

AI Along Jing-Zhang | Love Along Jing-Zhang

Centennial Jing-Zhang Global Urban AI Full-Chain Open Innovation and Public Co-Creation
Demonstration Belt AI All Along the Way | One Railway, Two Departures

AI is present; care has standards. Urban AI enters public life only when it is visible, explainable, useful, stoppable, and changeable.

00 AI Is Present; Care Has Standards

Five public conditions for understandable and auditable urban AI

Fig. 0 | Five questions are the public test; G0–G4 govern the project life cycle. Any failed question downgrades the service.

43.6 km² addresses regional capability, 11.4 km² the overall spatial system, and 368.4 ha the public interfaces of the Key Areas.

01A Three Scales, Three Design Responsibilities

43.6 km², 11.4 km², and 368.4 ha require different evidence

Fig. 1A | Official textual areas define task scale; provisional geometry supports concept organisation and low-confidence recalculation only.

Three Zones as a Chain, Two Wings as a Loop, Jing-Zhang integrated with the city; all mapped boundaries remain provisional.

01

Site, Evidence, and Overall Concept

Three Zones as a chain · Two Wings as a loop · Jing-Zhang integrated with the city

Three scales, three outputs

43.6 km² Coordinated Research | ecosystem, regional links, future-city strategy
11.4 km² Overall Design | renewal, land use, mobility, utilities, blue-green systems
368.4 ha Key Areas | detailed design for three areas; polygons pending

One operating loop

Problem intake → AI Origin translation → Zhongzhiyuan validation → Dazhongsu adoption → public feedback → continue, modify, or retire. The Technology Services Wing supports every stage.

Public right to participate and exit

The Jing-Zhang heritage park is the public interface. The first 1:1 prototype sits outside Qinghuayuan; 12 scenarios retain human routes and undergo 72 synthetic rule checks.

Fig. 1 | Real-world context with conceptual overlay. Basemap: © OpenStreetMap contributors.
Provisional geometry is not an official boundary, road redline, or area basis.

Problems move through AI Origin translation, Zhongzhiyuan validation, Dazhongsi adoption, and public feedback.

02 Overall Spatial Structure: One Question Across the Belt

Land-use coverage 1.0 | three stitches | two supporting wings | first prototype at the conceptual Qinghuayuan exterior node

01 Zhongzhiyuan | TRUST

Research → trusted validation → AI governance

02 AI Origin | EXPLAIN

Public questions → translation → co-creation

03 Dazhongsi | USE

Controlled experience → adoption → urban service

FIRST 100 DAYS | ONE 1:1 PROTOTYPE

D1-30

Survey + non-AI baseline

D31-60

Mock-up + 72 rehearsals

D61-76

Authorised opening + deliberate stop

D77-100

Independent retest + keep/change/remove

Fig. 2 | OSM supports orientation only; land use, links, and nodes are concepts, not statutory planning or engineering alignments.

The three areas answer trust, explanation, and everyday adoption; locations require formal-map calibration.

03 Three Key Areas: Real-World Orientation and Distinct Tasks

Each area combines a spatial sequence, three operating states, and restoration duty; AI Origin begins with the Qinghuayuan exterior 1:1 prototype

01 Zhongzhiyuan Can it be trusted?

Observation | controlled core | human takeover | restoration

STOP | Stop on failed emergency control, breach, or absent owner

NEXT | Planning controls, engineering conditions, and operator pending

02 AI Origin Can it be explained?

Quiet heritage edge | paper + staffed questions | co-creation | return

STOP | Remove on heritage, quiet-hour, or personal-data impact

NEXT | Heritage lines, ownership, and real location pending

03 Dazhongsi Can it enter daily life?

Arrival | ordinary service | timed experience | customer recovery

STOP | Stop experience if capacity, staff, or refunds fail

NEXT | Area location, road redlines, and visitor permission pending

Fig. 3 | Basemap supports real-world orientation only. Coloured polygons are provisional, not official boundaries. © OpenStreetMap contributors.

Four-part sections implement daily use, testing, stopping, restoration, and exit.

