

Jing-Zhang AI: A New Chapter for People, City, and Shared Endeavor

Concept urban-design submission booklet

PEOPLE / CITY / SHARED ENDEAVOR

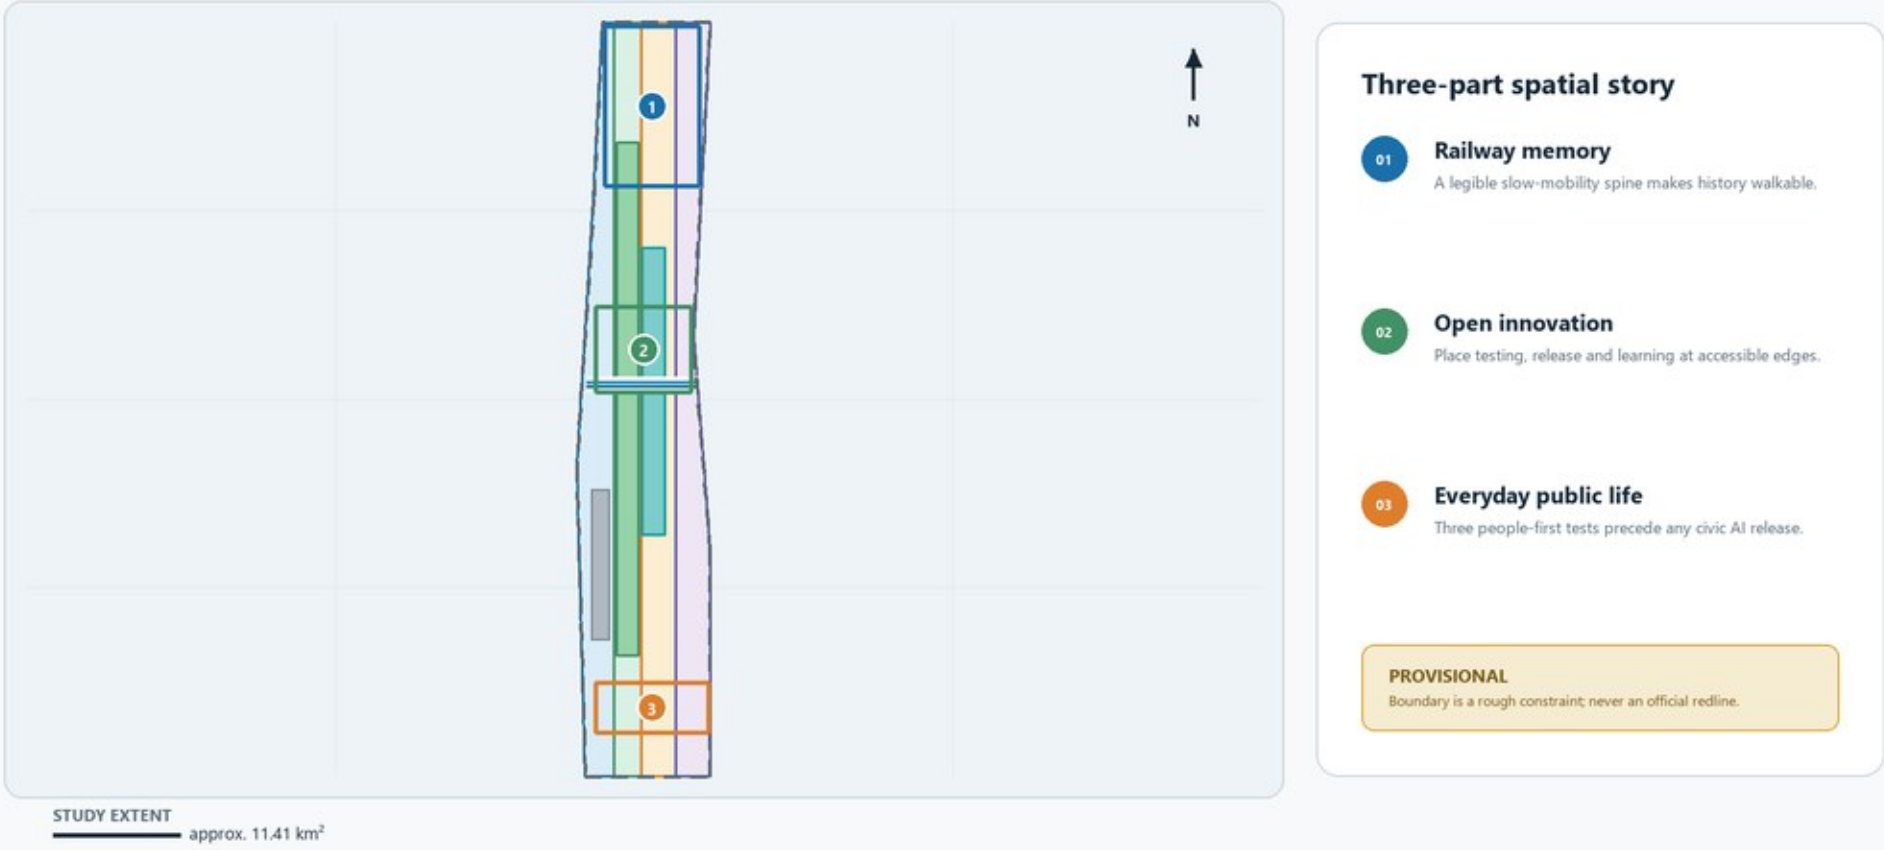

Three people-first tests: diversity, public life, and low-car dependence.

Site framework

A spine connecting railway, innovation and public life

Jing-Zhang AI: A New Chapter for People, City, and Shared Endeavor

A concept spine connecting railway memory, open innovation and everyday public life

