

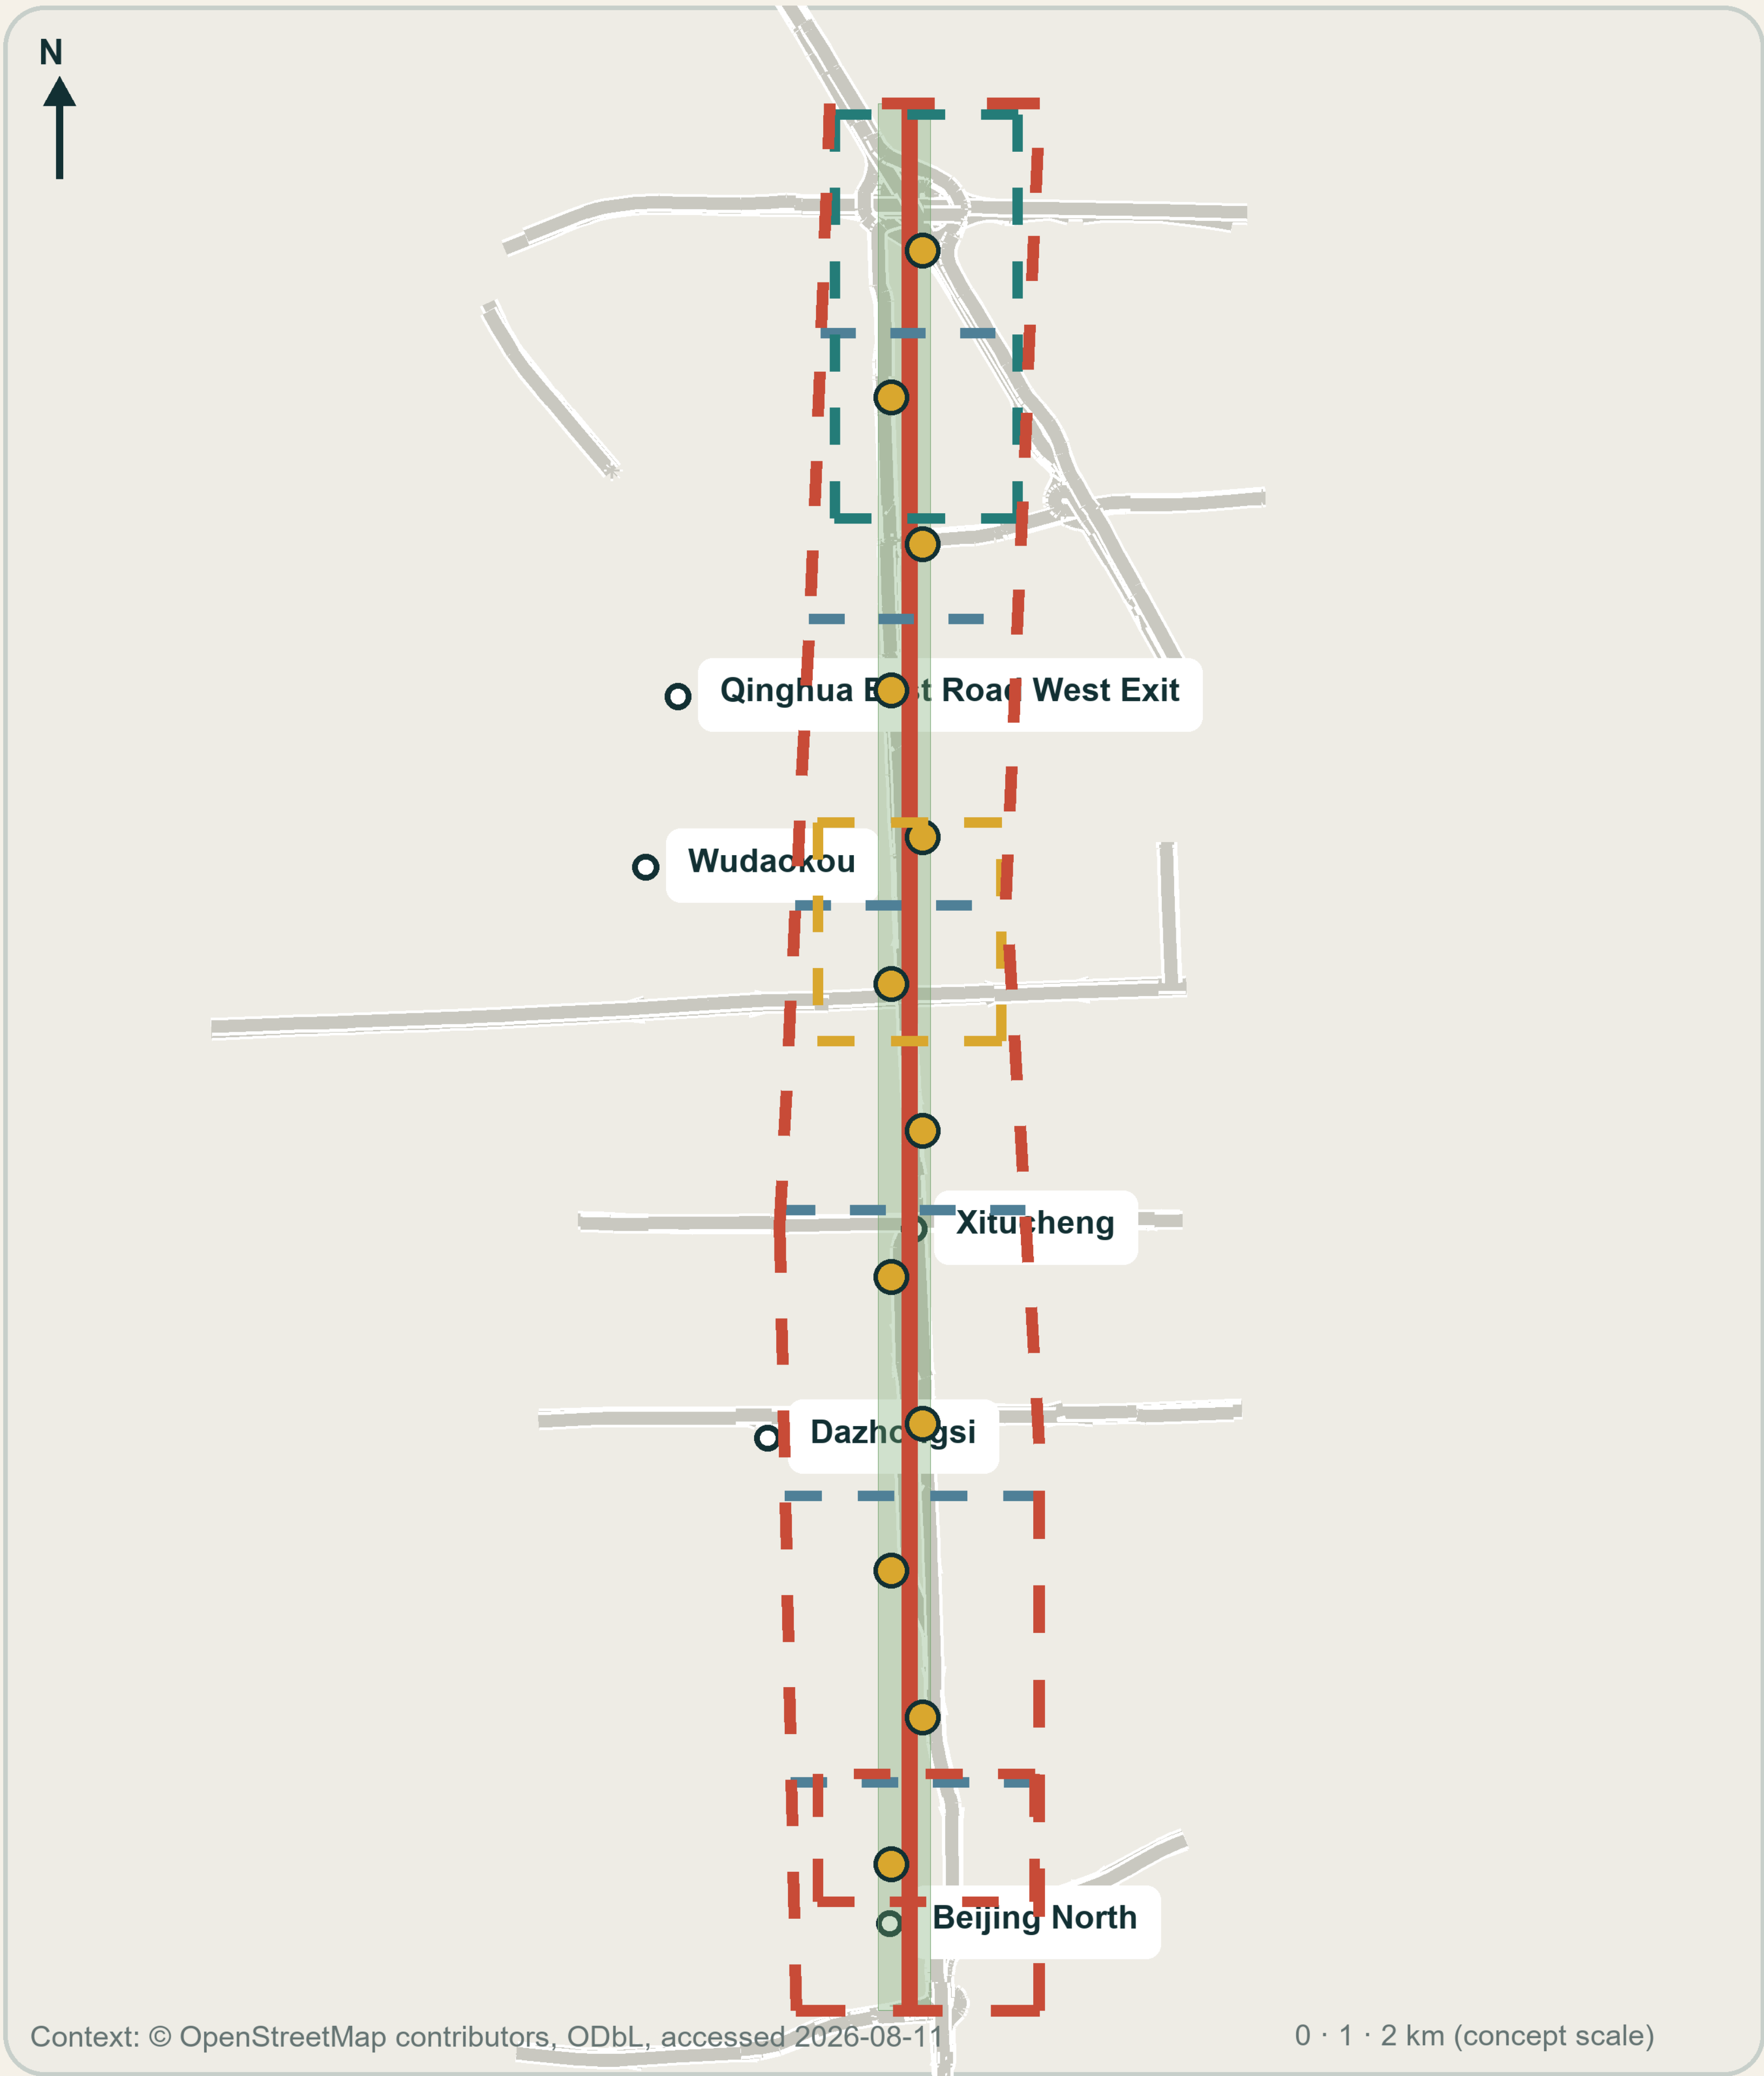

FIG.01 / OVERALL

A REAL CORRIDOR, NOT AN ABSTRACT SANDBOX

PROVISIONAL | CONCEPTUAL | OFFICIAL DATA PENDING

The heritage corridor links the North Fifth Ring, university districts, Dazhongsi and Beijing North; public rights stay, AI remains replaceable.

**01 CENTURY BASELINE**  
Heritage, ecology, walking and public service do not disappear when models change.

**02 THREE CHANGEOVER YARDS**  
Zhongzhiyuan tests technology, AI Origin tests social fit, Dazhongsi tests adoption and exit.

**03 TWO BUFFER WINGS**  
Zhongguancun supplies knowledge and institutions; Xiaoyuehe supplies ecology and lived feedback.

**04 TWELVE TIME MARKS**  
Every key area carries daily, annual, decennial and century duties—not one clock per area.

**! KEY DISCLOSURE** | The repository's provisional PROV-KEY-003 centroid is about 2.26 km from Dazhongsi and 0.23 km from Beijing North. It is not shifted here; the package must be recalculated with official geometry.

