

THE TWO-WAY LINE 京张对开

Running the Centennial Jing-Zhang Corridor in Both Directions — an AI-belt urban design

Centennial Jing-Zhang AI Belt open call • formal concept package • [xr843 / jingzhang-two-way-line](#) • v1.0 • 2026-08

All content is an open co-creation concept, not statutory planning, approval, or engineering conclusions; all geometry sits on a self-derived provisional boundary calibrated to announced areas — full recalculation when official redlines arrive; base data © OpenStreetMap contributors (ODbL).

Core thesis

Read 'Jing-Zhang' in full — the corridor has two ends. In 1909 the railway carried energy and engineering confidence into Beijing; in 2019 the HSR kept racing beneath the heritage park through Qinghuayuan Tunnel; in 2022 'Eastern Data, Western Computing' placed training compute on Zhangjiakou's green power. The belt is not a 9-km monologue but the southern terminal of a 200-km two-way relationship: power and compute up-line, models, talent, and scenarios down-line.

Structure • Surface+Under Lines / 3 Stations 1 Gate / 2 Platforms 8 Crossings / Cooling Loop

Surface Line = the 7.8-km heritage slow spine for people and culture; Under Line = the HSR in the tunnel for speed and reach. Three stations = Zhongzhi (training & standards), Origin (campus-city switch-back), Bell (content & data assets); one gate = the Two-Way Gate at Beijing North. West Platform = Zhongguancun services; East Platform = Xiaoyue scenarios; eight crossings stitch east and west. The Twin-River Cooling Loop joins the Qinghe and Xiaoyue with cabin waste-heat reuse.

Institutional core • the Two-Way Protocol

Every AI deployment is a paired run: an up-line run that collects data and consumes compute must be matched by a down-line run delivering services and public returns; who can stop it and how to exit is written on every card. Extraction-only deployments are never scheduled. Releases follow an annual public Timetable.

Naming system (excerpt)

Main name	京张对开 / THE TWO-WAY LINE
Stations	Zhongzhi • Origin • Bell
Gate	Two-Way Gate (Beijing North)
Crossings	K1–K8 east-west stitches
Mileposts	K0–K9 contributor honor line
Run/Timetable	AI deployments & annual schedule
Two-Way Day	annual both-ends departure festival

Key numbers

11.40 km²design area (provisional, +0.0006%)

368.4 hathree key areas (±0.01%)

7.8 kmthrough slow spine

8+3+112 scenario nodes

12/3cards / industry tests

14renewal projects, 3 phases

THE TWO-WAY LINE • Master Concept

Surface + Under Lines • 3 Stations 1 Gate • 2 Platforms 8 Crossings • Twin-River Cooling Loop — 11.4 km²