03A Three Public Interfaces: Daily, Testing, Restoration

Roles differ through sections, stop actions, and restoration duties

Zhongzhiyuan | trusted validation

Public observation	Controlled test core	Human takeover	Ecological restoration	DAILY Movement + staffed explanation	TEST Booked viewing + enclosure + physical stop	RESET Inventory data/equipment + reset
--------------------	----------------------	----------------	------------------------	---	--	---

AI Origin | explanation and co-creation

Quiet heritage edge	City Question counter	Staffed co-creation	Neighbourhood return	DAILY Heritage visit + daily life	TEST Reversible questions + small co-creation	RESET Remove devices + publish destination
---------------------	-----------------------	---------------------	----------------------	--------------------------------------	--	---

Dazhongsi | everyday adoption

Ordinary arrival	Staffed multilingual service	Timed product experience	Customer recovery and reset	DAILY Movement + commerce + urban service	TEST Disclosed experience + open-day validation	RESET Stop entry + refund + remove
------------------	------------------------------	--------------------------	-----------------------------	--	--	---------------------------------------

Fig. 3A | Testing is a temporary overlay on daily space; every test must stop, withdraw, and restore ordinary service.

A five-part exterior sequence supports intake, human handover, public receipt, deliberate stop, and restoration; it is not authorised or field-run.

06

Qinghuayuan City Question Station 1:1 Exterior Prototype

Low intervention inside | reversible outside | same task without AI | not authorised and not field-run

EIGHT CONDITIONS BEFORE FIELD REVIEW

Official heritage-control map | property consent | measured survey | heritage impact | fire and crowd | accessibility | operating owner | restoration fund

Fig. 6 | The concept sequence gives no construction dimensions; fixing, excavation, utilities, lighting, and events require separate review.

Eight personas, twelve scenarios, and three validation types; each card shows task, human route, and stop condition.

06

Twelve Scenarios: Task, Human Route, Stop Condition

Each card makes a distinct operating judgment

01 City questions TASK Ask and track a question HUMAN Paper card + staffed intake STOP Remove on heritage impact	02 Multilingual service TASK Reach the correct service HUMAN Bilingual staff + paper guide STOP Withdraw after repeated errors	03 Accessible navigation TASK Reach the same destination HUMAN Tactile map + guided help STOP Stop on field mismatch	04 AI learning TASK Complete a public course HUMAN Teacher + on-site support STOP Complaints trigger review
05 Health navigation TASK Find an appropriate resource HUMAN Telephone + paper directory STOP Stop if it replaces diagnosis	06 Heritage guide TASK Receive verifiable history HUMAN Fixed labels + human guide STOP Withdraw until facts are fixed	07 International open day TASK Enter a real venue HUMAN Staffed reception + normal route STOP Stop entry at capacity	08 Enterprise compliance TASK Reach professional advice HUMAN Licensed interview STOP No conclusion without expert
09 Trusted models TASK Reproduce safety and bias tests HUMAN Human baseline + independent retest STOP Major risk blocks progression	10 Robot testing TASK Validate low-speed physical safety HUMAN Safety staff + manual handling STOP Terminate on breach or stop failure	11 Smart commerce TASK Complete voluntary trial and refund HUMAN Human support + ordinary shopping STOP Exit on complaint or refund failure	12 Blue-green citizen science TASK Observe heat, rain, biodiversity HUMAN Human observation + expert retest STOP Remove on drift or disturbance

Red public participation Blue service referral Gold industry validation Green ecological feedback

12 / 12 SAME-TASK EQUIVALENCE A person who declines AI, withholds non-essential data, or lacks a smart device still completes the same basic task; if the human route fails, the AI route pauses.

Fig. 6 | Red public participation, blue service referral, gold industry validation, green ecological feedback; validation types use separate protocols.

Everyday movement comes first; the spine links three stitches and Xiaoyue River supports ecological and public retesting.