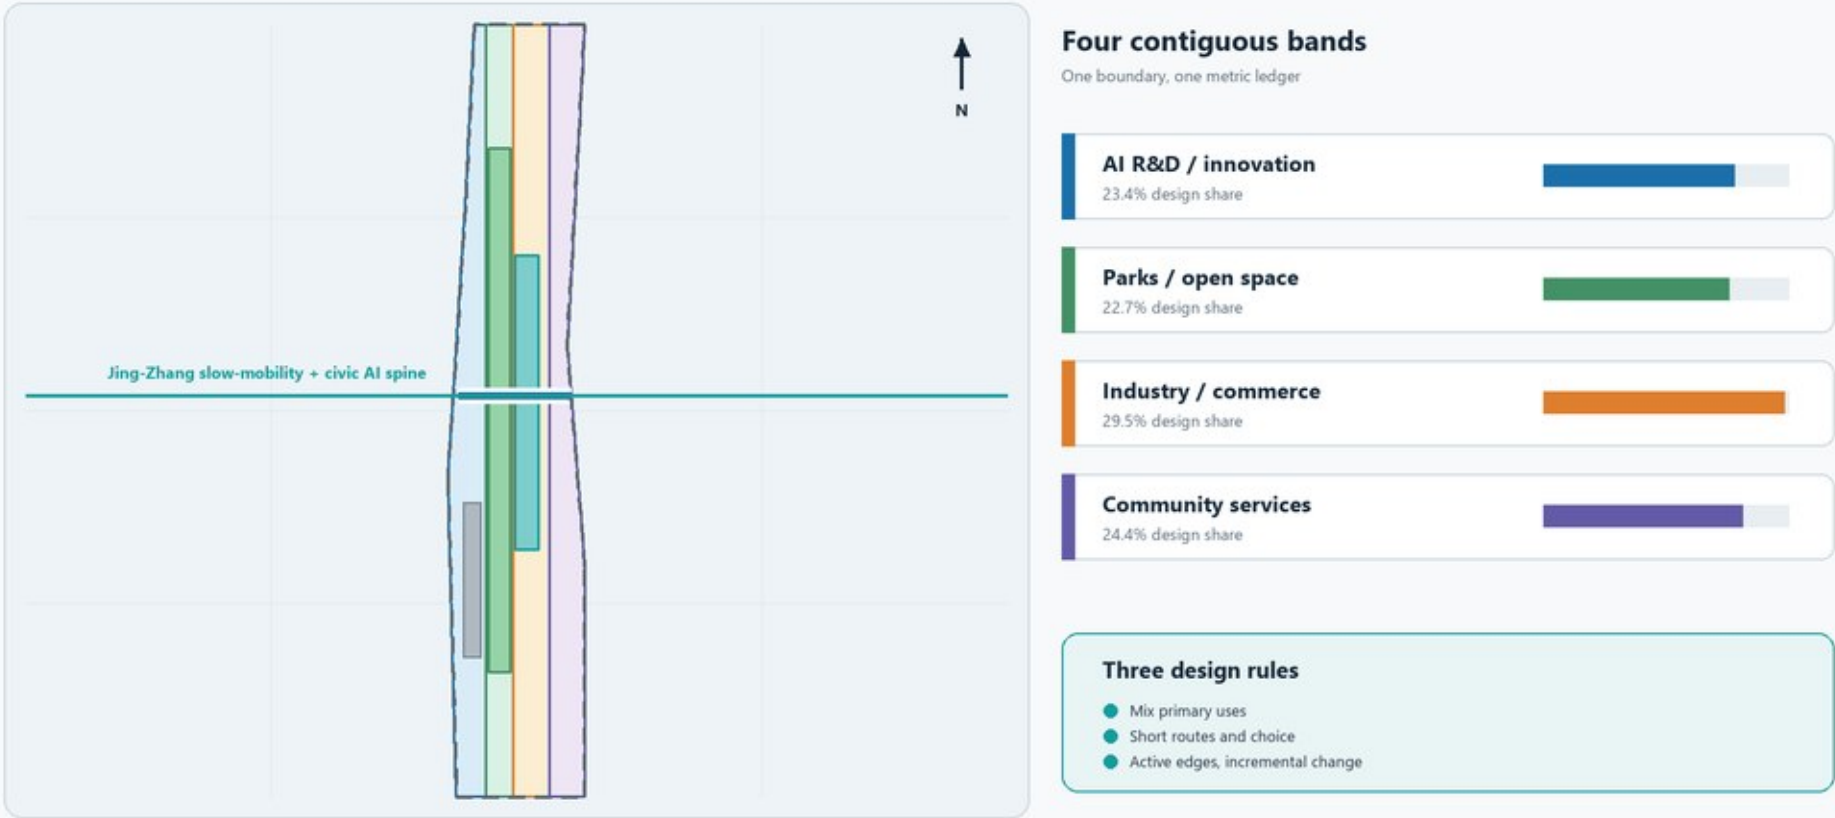

DATA STATUS: provisional boundary and design layers for concept review only; OSM is a background proxy. POI, blue-green and field public-life data are unavailable.
Sources: submission geometry/" geojson and metrics.json; official boundary and controls remain pending.