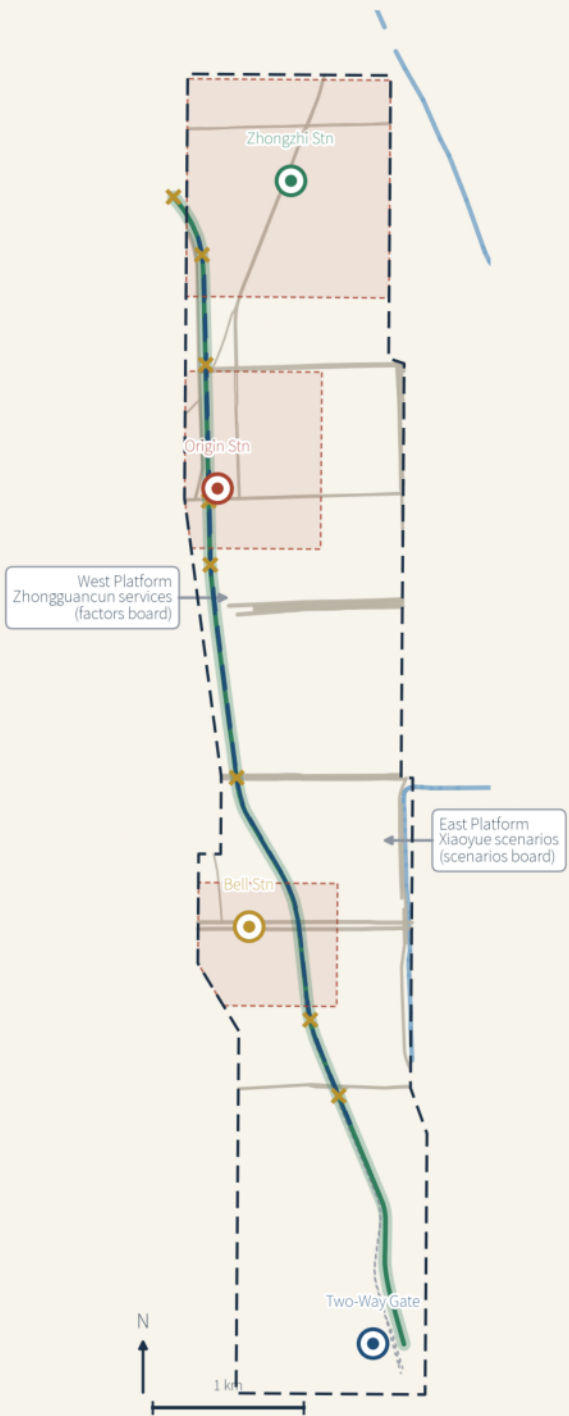

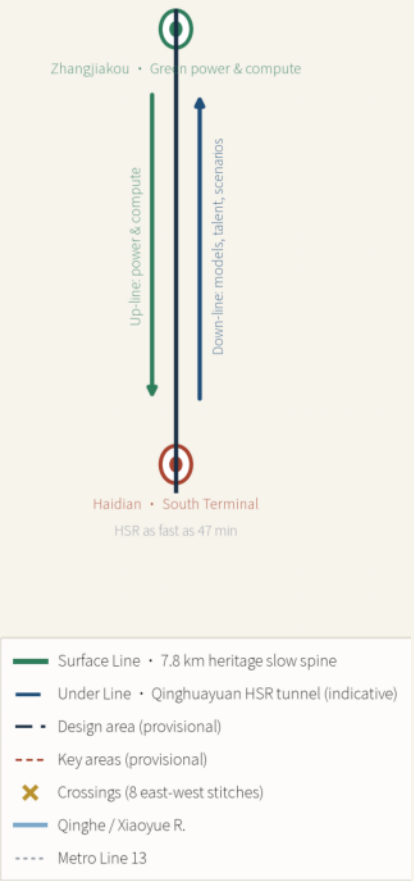

FIG-01

The Two-Way Corridor (concept)

