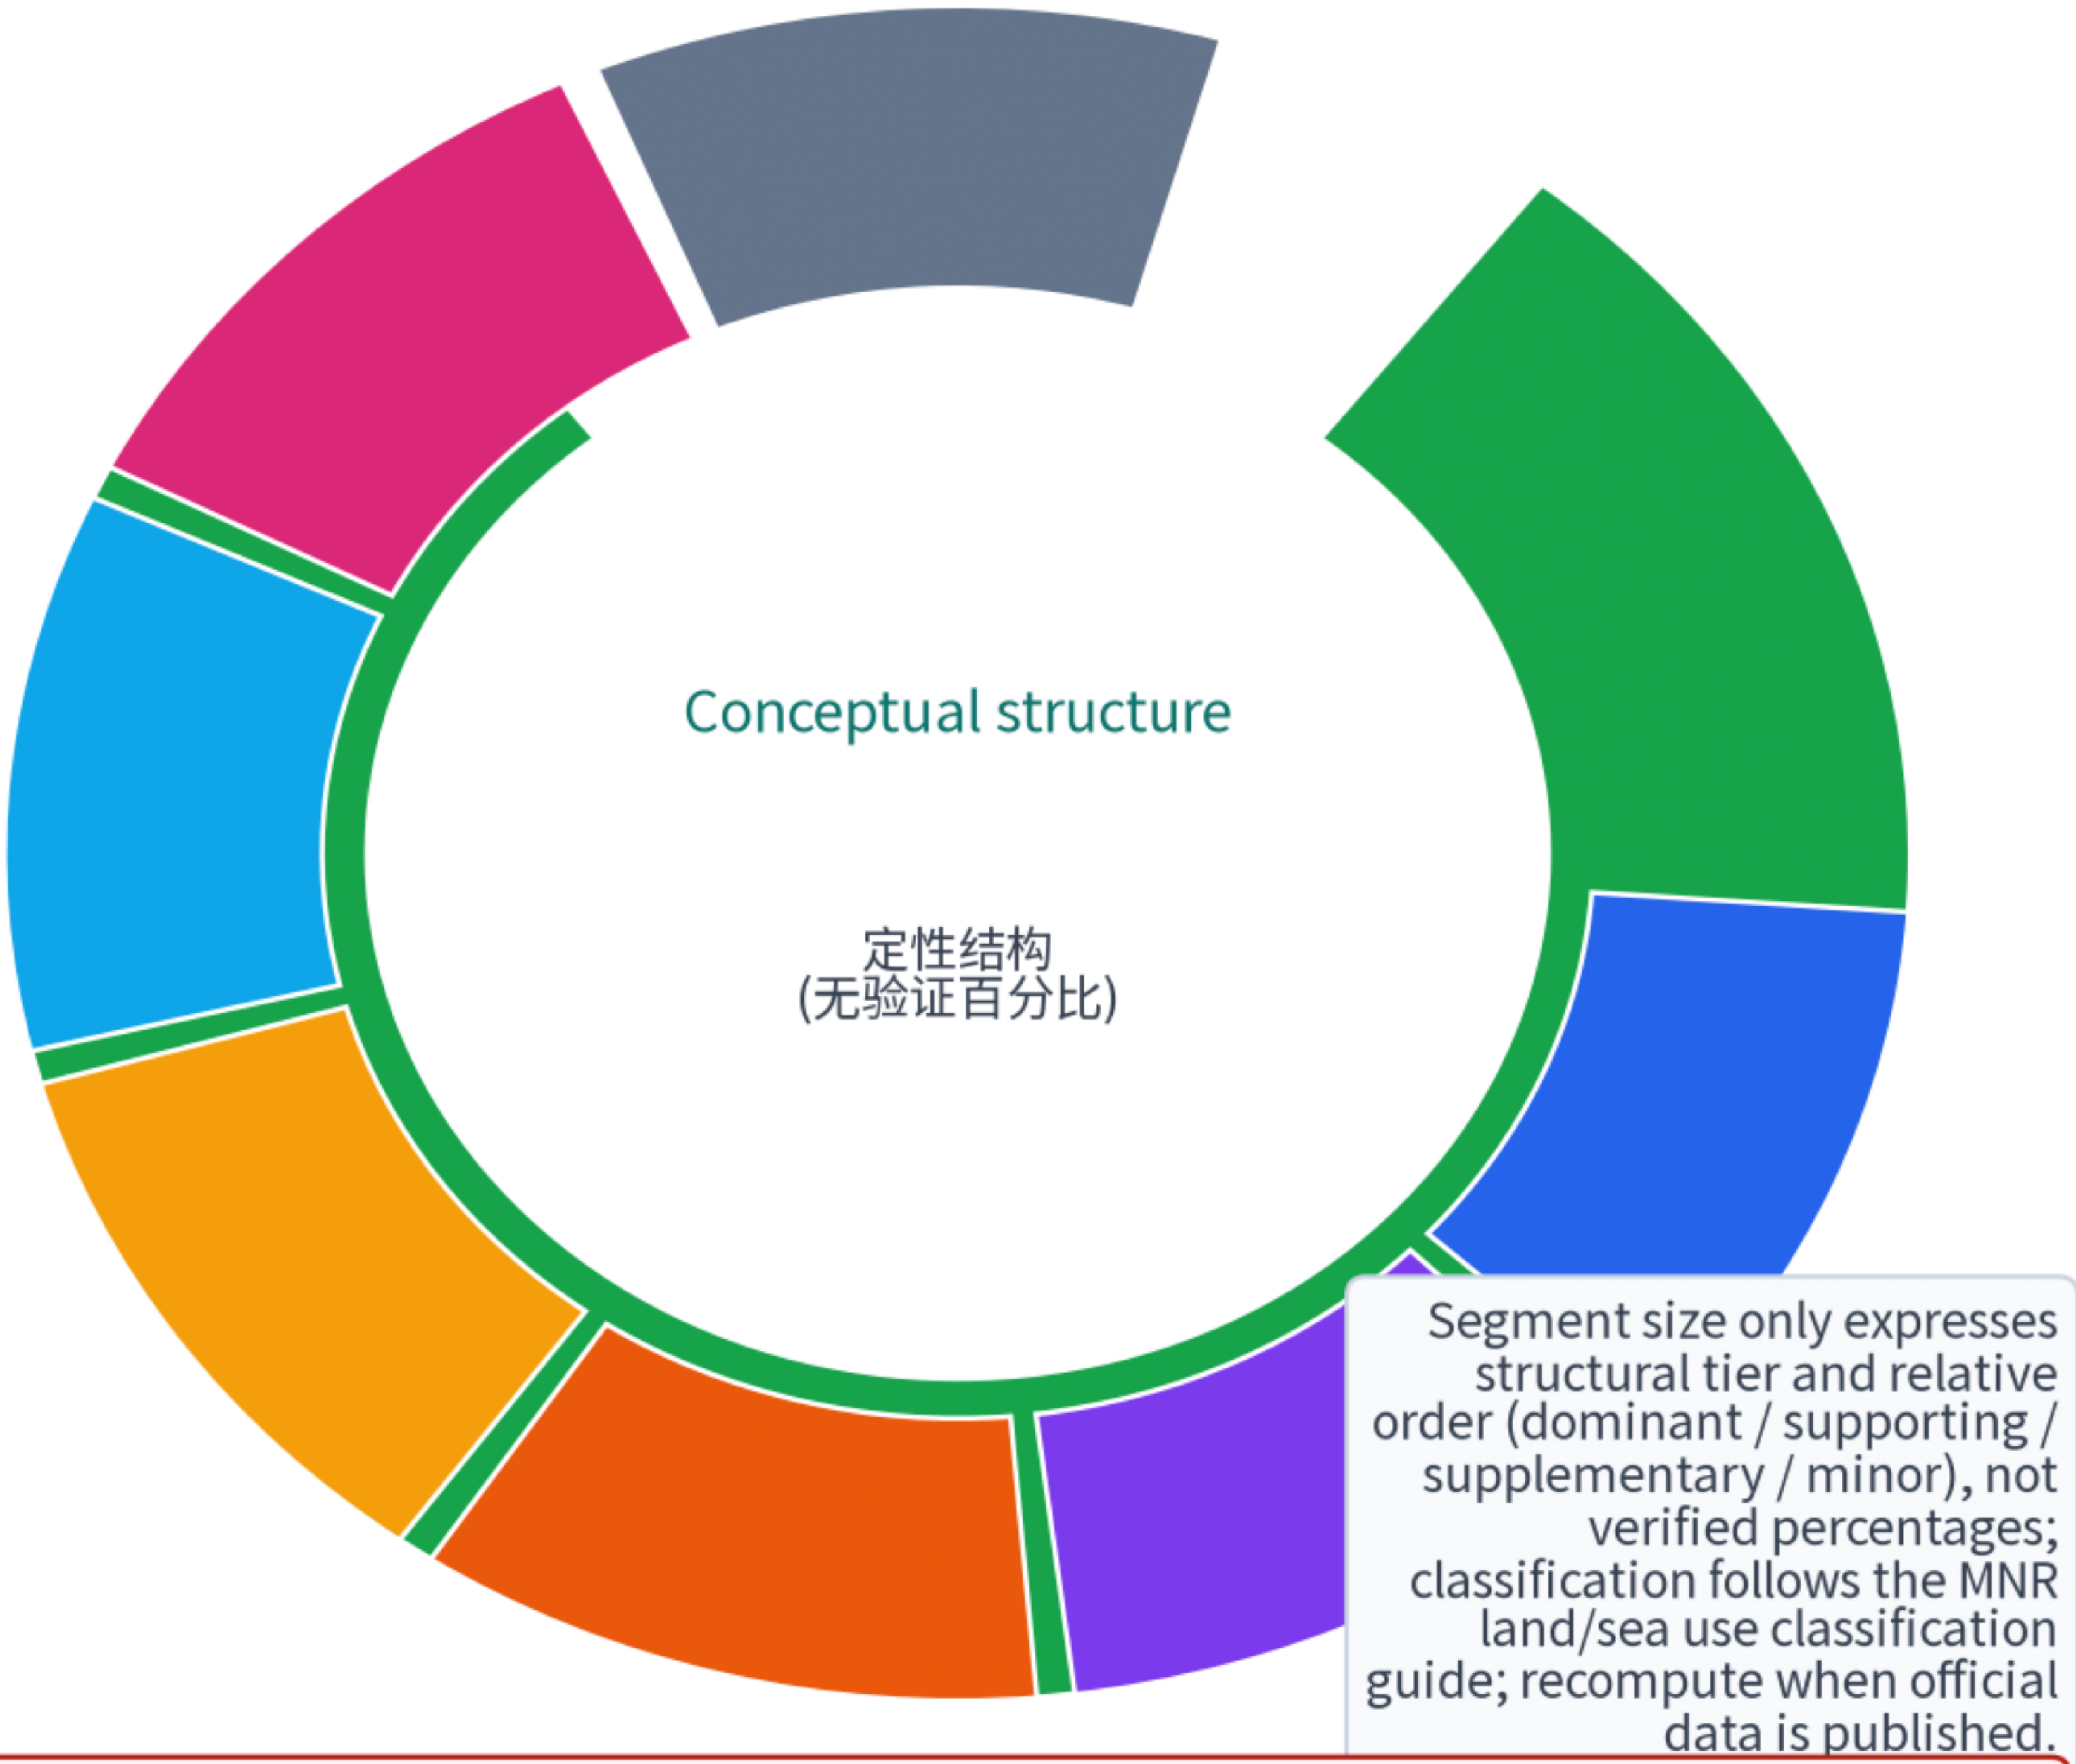

PROVISIONAL CONCEPT - NOT AN OFFICIAL REDLINE - RECOMPUTE WHEN OFFICIAL DATA IS PUBLISHED | 临时概念边界 · 非官方红线 · 官方数据发布后复算

All content in this package is a conceptual suggestion; see proposal.md, metrics.json, geometry/, sources.json and the matrices.

- Continuous accessible spine linking nodes
- Step-free rail station link routes
- Age-friendly crossings (curb ramps + signals)
- Rest seats and shade network
- Multilingual / voice wayfinding and signs
- Human service fallback (volunteer duty)

Land-Use Structure (Concept-Caliber Indication)

PROVISIONAL CONCEPT BOUNDARY - NOT AN OFFICIAL REDLINE - RECOMPUTE WHEN OFFICIAL DATA IS PUBLISHED

Conceptual land-use structure: no verified percentages are claimed.

Phasing: near 1-3 years | mid 3-5 years | long 5-10 years.

Green ratio and public-space ratio are geometry-derived (low confidence, reduced display precision); recompute when official data is published.