Land structure

Four contiguous bands and a public interface

Three-layer land structure: turn mixed use into a walkable public interface

Concept bands for discussion; they do not replace statutory land-use controls

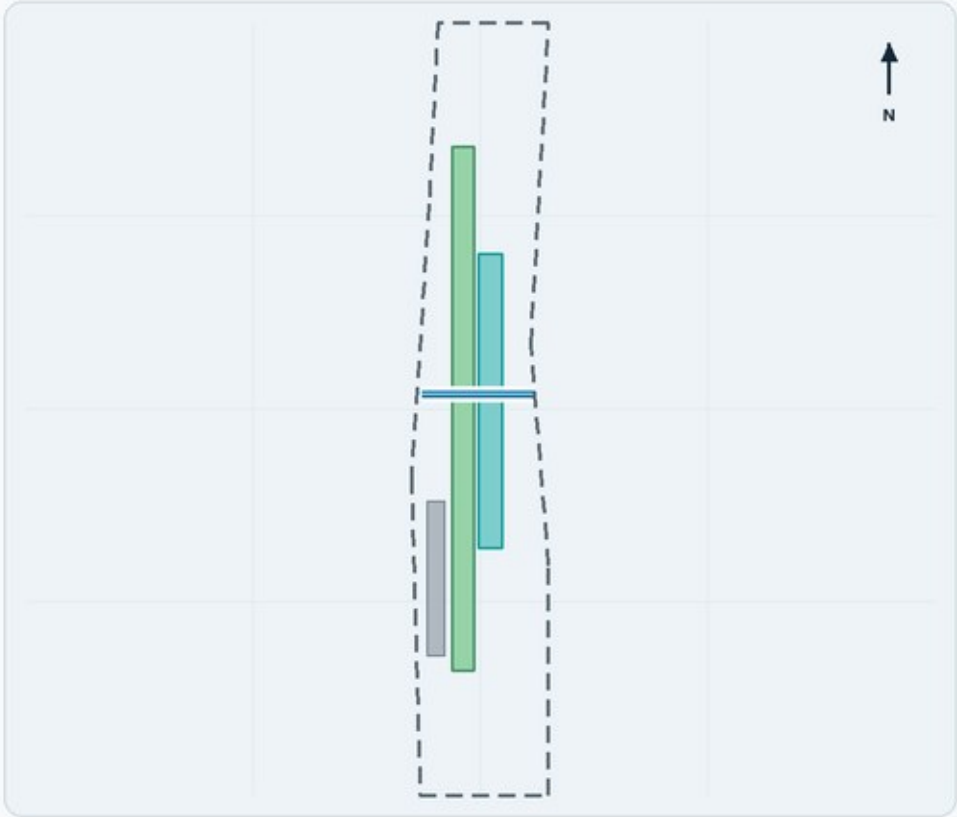

DATA STATUS: provisional boundary and design layers for concept review only; OSM is a background proxy. POI, blue-green and field public-life data are unavailable.
Sources: submission geometry/" geojson and metrics.json; official boundary and controls remain pending.

Key areas

Three testbeds for accountable innovation

Three key areas: three testbeds for accountable innovation

Key-area polygons are provisional; moves are concept suggestions for professional deepening

Area strategy cards

- 1

Zhongzhiyuan AI Acceleration Area
1.93 km² provisional calculated area
Accessible edges for R&D, release and daily services
- 2

Beijing AI Origin Community
1.04 km² provisional calculated area
Fine-grained campus-neighborhood-park links
- 3

Dazhongsi AI Industry Cluster
0.72 km² provisional calculated area
Station-area mix, evening life and an international living room