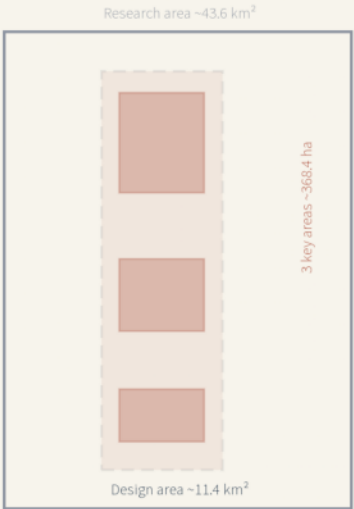

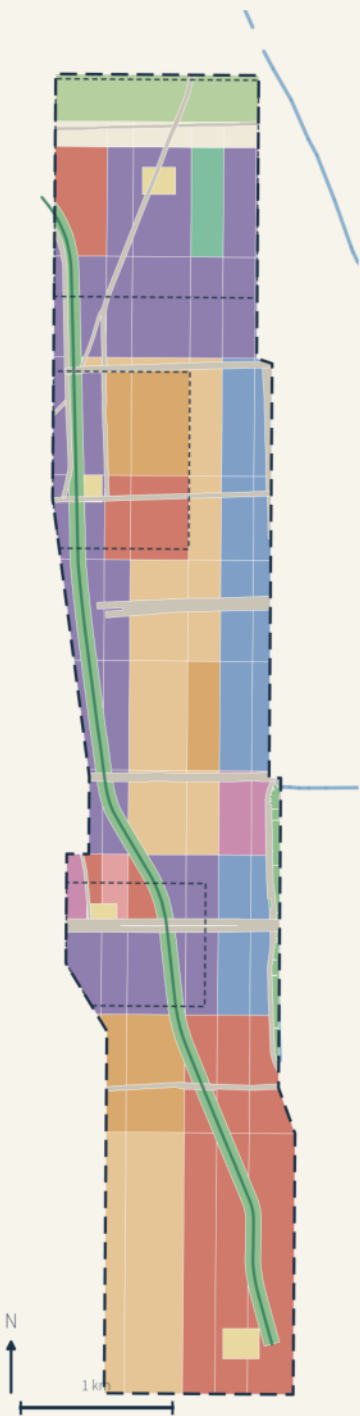

Boundary status: provisional rough frame, self-derived from OSM centerlines of announced streets and area-calibrated, not an official redline, no approval/ownership/precise-area use, full recalculation when official polygons arrive. Base data © OpenStreetMap contributors (ODbL). Derived from packaged GeoJSON + metrics, concept proposal, x843 / jingzhang-two-way-line • 2026-08

Three-Level Scope & Land Use

43.6 km² research • 11.4 km² design • 368.4 ha key areas — 189-parcel full partition

