

JING-ZHANG · THE WAY FORWARD

A century-old railway did not end at arrival; a responsive intelligent city begins by answering back.

JING-ZHANG · THE WAY FORWARD

JINGZHANG CIVIC LOOP / ONE LINE · TWO WINGS · THREE ZONES · THREE STATIONS

CORE FIGURE 01 / OVERVIEW

Connect rail heritage, AI innovation and everyday life through a public loop that can be verified, returned and stopped.

SPATIAL ARMATURE

A Zhongzhiyuan · Truth
Calibration | Is it safe and trustworthy?

B AI Origin · Origins
Co-creation | Can a need become a prototype?

THE LINE
Jing-Zhang Knowledge & Validation Spine

WEST WING
Zhongguancun Technology Services

EAST WING
Xiaoyue River Scenario Enablement

C Dazhongsi · City
Feedback | Can people choose and appeal?

The Civic Loop is not a new road.

It is a stoppable public-learning mechanism:
validate → co-create → use → feedback → return.

Extant: repository provisional boundaries; basemap: © OpenStreetMap contributors, 2026-08-11, ODbL; overlay: conceptual recommendation.

Provisional boundaries are not official planning boundaries · Figures do not replace machine data

ONE LINE, TWO WINGS: STRUCTURE AND FUNCTION

LAND-USE STRUCTURE / FUNCTIONAL RELATIONSHIPS, NOT STATUTORY ZONING

CORE FIGURE 02 / STRUCTURE

A complete but low-confidence conceptual partition expresses functional relationships; civic interfaces and the loop connect them.

CONCEPTUAL FUNCTION PARTITION

0802 Technology R&D and validation

Zhongzhiyuan / professional validation

1401 Knowledge and blue-green open space

Jing-Zhang / everyday civic base

05 AI co-creation and industry services

Origin-Dazhongsi / services network

0702 Community life and public services

Basic services for all users

FIVE PUBLIC-SPACE PROTOTYPES

1 Calibration · 2 Co-creation · 3 Feedback
4 Knowledge pocket · 5 Low-disturbance observation

WHY THIS REMAINS A STRUCTURE DIAGRAM

The partition covers the provisional boundary to express functional relationships only. It does not determine statutory land use, FAR, demolition, road redlines or building scale.

Land-use codes follow official terminology; all partitions are design proposals and require full recalculation after official controls and ownership data arrive.

Provisional boundaries are not official planning boundaries · Figures do not replace machine data

02 ONE LINE / TWO WINGS / THREE DISTRICTS / THREE STATIONS

43.6 km² research · 11.4 km² overall design · 368.4 ha key areas

The public knowledge and validation line follows Jingzhang. Two wings connect Zhongguancun services and Xiaoyue River scenarios. Three stations are calibration, co-creation, and feedback interfaces embedded in the three districts.

03 DETAILED DESIGN OF THREE STATIONS

All key areas share one information structure: a core question, three spatial actions, civic interfaces, an honour-display node, and preconditions for phasing. Long labels sit outside the map with leader lines.

10 AI+ SCENARIOS / 7 PERSONAS / 6 VALIDATION GATES

Shared knowledge · Maintenance intake · Civic review · Walking diagnosis · Model safety · Embodied test · Data sandbox · Prototype clinic · Talent services · Ecology observation

Student founder · Research engineer · Small business · Older resident · Wheelchair user · Young family · International visitor

05 MOBILITY AND BLUE-GREEN FOUNDATION

Provisional geometry passes intake only; official boundaries require a complete recalculation before formal professional scoring.

MOBILITY, BLUE-GREEN AND PUBLIC SPACE: CONTINUITY FIRST

MOBILITY · BLUE-GREEN · PUBLIC REALM / ONE INTEGRATED BASE

CORE FIGURE 04 / SYSTEM

Secure continuous ground-level access, accessibility and everyday public space before connecting innovation scenarios; dashed lines mark ecology links pending review.

Basemap: © OpenStreetMap contributors, 2026-08-11, ODbL; overlays derive from submission GeoJSON; no road-redline or engineering claim.

Provisional boundaries are not official planning boundaries · Figures do not replace machine data

04 MOBILITY / BLUE-GREEN PUBLIC REALM

PROJECT PACKAGES / TRIGGERED PHASING

Public knowledge · Trustworthy validation · Origin co-creation · Civic rights · Blue-green observation

P0 Evidence → P1 Reversible pilots → P2 Controlled links → P3 Network operation

METRICS, EVIDENCE AND UNKNOWNNS: ONE RECOMPUTATION CHAIN

DECLARED VALUES ≠ PROVISIONAL GEOMETRY ≠ OBSERVED PERFORMANCE

CORE FIGURE 05 / EVIDENCE

Official declared values, provisional geometry recomputations and future observed performance remain distinct; missing controls remain null.

01 TWO NUMBER SETS MUST REMAIN DISTINCT

02 ONE DATA CHAIN UPDATES EVERY OUTPUT

EXPLICITLY UNKNOWN (value: null)

FAR and total floor area

Existing coverage and DRR decisions

Road redlines, station entrances and utilities

Accessibility, non-digital and operational baselines

Sources: metrics.json, geometry/*.geojson and compliance matrix; ratios are conceptual design-layer recomputations, not existing or statutory indicators.

Provisional boundaries are not official planning boundaries · Figures do not replace machine data

05 METRICS / EVIDENCE / UNKNOWNNS

KNOWN METRICS / SOURCES / ASSUMPTIONS

site_area_sqm 11,412,825.386 m² · green_ratio 17.58% · public_space_ratio 6.88% · building footprints 346,178.609 m²

Basis: official announcement, agent taskbook, site package, source registry, professional standards, and local OSM background. Licences and limits are recorded in sources.json.