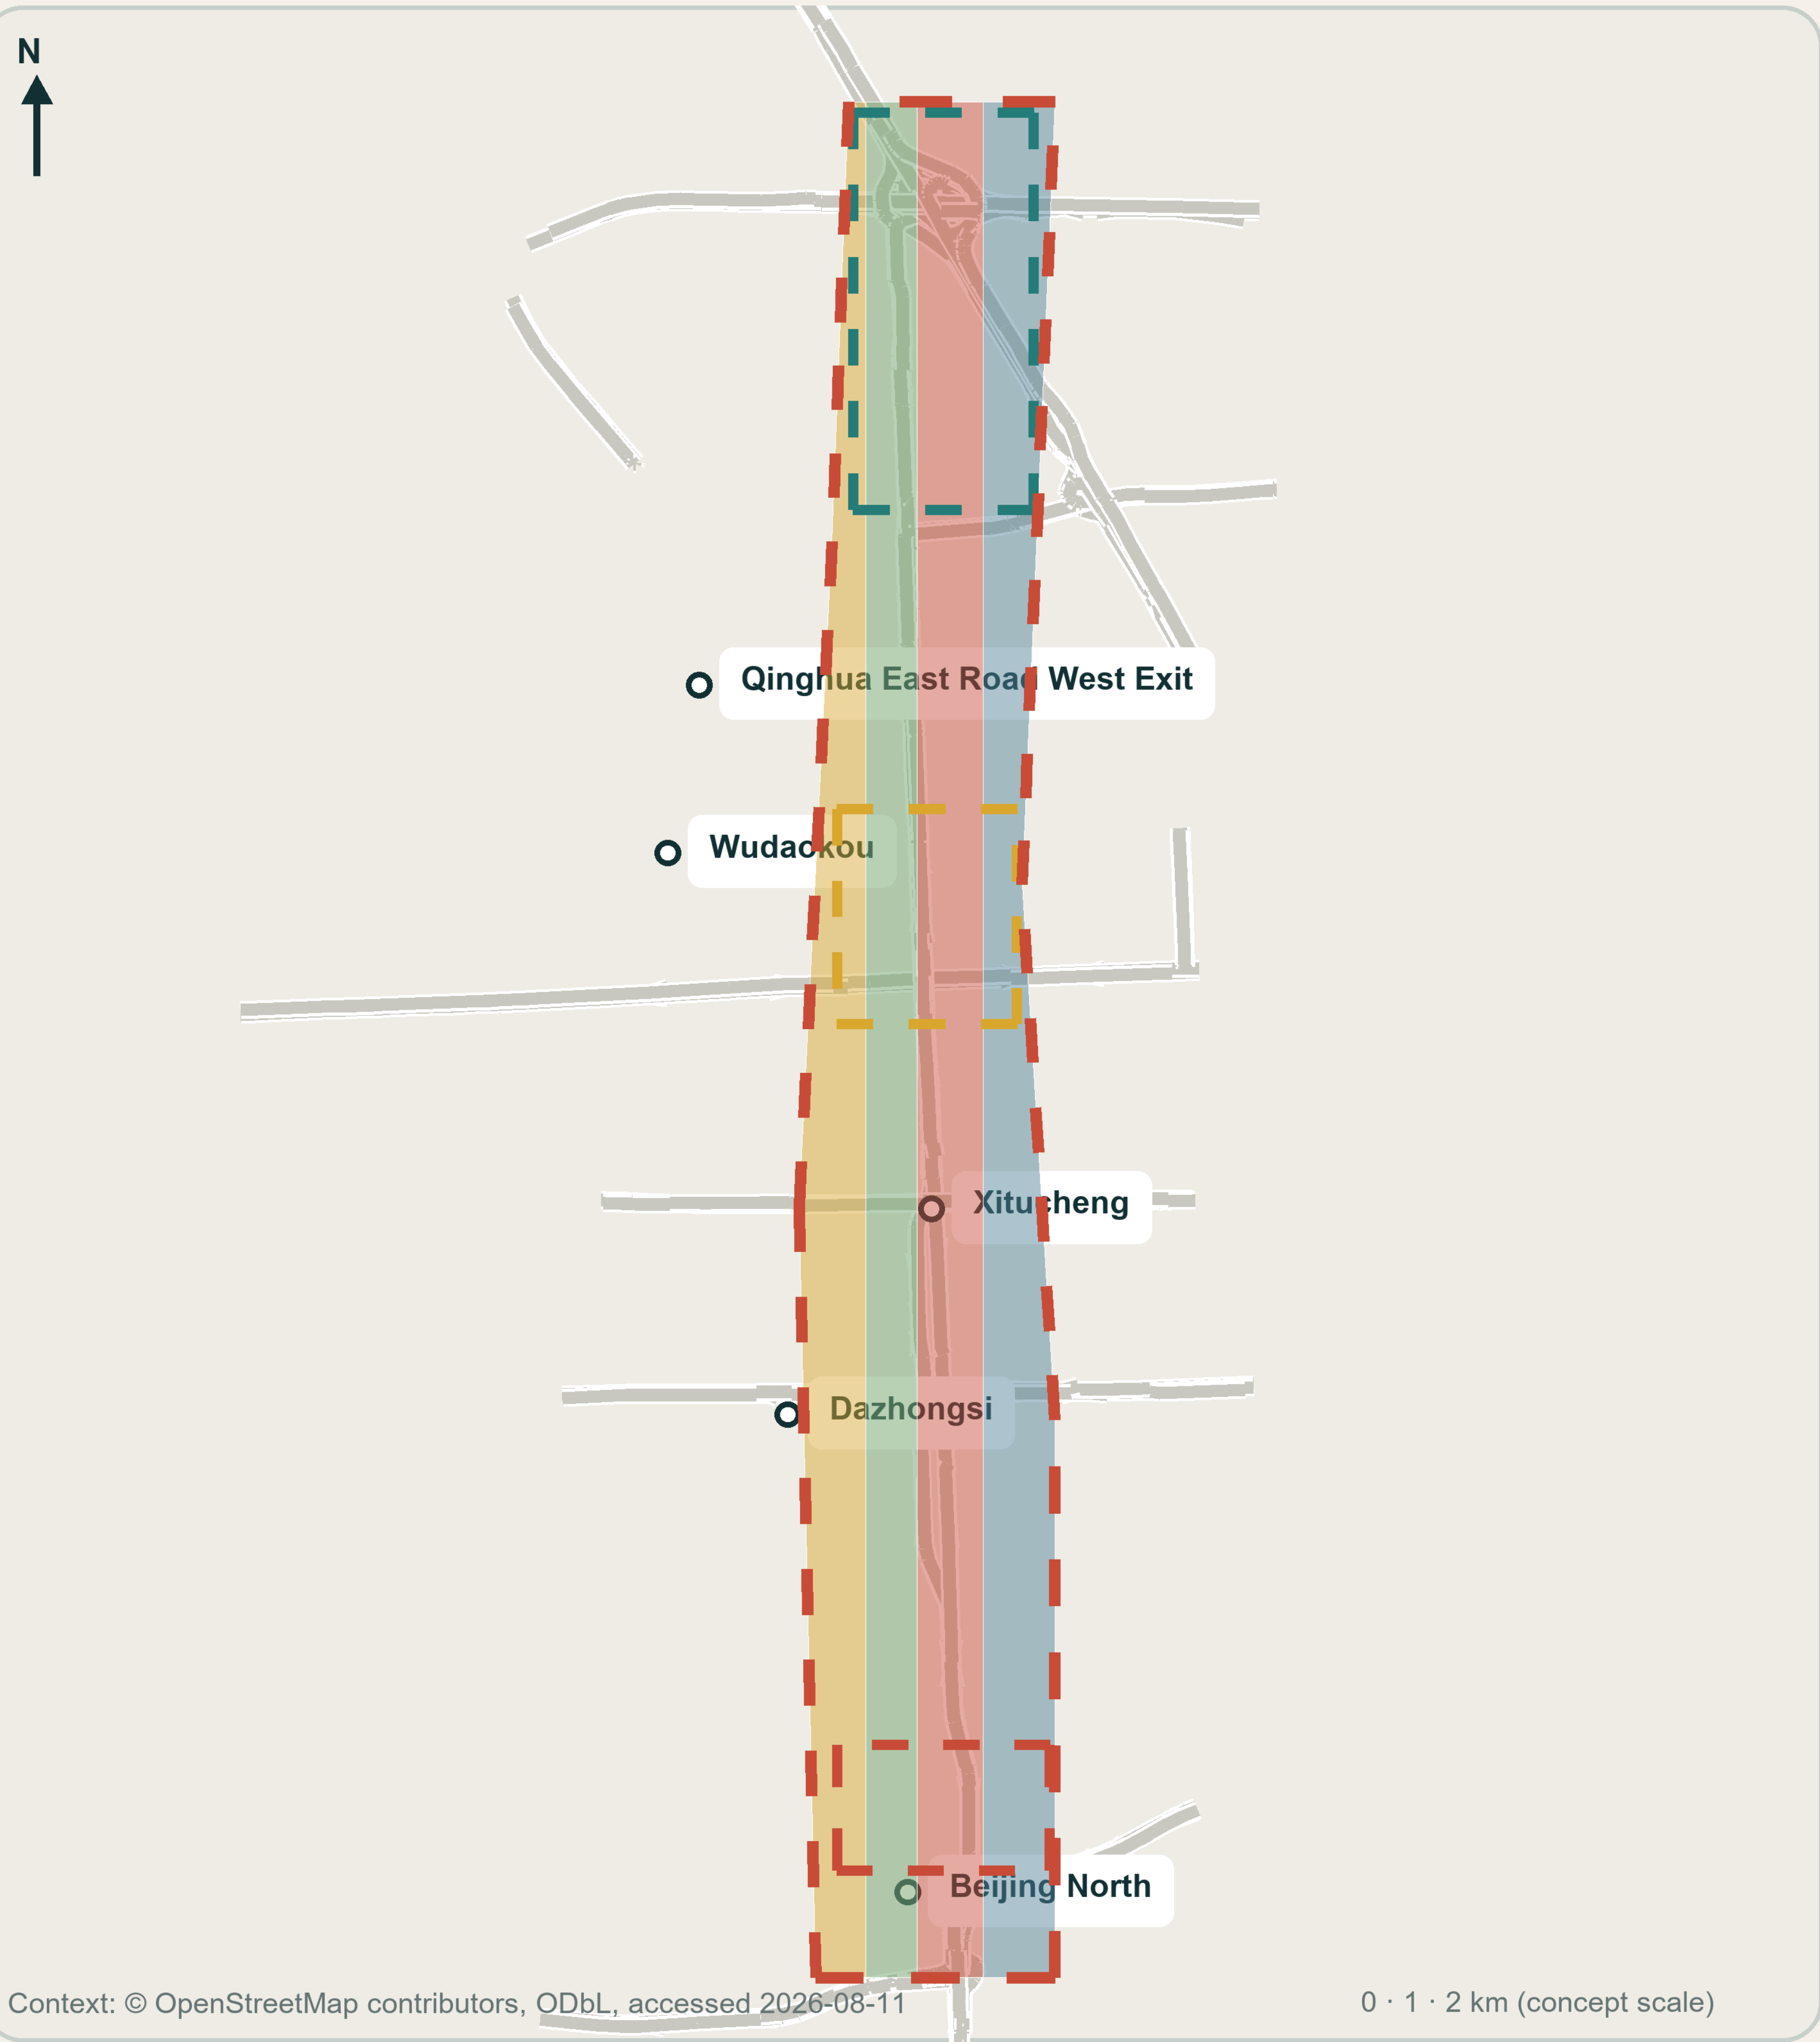

FIG.02 / LAND + CLOCKS

SLOW VARIABLES FIRST; FAST VARIABLES EARN ENTRY

The conceptual land-use plan maps long-term capacities, not statutory zoning: the public baseline stays continuous while buildings and equipment change through reversible interfaces.

PROVISIONAL | CONCEPTUAL | OFFICIAL DATA PENDING

FOUR CAPACITY BANDS

- Research + translation
- Century Baseline public green
- Replaceable AI production
- Lasting-life community support

FOUR CLOCKS × EVERY AREA

- 1 DAY**  
Safety, faults, human takeover
- 1 YEAR**  
Permit, data, public feedback
- 10 YEARS**  
Use, ground floor, adaptation
- 100 YEARS**  
Heritage, ecology, walking, rights

CIVIC PLUG-IN PROTOCOL | EVERY AI MODULE DISCLOSES

- 01** Public problem + minimum data
- 02** Decisions never delegated
- 03** Owner, version + expiry
- 04** Human review, stop + fallback
- 05** Resource budget + public evidence

SECTION LOGIC | Century: heritage + public passage → 10 years: adaptable frame → year: renewable fit-out + permit → day: stoppable devices + staffed service

FIG.03 / KEY AREAS

THREE AREAS, THREE TESTABLE RESPONSIBILITIES

Each area has coordinate context, three spatial moves, four clocks and stop conditions; provisional polygons locate, never legitimise.