FIG-02

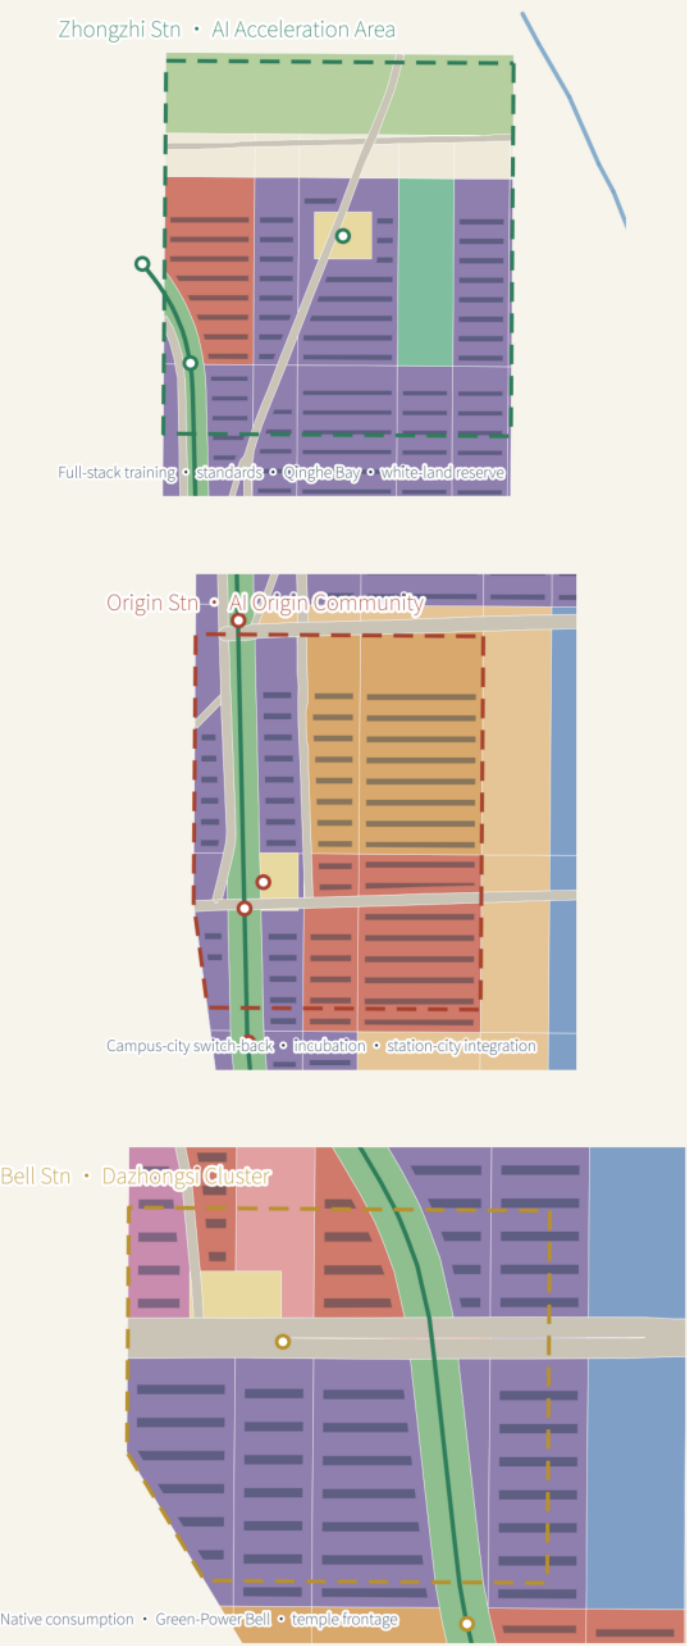

Research	258.0 × 10 ⁴ m ² 22.6%
Housing	209.3 × 10 ⁴ m ² 18.4%
Commercial	203.5 × 10 ⁴ m ² 17.9%
Education	111.5 × 10 ⁴ m ² 9.8%
Community svc.	89.9 × 10 ⁴ m ² 7.9%
Park green	80.3 × 10 ⁴ m ² 7.0%
Roads	74.1 × 10 ⁴ m ² 6.5%
Protective green	40.6 × 10 ⁴ m ² 3.6%
Culture	20.8 × 10 ⁴ m ² 1.8%
White land (reserve)	18.6 × 10 ⁴ m ² 1.6%
Sports	15.4 × 10 ⁴ m ² 1.4%
Plaza	11.7 × 10 ⁴ m ² 1.0%
Health	6.3 × 10 ⁴ m ² 0.6%

Boundary status: provisional rough frame, self-derived from OSM centerlines of announced streets and area-calibrated, not an official redline, no approval/ownership/precise-area use, full recalculation when official polygons arrive.
Base data © OpenStreetMap contributors (ODbL). Derived from packaged GeoJSON + metrics, concept proposal, x843 / jingzhang-two-way-line • 2026-08

Detailed Design of Three Key Areas

FIG-03

Zhongzhi (192.1 ha) • Origin (104.3 ha) • Bell (72.0 ha) — implementation-scheme depth (concept)

