

JING-ZHANG TEMPORAL STITCH

One Corridor, Nine Needles, Three Clocks in Coordination

PROVISIONAL BOUNDARY WARNING: All geometries are approximate. official_boundary = false.

Data confidence: medium. Full recalculation required when official precise boundaries are released. Not planning targets.

DESIGN CONCEPT

The Jing-Zhang Railway has divided Haidian's northwest into east-west halves for over a century.

Core proposition: Design every interface between park and city, not the park interior.

Introduce temporal dimension: same interface serves different populations at different times of day.

Physical improvements remain effective when AI is shut down (fail-safe by design).

KEY METRICS (provisional geometry)

Site Area:	11,412,825 sqm (11.4 km2)
Green Ratio:	24.17% (geometric calculation, not target)
Public Space Ratio:	10.44% (geometric calculation, not target)
Suture Nodes:	9 (east-west interface repair points)
Temporal Programs:	27 (9 nodes x 3 clock layers)
Phasing:	3 periods: Near 4 + Mid 2 + Long 3 nodes

NINE SUTURE NODES

Zhongzhi Park (2 nodes)	N-01 Knowledge Permeation N-02 Tidal Interlace
AI Origin (3 nodes)	N-03 Entrepreneurship Incubation N-04 Intergenerational Weave N-05 Nature Permeation
Dazhongsi (4 nodes)	N-06 Commercial Suture N-07 Memory Anchor N-08 Health Suture N-09 Data Suture

THREE TEMPORAL CLOCKS

Day Clock:	24-hour rhythm orchestration per node (commuter/student/elder/visitor time-slots)
Season Clock:	Seasonal functional switching (semester/vacation, planting/harvest, festival calendars)
Era Clock:	Decade-scale progressive opening (T0 baseline -> T1 pilot -> T2 autonomous)

AI FOUR-LAYER CLOSED LOOP

Diagnose (barrier identification) -> Generate (parametric repair) -> Schedule (temporal orchestration) -> Monitor (feedback)

Each layer has: input/output spec, confidence threshold, human confirmation gate, non-automatable items list,

failure fallback (fixed timetable + manual), grievance channel, and stop conditions.

All physical improvements persist when AI is off. No surveillance, no face/gait/device-ID collection.

IMPLEMENTATION PHASING

Phase 1 (Near-term, 1-3 years)	4 nodes: N-06, N-07, N-08, N-09 in Dazhongsi cluster
Phase 2 (Mid-term, 3-5 years)	2 nodes: N-01, N-02 in Zhongzhi Park
Phase 3 (Long-term, 5-8 years)	3 nodes: N-03, N-04, N-05 in AI Origin

THREE KEY AREAS - DETAILED DESIGN

ZHONGZHI PARK AI ACCELERATION ZONE (192.1 ha)

- Garden-type full-stack innovation district serving Zhongguancun Science City north axis
- Physical: East boundary wall removal + Knowledge Exhibition Corridor along park edge
- Temporal: Weekdays 9-18h industrial priority (delivery, logistics); after 18h community activity mode
- Nodes: N-01 Knowledge Permeation (university-park interface), N-02 Tidal Interlace (commuter crossing)
- AI: Real-time crowd sensing adjusts crossing signal timing; seasonal exhibition rotation

AI ORIGIN COMMUNITY (104.3 ha)

- Campus-adjacent incubation and talent community bridging universities and industry
- Physical: Grade-difference repair via shared ramp garden; 5-min slow mobility to incubation spaces
- Temporal: Semester/vacation switching; shared intergenerational spaces for elderly + students
- Nodes: N-03 Entrepreneurship (startup hub), N-04 Intergenerational (elder-youth), N-05 Nature (bioswale)
- AI: Matching algorithm for shared spaces; seasonal planting calendar; rainwater detention monitoring

DAZHONGSI AI INDUSTRY CLUSTER (72 ha)

- Urban-type intelligent economy district around Dazhongsi metro station
- Physical: Four-quadrant pedestrian connectivity at station; heritage interpretation corridor
- Temporal: Weekdays business/roadshow; weekends public experience/cultural markets/health routes
- Nodes: N-06 Commercial (retail suture), N-07 Memory (heritage), N-08 Health, N-09 Data (community)
- AI: Visitor flow scheduling; heritage AR interpretation; health route personalization; community dashboard