PROVISIONAL | CONCEPTUAL | OFFICIAL DATA PENDING

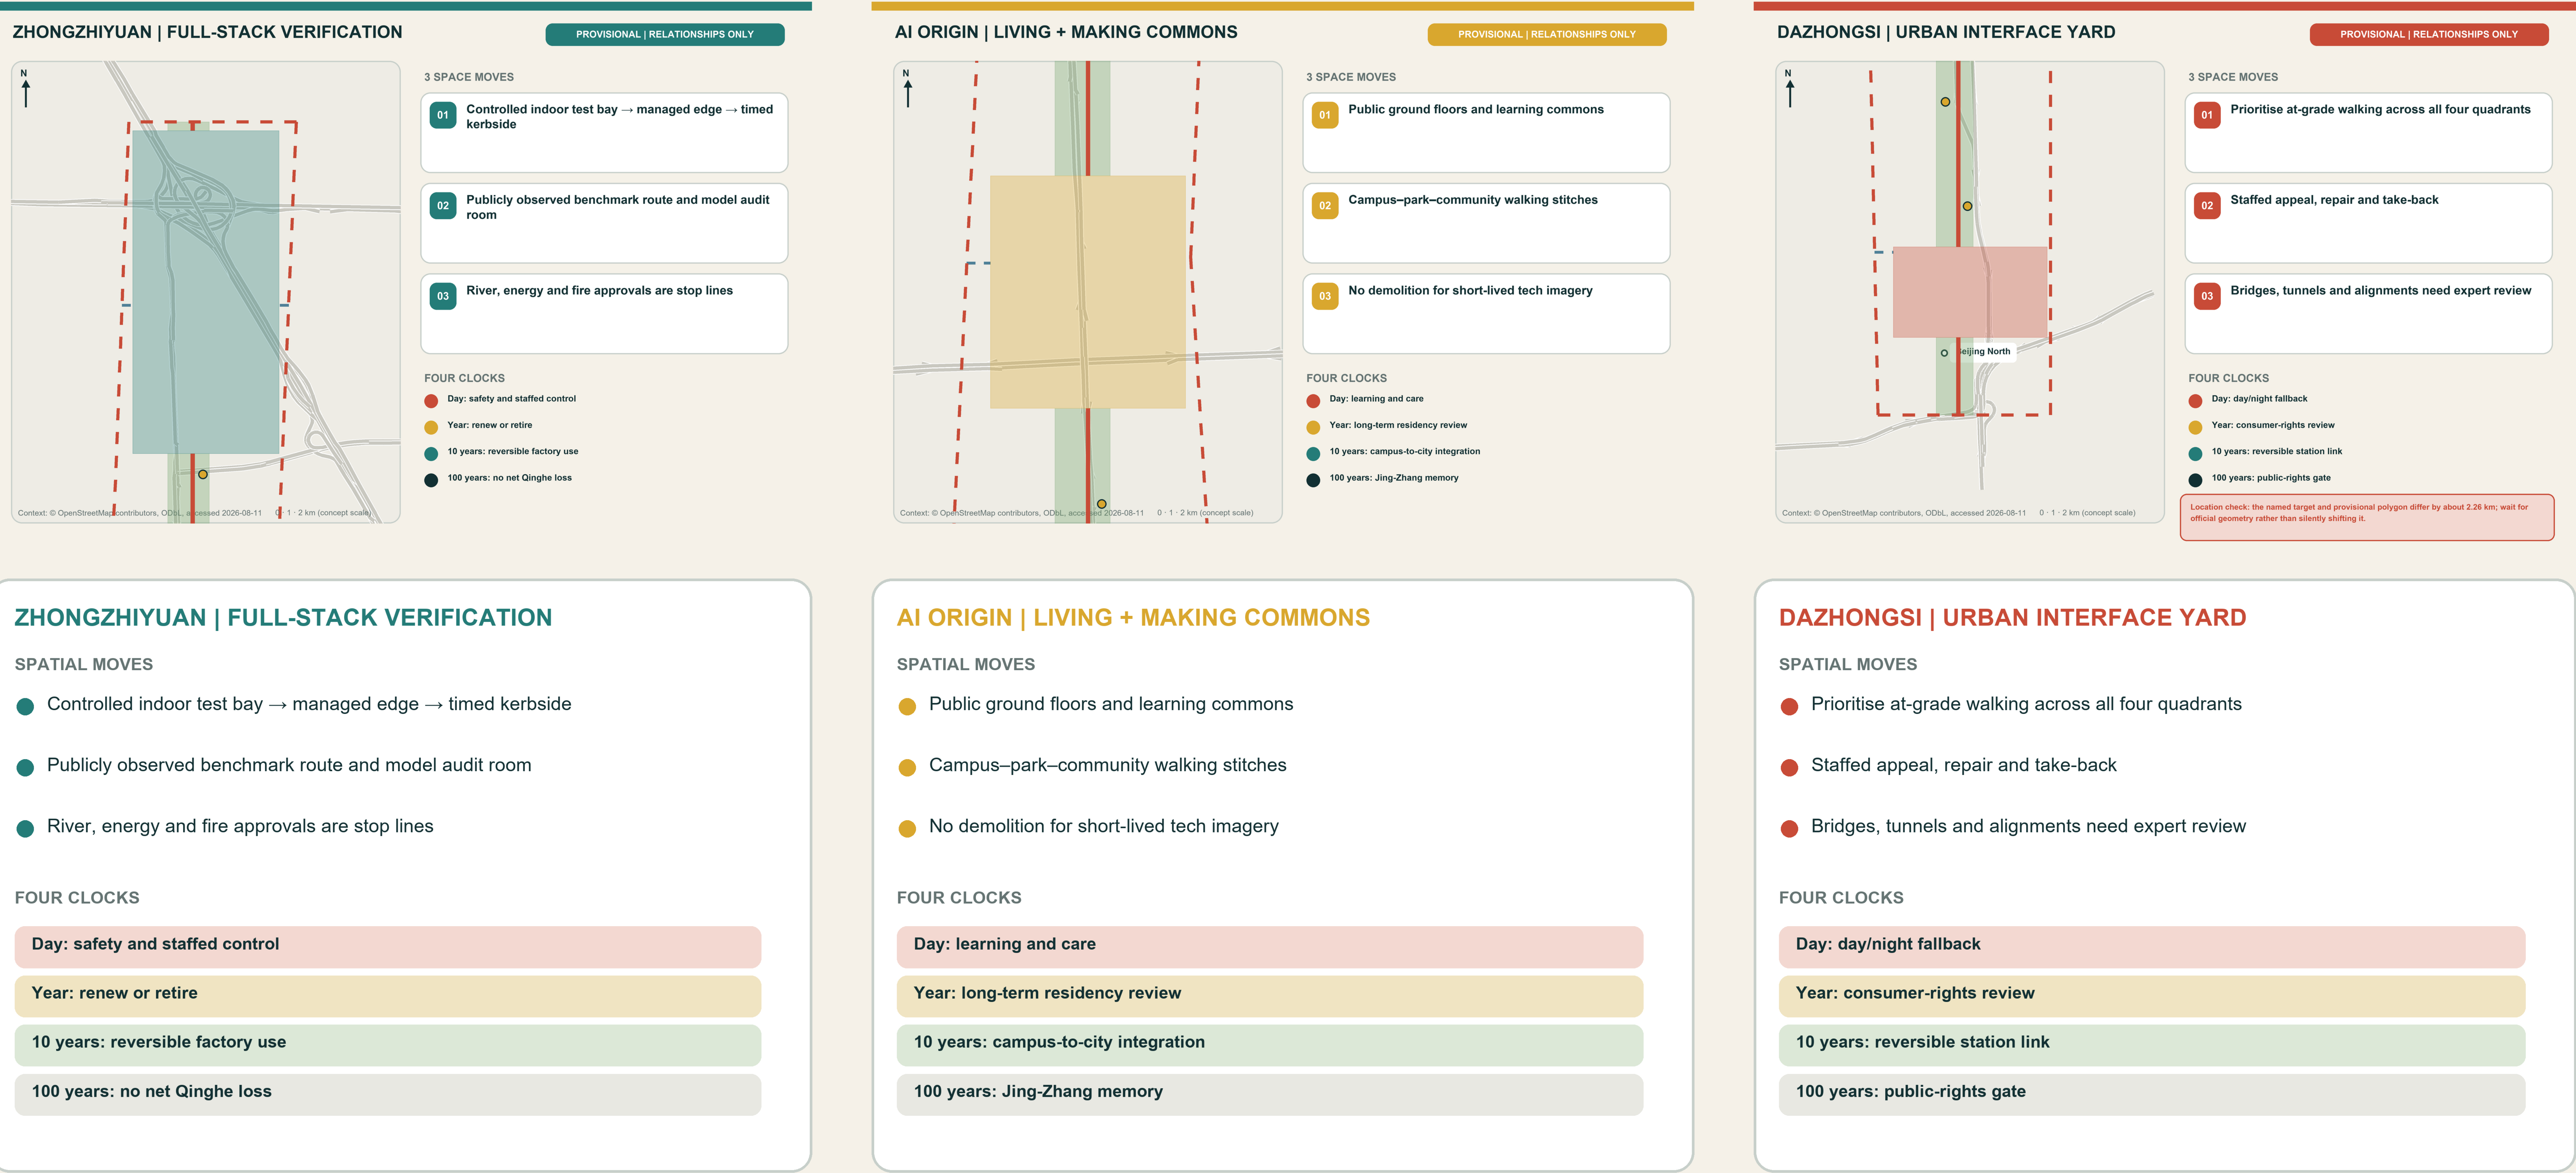

FIG.04 / MOBILITY + BLUE-GREEN

COMPLETE THE HUMAN JOURNEY BEFORE AI AUGMENTS IT

PROVISIONAL | CONCEPTUAL | OFFICIAL DATA PENDING

Existing rail and major roads provide context; the design adds one public spine, six required east-west connections and twelve stoppable Time Marks.

SERVICE LADDER

- 01

**BASE JOURNEY**  
Walk, wheelchair, cycle, transit
- 02

**PUBLIC GUARANTEE**  
Shade, seats, physical signs, staffed help
- 03

**AI AUGMENTATION**  
Navigation, scheduling, robots, digital twin
- 04

**FAILURE FALLBACK**  
Same-day stop, human takeover, full non-digital route

SIX LINKS DO NOT MEAN SIX BRIDGES

They indicate required connection corridors: fix surface crossings, accessibility, signs and kerbs first; bridges or tunnels require professional transport evidence. Journey test: station exit → at-grade crossing → shaded spine → staffed destination, with or without AI.

