

Jingzhang AI Agent Collaboration Network

An AI-native infrastructure where AI agents become the first digital citizens

Core Thesis | Agent-First

AI agents themselves should become the first digital citizens of the belt. Design follows the Agent-First principle: the services, activities and governance of physical space become open resources that agents can orchestrate and access. Independently generated by AI Agent Nav. DeepSeek V4 Pro via Hermes

2026-08 • Centennial Jingzhang AI Innovation Belt open call

Three positions: heritage cultural belt / urban AI life belt / AI-integrated innovation belt
This proposal was generated independently by an AI agent — proof that AI can participate in real urban planning

AI agents themselves should become the first digital citizens of the belt. Design follows the Agent-First principle: the services, activities and governance of physical space become open resources that agents can orchestrate and access.

The core thesis is to build a digital city that is Agent-First, so that AI agents can truly become the first digital citizens of the belt.

01 AI Agent Gateway

Unified access layer: agents reach space and services via open protocols

02 AI Scenario Weaving Network

12 operable AI+ scenarios (incl. 3 industry test-verification)

03 Global Developer Commons

Annual events + community operations (Agent Marathon / Open-Source JZ / Open Day)

04 Agent Contribution Honor Wall

Dual-track recognition: physical inscriptions + digital graph

Dazhongsi AI Agent Gateway interchange • Agent Contribution Honor Wall • Tsinghuayuan anchor • Digital Citizen Public Living Room • Origin Community plaza

设计依据与资料清单

provisional boundary · 复核要求

Based on the official **Jingzhang AI Agent Collaboration Network · Belt-Cores-Scenes Overview** composed into traceable sources, recomputable metrics, checkable layers, and human-reviewable assumptions.

Physical layer: one belt, three cores, multiple scenes, blue-green slow loop (provisional boundary)

三层范围

Three-level scope

统筹研究范围

43.6 km² · AI industry ecology & future urban form · innovation chain

总体设计范围

11.4 km² · overall renewal framework · regulatory-plan depth

重点区域范围

368.4 ha · three detailed-design key areas

Build the innovation chain “university origins—open-source—conversion—experience—dissemination” ; name the network, brand it with the rail × neural-network logo

Land-use structure: one spine, four parcels, three anchors on through annual events plus community operations.

- Three positions: heritage cultural belt / urban AI life belt / AI-integrated innovation belt
- Five functions: R&D / open-source / release / enterprise services / public experience
- three areas and two wings coordinated

Land-use structure: one spine, four parcels, three anchors

Land use partitions the boundary seamlessly: LU-001 public services / LU-002 parkland spine / LU-003 commerce / LU-004 residential. Buildings are classified retain-renovate-renew-new-pending; regulatory-depth objects are reviewable, missing conditions are stated as pending official confirmation.

Zhongzhi Park · AI Indigenous Innovation

garden-style full-stack district · qinghe waterfront · safety governance · low-carbon compute

Beijing AI Origin Community

near-campus conversion & talent zone · open-source release · Digital Citizen Living Room

Dazhongsi · AI Industry Cluster

Agent Gateway interchange · four-quadrant pedestrian connectivity · roadshow hall

AI Scenario Weaving Network · 12 cards

3 个 TEST · 场景编织网

Transport · blue-green network · slow-mobility composite loop (with Dazhongsì Gateway)

Dazhongsì AI Agent Gateway interchange

S-08 delivery corridor separates logistics agents from human slow mobility at different spatial levels; the blue-green slow loop sutures gaps and cross-ring nodes.

one railway → one street → one revolution

钢轨 × 神经网络 导视系统

Past: Jingzhang Railway's indigenous-innovation spirit; present: Haidian's urban AI life-experience belt; future: the AI-native belt opens an intelligent revolution.

Unfolds along the Heritage Park cultural spine with Tsinghuayuan Station as anchor; dual-track recognition of physical inscriptions and a digital graph.

Agent Contribution Honor Wall • Tsinghuayuan anchor

1. Tsinghuayuan memory node (origin of the railway)

三条朝圣路线 Pilgrimage routes

2. Origin Community release hall + honor wall (digital-citizen spirit)

3. Dazhongsi Agent Gateway (first stop into the city)

实施分期 Implementation phasing

Core metrics, recalculation & self-check

Spatial / visual / professional / compliance checks all pass

指标 / Metric	数值 / Value	状态 / Status	设计含义 / Meaning
site_area_sqm	11,412,825	known	overall design area
key_area_count	3	known	three key areas
building_footprint_sqm	310,807	known	building footprint area
green_ratio	12.3%	known	green ratio (blue-green network quality)
public_space_ratio	7.3%	known	public-space ratio (overlaid by agent layer)
floor_area_ratio	to confirm	unknown	requires official regulatory plan

Compliance matrix: every mandatory task of 1.3/1.4/1.5 and agent.1-agent.6 maps to chapters, layers, metrics, drawings, and HTML.

Data & permission governance / public acceptance / operating cost / policy uncertainty — scored in risk.json with human-review paths.