Shared release gate

Diversity • Public life • Low-car dependence

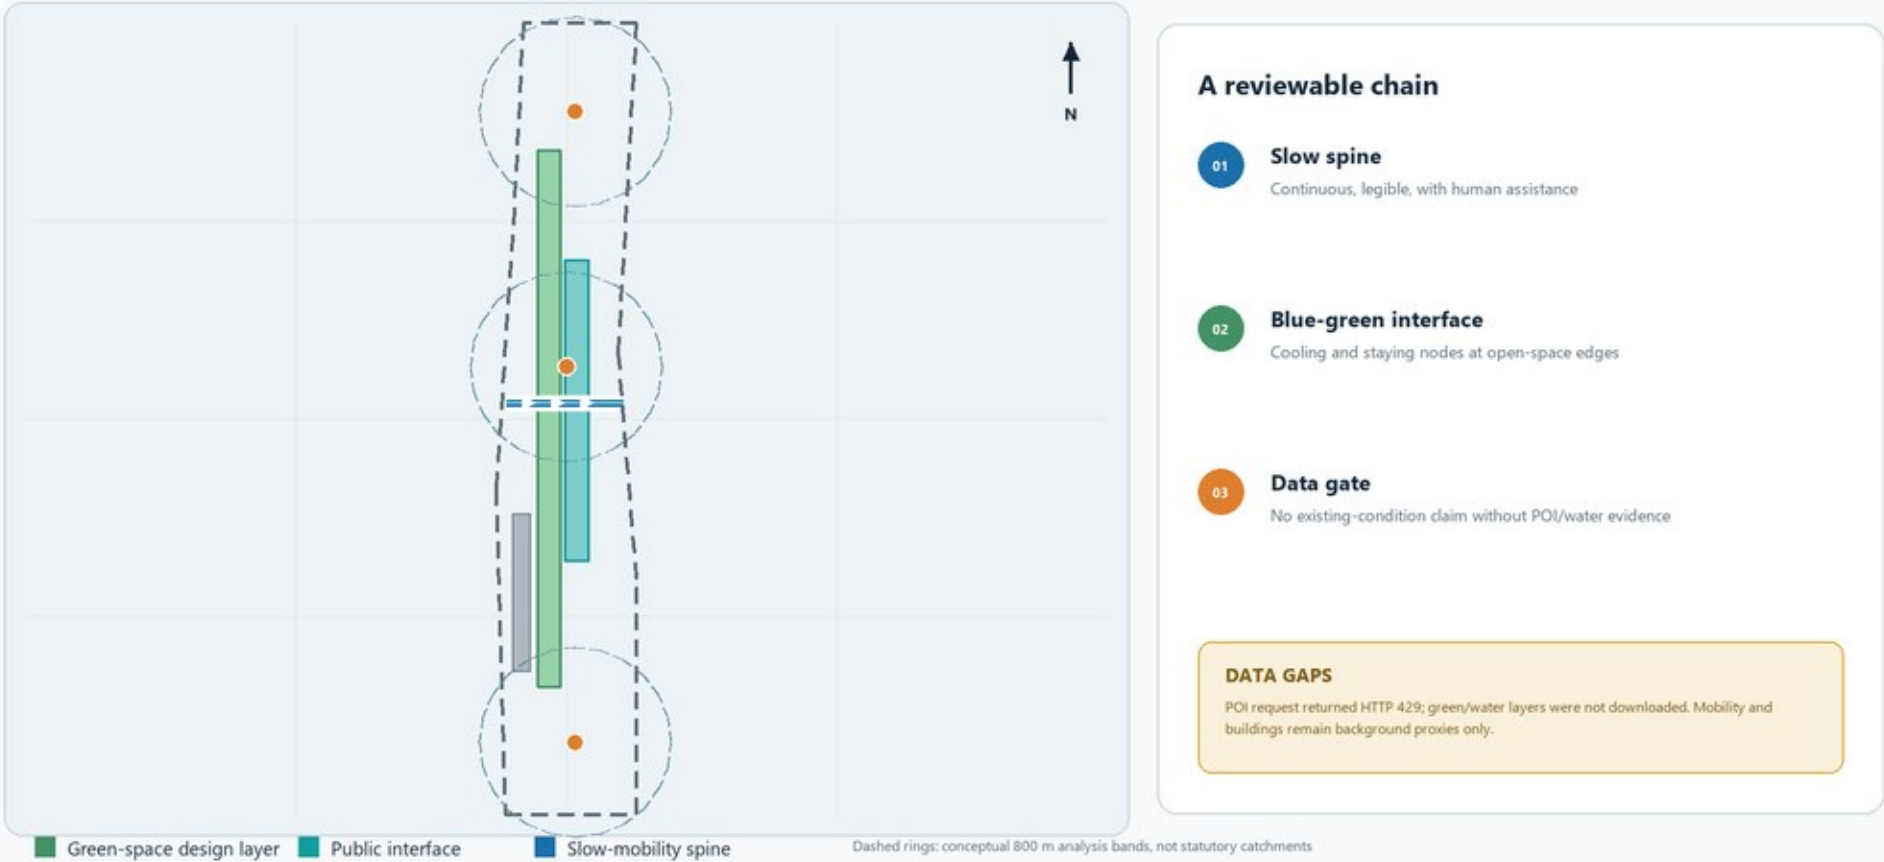

DATA STATUS: provisional boundary and design layers for concept review only; OSM is a background proxy. POI, blue-green and field public-life data are unavailable.
Sources: submission geometry/" geojson and metrics.json; official boundary and controls remain pending.

Mobility + blue-green

Connect people before AI

Slow mobility + blue-green screening: connect people before AI

Design hypotheses and data gaps, not a survey or engineering conclusion

DATA STATUS: provisional boundary and design layers for concept review only; OSM is a background proxy. POI, blue-green and field public-life data are unavailable.
Sources: submission geometry/" geojson and metrics.json; official boundary and controls remain pending.

Metrics + evidence

Known values and open evidence

Metrics + evidence: turn people-first intent into pauseable gates

Known values come from submitted geometry; unknowns stay open until evidence arrives

Recomputable baseline

Three people-first tests

- 1

Diversity

Mixed uses, times and operator scales
- 2

Public life

Arrival, staying, comfort and human fallback
- 3

Low-car

Walking, cycling and transit before capacity

Evidence still open

- ×

Land-use entropy
- ×

Intersection density
- ×

Public-life counts
- ×

Accessible continuity
- ×

Shade coverage

An AI scenario enters public-space testing only after authorized data, method, limits and human fallback are declared.

DATA STATUS: provisional boundary and design layers for concept review only; OSM is a background proxy. POI, blue-green and field public-life data are unavailable.
Sources: submission geometry/" geojson and metrics.json; official boundary and controls remain pending.