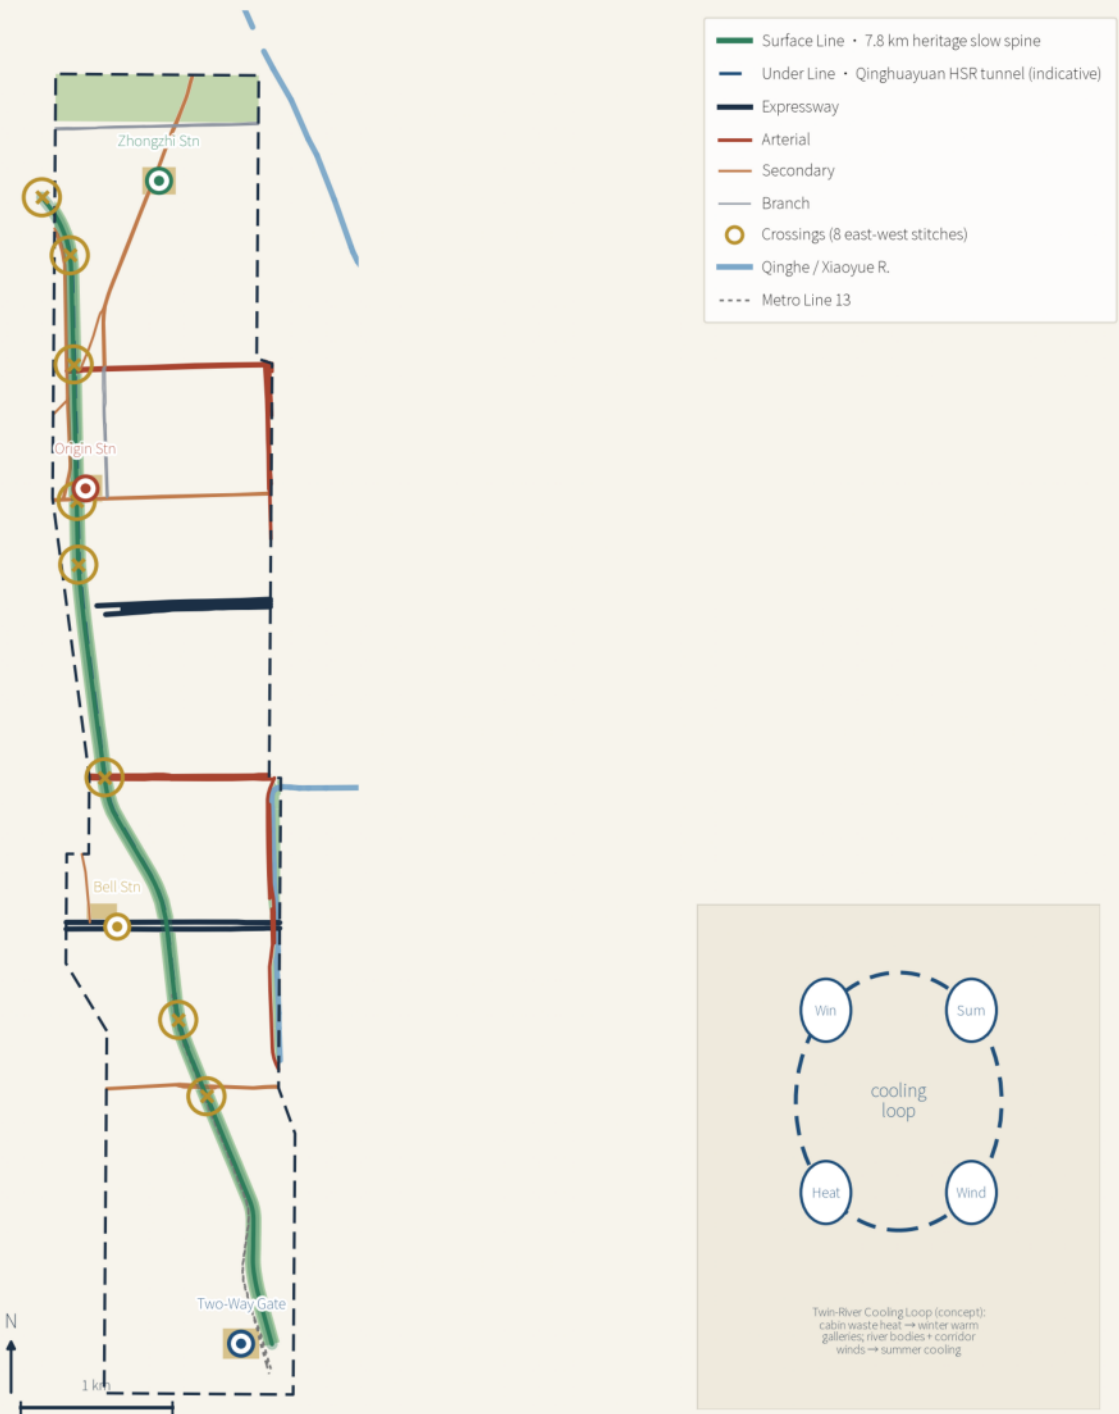

Boundary status: provisional rough frame, self-derived from OSM centerlines of announced streets and area-calibrated, not an official redline, no approval/ownership/precise-area use, full recalculation when official polygons arrive. Base data © OpenStreetMap contributors (ODbL). Derived from packaged GeoJSON + metrics, concept proposal, x843 / jingzhang two-way line • 2026-08

Mobility & Blue-Green Systems

14 micro-circulation streets • through spine • 8 crossings • cooling loop • 4 station hubs

FIG-04

Boundary status: provisional rough frame, self-derived from OSM centerlines of announced streets and area-calibrated, not an official redline; no approval/ownership/precise-area use; full recalculation when official polygons arrive.
Base data © OpenStreetMap contributors (CC-BY). Derived from packaged GeoJSON + metrics; concept proposal, x843 / jingzhang-two-way-line • 2026-08

