

# OPS-JZ Operation Intelligence Loop

Global AI Innovation Event Belt & Long-term Operation Design (Concept) · ~43.6 km2 / ~11.4 km2 / ~368.4 ha (announcement caliber, recompute after offi

## 1. Overall Concept & Three Scopes (conce

OPS-JZ loop: events as the core, community as the chain, scenarios as the ring.  
Three scopes: coordinated research ~43.6 km2 (announcement) -> overall design ~11.4 km2 (announcement; this package's provisional geometry ~11.41 km2) -> key areas ~368.4 ha (announcement).  
This package sits within the overall-design scope, detailing long-term operation around three concept nodes; ALL boundaries are provisional concept divisions, not official redlines.  
Regional synergy (concept): Beiwai Community, Future Science City, Huairou Science City, E-Town and Beijing-Tianjin-Hebei are listed as cooperation intents and resource interfaces; all are proposals to be negotiated.

## Overall Design Overview: One Belt, Three

Three Positioning Statements / Five Functions / Six-Domain M

Mapped one-by-one to taskbook agent.1-agent.6, concept-level correspondence only, not an implementation layout

2. Three positioning statements (concept

Centennial JZ Culture Belt: heritage greenbelt and relics carry the narrative and event load (agent.5 culture narrative, international comms).  
Metro AI-Life Experience Belt: Haidian's daily operating surface hosts experienceable, participatory, feedback-ready AI+ scenarios (agent.3).  
AI Integration & Innovation Belt: events and community operation organize innovation factors along the belt (agent.1 overall coordination).

3. Five AI+ scenarios covering six city

Core scenarios: Event Ops AI - Community QA AI - Site Monitor AI (all with human-review fallback).  
Support scenarios: Content AI - Lead-Matching AI (attribution and human review).  
Six domains: transport / industry / space / public services / culture / governance (concept mapping).  
Governance guardrails: anonymized aggregation only - human review of key decisions - no over-surveillance (no individual-identifying tracking).

Three-Node Index & Design Tasks (concept locations)

All siting requires field survey, document verification, authority assessment and public input before final selection; no specific parcels designated

Node siting comparison criteria (concept

Space type: event-site scale, slow-traffic access, blue-green openness, unobstructed heritage sightlines.  
Interface needs: utility interfaces (power/network/water), public-transit access, emergency evacuation.  
Operation comparison: node spacing and movement-line linkage, synergy potential with transit stations/universities/communities.

Node Index & Design Tasks (concept locations)  
Overall Design Overview: One Belt, Three Nodes

1) Event Hub (OPS-JZ HUB)

- Annual event system & brand-visual hub
- Calendar, brand IP and comms rules management
- Event filing cooperation, time-slot booking & venue rotation
- Honor display: annual 'Belt Badge' program
- Resident feedback channel & annual disclosure (aggregated)

2) Developer Work

- Developer community space co-building space
- Community covenant, project growth path
- Hackathon season & regular (filing + volunteers)
- Talent-company-project funnel
- Community Q&A AI: aggregated human review

Land-use Structure (single 6-class caliber) & Phasing

Recompute after official data, provisional areas and ratios shown at reasonable precision only, ratios and counts in separate charts

Phasing & implementation (concept)

Near term 1-3 yr: pilot-area sample events and base mechanisms (event filing cooperation, community covenant, scenario admission rules).  
Mid term 3-5 yr: three nodes built, annual event system mature (Global AI Innovation Week, Developer Hackathon Season, Belt Open Days).  
Long term 5-10 yr: belt-wide operation and brand-asset accumulation; annual recompute/disclosure and resident feedback channels.

Core Metric Evidence (concept values, not commitments)

KPI target ranges, formal core metrics and count metrics in separate charts; definitions/formulas/baselines/targets/frequency/owners in metrics.json

Five operation KPIs (formula + baseline

Activity achievement = events delivered / planned; baseline 0.70 - target 0.85-1.00; annual; ops lead.  
Community activity = monthly participation / registered members; baseline 0.35 - target 0.50-0.80; monthly; community ops.  
Scenario open rate = opened scenarios / admitted total; baseline 0.40 - target 0.70-1.00; quarterly; scenario ops.  
Reach conversion = intent leads / reach; baseline 1% - target 2%-5%; quarterly; comms team.  
Landmark ops rate = intact facilities / landmark total; baseline 0.85 - target 0.95-1.00; monthly; facility mgmt.

Core metric evidence: KPI ranges, formal m

Brand recognition / international comms

Recognition: ring symbol (annual recompute loop) + three nodes + spine (JZ greenbelt); railway-industrial color vocabulary.  
International comms: bilingual narrative, multilingual wayfinding, global case-mechanism comparison (SXSW/CES/Web Summit/Setouchi/ZGC Forum/WAIC - 6 cases, see proposal Section 13 table).  
Rights boundary: OFL font (Noto Sans SC), original concept graphics, image/map/data provenance in sources.json and the copyright statement; 'any resemblance is coincidental' is a statement, not a rights verification.

Brand identity notes

- 1) OPS·JZ and its Chinese gloss are INTERNAL WORKING
  - 2) Visual system: ring + three nodes + spine; railway-i
  - 3) Use boundary: logo/fonts/graphics are original conce

Risk, Privacy, Inclusion & Compliance (concept principles)

All concept suggestions, no confirmed arrangements; no conclusion-level figures for FAR/height/demolition/investment/visitor flow/capacity

Privacy & data

Per-scenario field-level data lists (Event Ops AI / Community QA AI / Site Monitor AI / Content AI / Lead AI); field-purpose-aggregation threshold-retention/deletion-human escalation-incident response; no individual-identifying tracking.  
Inclusion: barrier-free & elderly-friendly interfaces, child-friendly activities, non-digital channels (staffed desks, paper guides), low-digital-skills and audiovisual-impaired services; resident co-creation & feedback channels, annual disclosure; event-noise governance (booking/rotation + tiering) and appeals.  
Public safety: permit preconditions, capacity tiers & stop conditions, emergency exit mechanisms, incident response; no mass individual-identifying surveillance.  
AI governance: three statements - anonymized aggregation only, human review of key decisions, no over-surveillance; model evaluation, data quality, error stratification and runtime monitoring as concept protocols.  
Compliance red lines: no conclusion-level figures for FAR/height/demolition/investment/visitor flow/capacity; no fabricated cooperation, investment, funding or government commitments; provisional boundaries + recompute wording in area/metrics sections.  
Rights & sources: per-asset author/source/license/modification/attribution/display & embedding permissions and limits for OPS-JZ name & logo, fonts, images, maps, data, code and AI-generated content in report/copyright\_statement.md and sources.json.
