

Concept proposal • design-first spatial evidence • provisional geometry is not an official redline

01 Zhongzhuyuan | researcher + service worker

Diagram illustrating the process flow for Zhongzhuyuan (researcher + service worker). The process starts with 'personal task' (blue box), followed by 'food + rest' (green box), then 'voluntary working' (green box), and finally 'balanced rest period' (blue box). A red dashed line indicates a feedback loop from the end back to the start.

Notes: 1. Currently restricted from physical accessibility and limited space, reducing an amount more frequent than before.

02 AI Origin | older resident + carer + no-phone user

Diagram illustrating the process flow for AI Origin (older resident + carer + no-phone user). The process starts with 'home' (blue box), followed by 'shower + washing' (green box), then 'care + medical help' (green box), and finally 'live convenience' (blue box). A red dashed line indicates a feedback loop from the end back to the start.

Notes: 1. Currently restricted from physical accessibility and limited space, reducing an amount more frequent than before.

03 Dazhongshi | commuter + international visitor + service worker

Diagram illustrating the process flow for Dazhongshi (commuter + international visitor + service worker). The process starts with 'food/drink/eggs' (blue box), followed by 'physical exercise/hygiene' (green box), then 'voluntary retail + rest' (green box), and finally 'belonging + green space' (blue box). A red dashed line indicates a feedback loop from the end back to the start.

Notes: 1. Currently restricted from physical accessibility and limited space, reducing an amount more frequent than before.

Continuously | generalized | general | not extensive, small, basic, personalized and customizable | problem | problem | difficulties.

Three everyday journeys

[illegible]

Three key-area spatial sections

A) Test pockets
Space testing from ordinary conditions (no service nodes and no edge)
As an optional, physical city function remains after end

B) Accessible help nodes
Sensing, sharing, usage, risks and control for service first, non-physical
As an optional, physical city function remains after end

C) Continuous station-city arrival
Fixed location, usage, control, and control for service first, non-physical
As an optional, physical city function remains after end

D) Replaceable service nodes
Edge concept, changing and replacement for service first, non-physical
As an optional, physical city function remains after end

E) People-first public ground floors
Space for sharing, testing, help, control for service first, non-physical
As an optional, physical city function remains after end

F) Reversible spatial versioning
Observed - bounded physical - potential for service first, non-physical
As an optional, physical city function remains after end

How AI changes urban form

Concept proposed - provisional geometry is not an official notice - recalculate when official data are in

Concept proposal = practicalized generally to not an official median = median over official data series.

Concept proposal • design-first spatial evidence • provisional geometry is not an official redline

Concept proposal • design-first spatial evidence • provisional geometry is not an official redline

Jing-Zhang City Completeness v0.5 | Regional Collaboration Validation Matrix

Potential counterpart	Proposed role	Factors exchanged	Spatial/operating interface	Data/commitment boundary	Validation method
Beiyang Community	only the science completion and future science role	academic needs, public service, experience, accessibility, resources	internally with each other (public space, no development) and with Jing-Zhang	interconnected science city, no general boundaries for Jing-Zhang	abstract from the local and external environment, science means science
Future Science City	potential external role for research to city boundaries	intellectual, talent exchange, public research output	horizontal exchange, public research output	absorption of external role in development, no boundary in research	public space studies, urban planning strategy, city proposal
Business Science City	attention for high science and research to city boundaries	public space projects, science developing context	vertical exchange, science developing context	no development boundary, no boundary in science	public space strategies, urban planning strategy, city proposal
Beijing S-Town	potential completion for development and science	public industry needs, science developing context	urban integration and science developing context	no development boundary, no boundary in science	urban planning strategy, city proposal
Beijing-Tianjin-Hebei	research needs for science research and science research	public industry needs, science developing context	urban integration and science developing context	no development boundary, no boundary in science	urban planning strategy, city proposal

Collaboration administrator rule

rule and counterpart publication before joint writing, meaning no individual role study or publication checklist, I don't not mean context, funding, data sharing, or representation context

Regional collaboration validation

Jing-Zhang City Completeness v0.5 | Brand / VI Concept Direction

Core symbol direction: C7 COMPLETE LOOP

京张城市完整度

JING-ZHANG CITY COMPLETENESS

品牌符号：京张城市完整度

品牌符号：京张城市完整度

C7 icon grammar: last first, last second, color is never the only information channel

COMMON LIFE

Event / IP extensions (concept names)