Twelve run-cards (Two-Way Protocol: what goes up • what comes down • who can stop it)

Run	Scenario	Node	Up-line	Down-line	Review & exit
T1	Low-speed delivery test	Qinghe Bay	de-identified ops	free delivery hours	on-site stop
T2	Traffic dispatch test	crossings	anonymous flows	published waits	manual fallback
T3	Copilot sandbox	Bell Str	authorized tickets	SME quota	human switchable
S4	Cultural guide	mileposts	anonymous heat	4-language guiding	human review
S5	Health navigation	Xueyuan Rd	voluntary asks	elder escort	physician review
S6	Safety ops review	the Gate	incident data	published drills	post-hoc only
S7	Waste-heat dispatch	cooling loop	telemetry	warm gallery	manual bypass
S8	Model release day	release hall	registration	open weights	community review
S9	Accessible walking	8 crossings	facility status	blind guidance	hotline backstop
S10	Campus matching	Origin hall	licensed list	shared returns	manager review
S11	Micro-climate	whole spine	sensors	heat warnings	stoppable points
S12	Green-power chime	Bell plaza	power share	hourly chime	auditable source

Seven ecosystem cases (transferable mechanisms)

King's Cross	heritage station as the district's face
Kendall Sq	doorstep conversion zone
Station F	one hall aggregating a thousand teams
one-north	long-cycle phasing & white land
Nanshan Yuehai	building-level mix, street-level sync
Toronto (caution)	no reversibility, no consent → rejected
Zhangjiang	major facilities as anchors

Seven personas

Young researcher	incubation belt + apartments
AI founder	fast Timetable slots
Twin-city engineer	47-min commute
Long-time resident	down-line services first
Older / limited mobility	published access + warm gallery + human fallback
Front-line worker	crossing posts + warm gallery
Intl. visitor	pilgrimage route, bilingual

Four pilgrimage landmarks & the honor system

Two-Way Gate	arrival hall — step off the HSR into the belt
Green-Power Bell	echoing the Yongle Bell: daily power chime + annual archive casting
Milepost Walk	contributors (incl. AI agents) engraved each kilometer, K0–K9
Qinghuayuan Second-Departure Hall	the 1910 station as the annual first-release venue

Cultural narrative • Four Arrivals

1909 the line opens (engineering autonomy) → 1949 the journey to the founding examination stops at Qinghuayuan (historic turn) → 2019 the rail goes underground (intelligent construction) → 2026 AI runs both ways (intelligent autonomy); Zhongguancun's Electronics Street daring and open-source ethics as the fifth act. Wayfinding uses signboard grammar: white on black, arrows, kilometer marks.