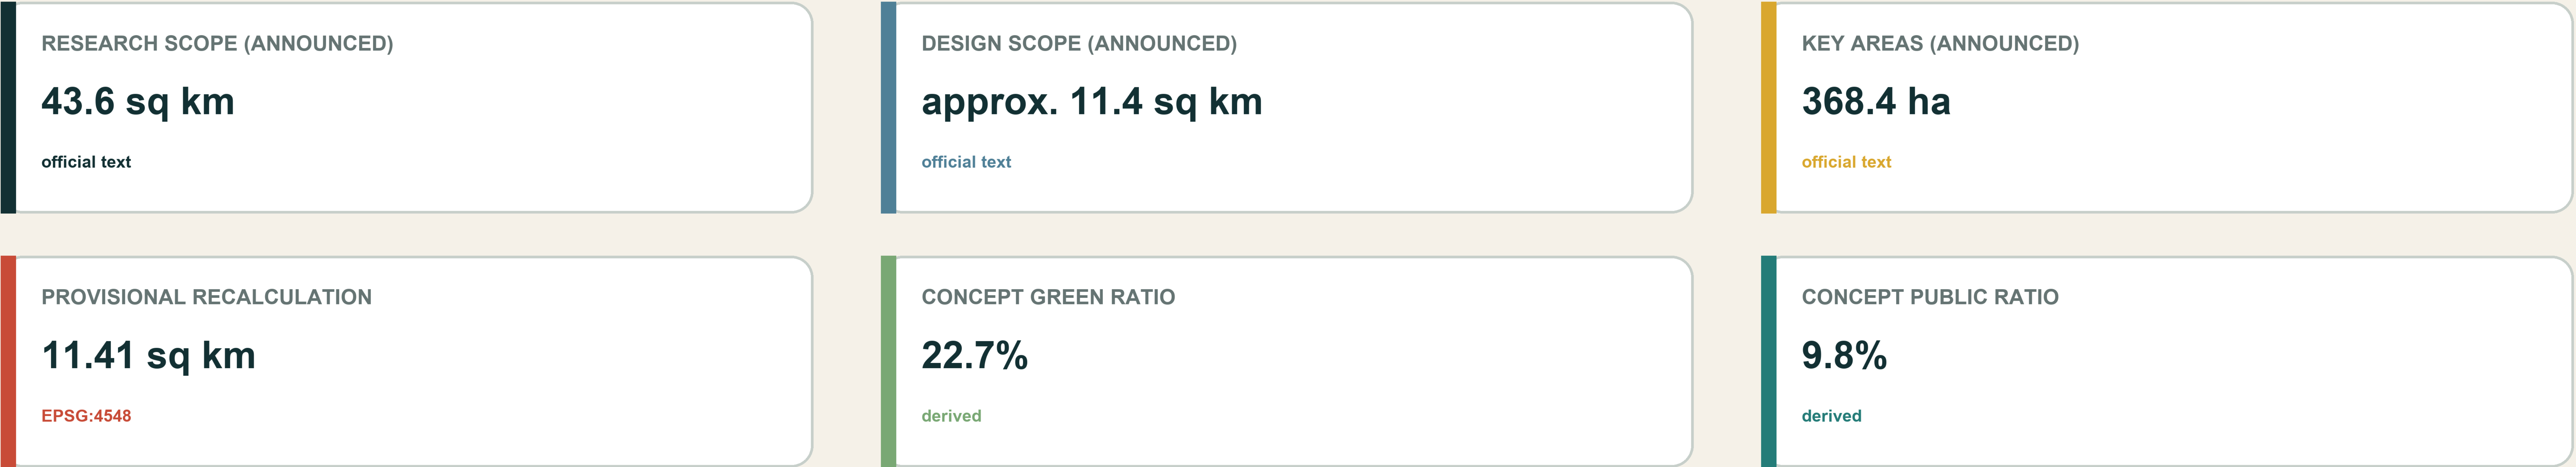

FIG.05 / METRICS + EVIDENCE

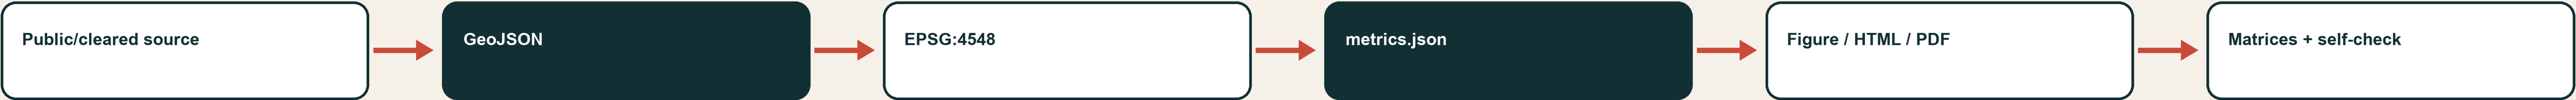

SHOW WHAT IS KNOWN BESIDE WHAT IS NOT

Announced values, provisional recalculation and concept targets remain separate; computable does not mean approved, and precision cannot legitimise provisional geometry.

PROVISIONAL | CONCEPTUAL | OFFICIAL DATA PENDING

EVIDENCE CHAIN

STOP RULES / PENDING DATA

- 01

Official three-scale polygons
- 02

Statutory zoning + road lines
- 03

Surveyed buildings + ownership
- 04

Heritage, river, utilities + fire