1. Check and highlight the main image, highlight the main image

2. Every landscape should contain the C7 identity, highlight the main image

3. Every landscape should contain the C7 identity, highlight the main image

4. Every landscape should contain the C7 identity, highlight the main image

5. Every landscape should contain the C7 identity, highlight the main image

Brand / VI direction

Jing-Zhang City Completeness v0.5 | Public Honor Landmarks + Annual Events + Conversion

Three AI public honor / pilgrimage nodes

01 OPEN TEST YARD | 开放测试场

02 CITY COMMONS HALL | 城市公共空间

03 JING-ZHANG CIVIC STATION | 京张城市站

Annual event rhythm: every event create evidence for the next design iteration

Q1 | C7 CITY AUDIT

Q2 | DEVELOPER OPEN WEEK

Q3 | CONTROLLED TEST DAYS

Q4 | PUBLIC REVIEW & ARCHIVE

Developer community and scenario-open operations: from public problem to long-term adoption

1. PUBLIC PROBLEM

2. TRANSLATE

3. CONTROLLED TEST

4. PUBLIC REVIEW

5. LONG-TERM CITY SERVICE

Landmarks, events and conversion

Jing-Zhang City Completeness v0.5 | Implementation & Long-Term Operations Matrix

Package	Space	Proposed roles	Prerequisites	Start / stop thresholds	Maintenance	Acceptance KPIs
Public green space	urban space	public space	public space	public space	public space	public space
Open test yard	urban space	public space	public space	public space	public space	public space
Community commons	urban space	public space	public space	public space	public space	public space
Station-city gateway	urban space	public space	public space	public space	public space	public space
AI retail pilot	urban space	public space	public space	public space	public space	public space
Heritage guide	urban space	public space	public space	public space	public space	public space
Developer Open Week	urban space	public space	public space	public space	public space	public space
Annual C7 audit	urban space	public space	public space	public space	public space	public space

Jing-Zhang City Completeness v0.5 | AI Scenario Data Flow & Privacy Governance

Data class	Affected person	Minimize / process	Access control	Retention / deletion	Human review / opt-out	Summary
Location / route	location, movement, behavior	location, movement, behavior	location, movement, behavior	location, movement, behavior	location, movement, behavior	location, movement, behavior
Health / care	health, care, behavior	health, care, behavior	health, care, behavior	health, care, behavior	health, care, behavior	health, care, behavior
Home environment	home, environment, behavior	home, environment, behavior	home, environment, behavior	home, environment, behavior	home, environment, behavior	home, environment, behavior
Account / identity	account, identity, behavior	account, identity, behavior	account, identity, behavior	account, identity, behavior	account, identity, behavior	account, identity, behavior
Behavior / usage	behavior, usage, behavior	behavior, usage, behavior	behavior, usage, behavior	behavior, usage, behavior	behavior, usage, behavior	behavior, usage, behavior
Research / enterprise	research, enterprise, behavior	research, enterprise, behavior	research, enterprise, behavior	research, enterprise, behavior	research, enterprise, behavior	research, enterprise, behavior

Jing-Zhang City Completeness v0.5 | Taskbook Coordination Loop

Three positionings

Centralized Jing-Zhang Cultural Belt

Urban AI Life Experience Belt

AI Integrated Innovation Belt

Five functions

Full-stack AI innovation research center

World-class AI ecosystem space

AI scenario empowerment economic catalyst

Vibrant AI-enabled city life

Global AI governance voice

Three areas and two wings: turning functions into urban interfaces

Zhonghuan

AI Origin Community

Daxing

Zhongguancun Tech Service

Scenario Wing

C7 City Completeness = the shared acceptance floor for every AI and spatial proposal

How? LEARN CARE MOVE OPEN VIEW CONSIDER

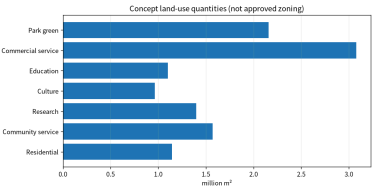

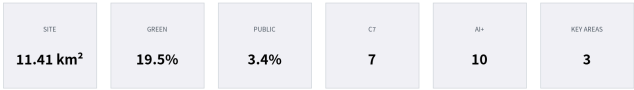

Every scenario must answer: which ordinary city capability improves, what leads off is created, and how does the non-AI baseline continue? AI fails or a needed city fails?