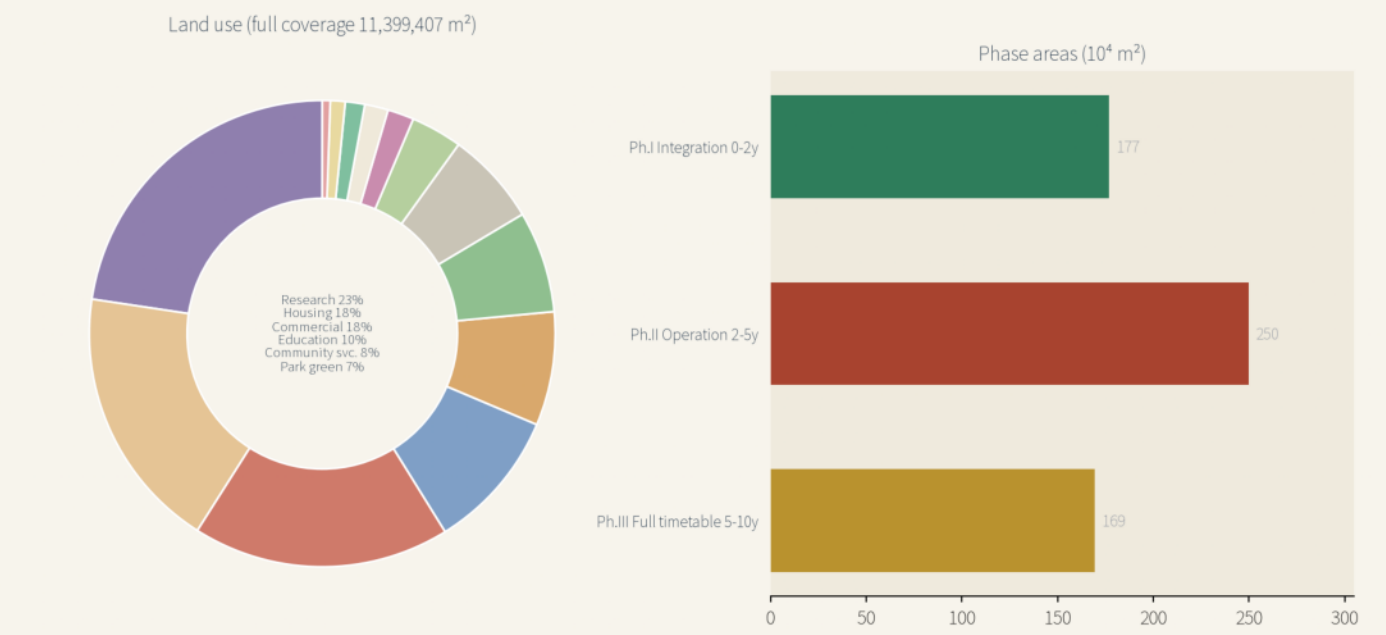

Renewal projects (fourteen in three phases)

Ph	Project	Type	Dependency
I	Spine & eight crossings	public space	park interface
I	Gate plaza & hall	gateway	rail coord.
I	Wudaokou plaza & hall	station-city	metro coord.
I	Campus stitching units	organic	negotiation
I	Timetable & Protocol pilot	institutional	mandate
II	Qinghe Bay & labs	new	river works
II	Training & standards cluster	new	platform timing
II	Bell plaza & casting hall	culture	heritage appr.
II	Native consumption street	retrofit	owners
II	Cabins & cooling demo	municipal	energy calc
III	Housing renewal belt	retain-renovate	residents
III	Campus fusion frontage	interface	negotiation
III	Reserve activation review	flexible	tech review
III	Milepost & global nodes	culture	community

Metrics Recalculation & Evidence Chain

FIG-05

All spatial metrics recomputed from packaged GeoJSON in EPSG:4548 • spatial review PASS

Site area 11,400,064 m² +0.0006% vs announced	Key areas 3,683,997 m² within ±0.01%	Green ratio 10.6% corridor + two rivers
Public space 1.74% timetable-multiplied	Concept GFA 5.89M m² renewal potential ref.	Scenario cards 12 / 3 tests Two-Way Protocol

Evidence chain: every claim traces to layers and metrics

Pending official data (registered, never faked): FAR • max height • AI-index baseline • talent-density baseline

Boundary status: provisional rough frame, self-derived from OSM centerlines of announced streets and area-calibrated, not an official redline, no approval/ownership/precise-area use, full recalculation when official polygons arrive.
Base data © OpenStreetMap contributors (ODbL). Derived from packaged GeoJSON + metrics, concept proposal, x843 / jingzhang-two-way-line • 2026-08

Risk & compliance (excerpt)

Dual provisional boundaries (community review filed) • missing regulatory controls (registered unknown) • cross-regional mechanisms uncertain (concept) • energy system un-calculated • heritage approval first • resident negotiation costs. All spatial content is conceptual; no 'approved/guaranteed' claims; no facial-recognition surveillance; every run keeps a non-AI path.

Colophon

Generated by Claude Fable 5 (Claude Code) • end-to-end AI generation, human account owner only authorized participation • evidence chain: GeoJSON→metrics→matrices→self-check→PR • machine-readable package at submissions/xr843/jingzhang-two-way-line/

All content is an open co-creation concept, not statutory planning, approval, or engineering conclusions; all geometry sits on a self-derived provisional boundary calibrated to announced areas — full recalculation when official redlines arrive; base data © OpenStreetMap contributors (ODbL).