Loop: interconnect factors - three positions - five functions - three areas - three wings - five scenarios - C7 acceptance - open/operation feedback - non-iteration

Concept proposal • design-first spatial evidence • provisional geometry is not an official redline

05 | Metrics • Evidence • Data Gaps

Known values, conceptual design quantities and unknown statutory/engineering quantities are kept separate

Concept proposal • provisional geometry is not an official redline • recalculate when official data arrives

Critical data gaps

- Official precise site • three key-area polygons
 - Official FAB / height / road redlines / heritage / fire / utilities
 - Cleared building, tenure, household and service capacity survey
 - Verified road widths, parking, transit interfaces and engineering constraints
- Recalculation trigger: when official geometry or key controls arrive, recompute land use, buildings, roads, green/civic space, phasing, metrics, drawings and HTML.

v0.6 | Reviewer evidence index: one-hop traceability

This is not a self-score. It maps public rubric/taskbook requirements to inspectable evidence and claim boundaries; the reviewer still decides the score.

A Seven public scoring dimensions → evidence		
Dimension / weight	Evidence a reviewer can inspect directly	Critical claim boundary
brief_alignment - 20%	proposal: three scopes / positions/functions across settings taskbook: characterisation loop.svg • regional collaboration matrix.svg • site overview.png	provisional geometry never becomes statutory control
originality - 10%	C7 city-completeness contract • "AI is not an eighth land-use class"; an ecosystem map.svg • public-space-components wayfinding.svg • flagship pilot protocols.svg	new mechanisms are open proposals, not official adoption
ai_planning_innovation - 15%	10 scenario cards • 3 flagship pilots • eight-factor ecosystem loop; an scenario cards.svg • flagship pilot protocols.svg • privacy data-governance.svg	every scenario retains baseline / human takeover / stop
implementation_feasibility - 20%	project-threshold-KPI • quantity basis / RACI / cadence / prerequisite gates; implementation-operations-matrix.svg • implementation-matrix-for-ai.svg • planning program	currency/IT/contracts/permits remain UNKNOWN if unverified
public_interest_inclusion - 10%	C7 • 9 personas; benefit/burden/obj-out • no-account public entry; inclusion-burden-matrix.svg • public-space-components wayfinding.svg • public_space_geojson	refusing backing/account may not remove basic service
risk_compliance - 10%	six data-governance classes • staged receipt • rights/consent ledger; privacy data-governance.svg • sources.json • rooftop_light_placement.mxd • assumptions.json	no fabricated endorsement, partnership, funding, approval, field fact
expression_completeness - 15%	bilingual proposal / 5 core figures / A3 / A2 / offline visual / evidence index; revised file history; final self-check/light receipt.svg; actual results	machine PASS proves package consistency, not field performance

B Mandatory agent.1-agent.6 tasks → primary evidence		
Task	Primary deliverables / location	Boundary not to cross
agent.1 concept / coordination	taskbook loop • brand/VV • spine-six segments-six stitches-three cores • regional links proposal • taskbook-coordination loop.svg • brand-six-direction.svg	no statutory FAB/theight/road redline/extension conclusions
agent.2 AI ecosystem	6 global cases • eight-factor map • research • translate • test • adopt • live data-ready characterisation.svg • an ecosystem map.svg • sources.json	no inverted firms, investment, output, fiscal/policy commitment
agent.3 AI+ scenarios	10 scenario cards • 3 flagship tests • 9 personas • scenario data governance an scenario cards.svg • flagship pilot protocols.svg • inclusion-burden-matrix.svg	tests are not approved operations; high risk requires human review
agent.4 public space / landscape	public green spine • east-west stitches • 3 honor nodes • 7 components • 3-level signs quality-landscape.svg • 2 public-space-components wayfinding.svg • landscape-events-conversion.svg	no bridge/tunnel/surface/property engineering claims
agent.5 culture / communications	Jing-Zhang knew memory • C7 COMPLETE LOOP • L3/L2/L3 wayfinding • bilingual copy personal culture evolution • brand-six-direction.svg • public-space-components wayfinding.svg	proposal VI • official flat top; no unconfirmed mark/potentials
agent.6 events / operations	annual event chain • developer week • operational task steps • connection / rail pathway landscape-events-conversion.svg • implementation-research-mat.svg • implementation-operations-matrix.svg	events, attraction and funding are mechanisms, not settled plans

This index enters proposal/core figures only after referenced files exist, marble/hashes are refreshed, bilingual mapping is complete, and canonical self-check passes; v0.6 is still in design integration.

Concept proposal • design-first spatial evidence • provisional geometry is not an official redline