04 Walking, Blue-Green, and Public Participation Network

Protect everyday movement before adding events, testing, and ecological feedback

DAILY Continuous commute, accessibility, quiet periods

EVENT Timed booking, capacity, non-participant bypass

RESET Remove devices/data; restore route/ecology

Weekdays

Study, work, and community services
Jing-Zhang spine as a green shortcut

Weekends

Heritage and technology experience
Bookable open days and co-creation

Blue-green feedback

Heat, rainwater, and biodiversity observation
Human validation; no watercourse or tree alteration

Safety gates

Capacity threshold | physical stop
Human takeover | quiet periods

Fig. 4 | Basemap: © OpenStreetMap contributors. All movement, event, and ecological actions require field survey and professional review.

The first 100 days and longer phasing follow G0 to G4; dates organise sequence only.

07 Renewal Actions, Phasing, and Five Evidence Gates

Dates organise work only; G0 to G4 determine whether work may advance

Near term 2026-2028

Surveys and governance protocols

Boundaries, buildings, flows, accessibility, ecology, facilities; reversible wayfinding, open days, and small scenarios

Medium term - north

Research validation and blue-green links

Trusted validation, three stitches, AI Origin translation network, and Xiaoyue River citizen science

Medium-long term - south

Adoption, services, and international presentation

Dazhongsi location calibration, controlled commerce, multilingual service, and international events

Five operating evidence gates

G0 Visible

Place, users, current practice, and source

G1 Explainable

Non-AI baseline, data ceiling, permission, owner, restoration funding

G2 Useful

Safety, same-task route, capacity, notice, appeal, end date

G3 Stoppable

Failures, human takeover, public review, site restoration

G4 Changeable

Retest, continuing budget, renewed owner, source validity, public statement

Pause condition

Pause on boundary or heritage conflict, missing owner or restoration funding, failed human takeover, unavailable same-task route, expired critical evidence, or ecological disturbance.

Each of twelve scenarios runs one qualified and five negative cases; 72/72 match expectations without proving field performance.

05 Metrics, Evidence, and Release Logic

Spatial metrics are reproducible | Operating rules are auditable | Unknowns remain unknown

43.6 km² Announced Coordinated Research Area official text	11.4 km² Announced Overall Design Area official text	368.4 ha Announced total of three Key Areas official text
72 / 72 Synthetic rule checks matched expectations 12 qualified + 60 blocked	12 / 12 Scenarios retain same-task human routes public-rights gate	1 : 1 Qinghuayuan exterior public prototype not authorised / not field-run
100 days Eight-step first action package calendar ≠ evidence gate	G0-G4 Five operating evidence gates release control	3 / 5 Zone prototypes / public questions spatial + governance

Data boundary

Remain unknown: total floor area, FAR, road area, building height, and statutory green ratio

Formal prose uses Jing-Zhang; the confirmed brand lockup retains AI ALONG JINGZHANG.

B **Logo and Core Guidelines**

Do not redraw the core symbol | Formal prose uses Jing-Zhang | Brand lockup retains AI ALONG JINGZHANG

AI在京张
爱在京张

AI ALONG JINGZHANG

Ink

Jing-Zhang Red

Blue-Green

Transparent

For documents, figures, and digital interfaces

Reversed

Only on dark backgrounds with clear space

Do not

Stretch, outline, recolour, or merge with metro line symbols

Monochrome

For material limits, embossing, or low-cost wayfinding

Minimum size

Mark ≥24px digitally; full lockup ≥180px

Spatial, heritage, data, readable responsibility, transport, infrastructure, ecology, and evidence risks have pause conditions.

07 Renewal Actions, Phasing, and Five Evidence Gates

Dates organise work only; G0 to G4 determine whether work may advance

Near term 2026-2028

Surveys and governance protocols

Boundaries, buildings, flows, accessibility, ecology, facilities; reversible wayfinding, open days, and small scenarios

Medium term - north

Research validation and blue-green links

Trusted validation, three stitches, AI Origin translation network, and Xiaoyue River citizen science

Medium-long term - south

Adoption, services, and international presentation

Dazhongsi location calibration, controlled commerce, multilingual service, and international events

Five operating evidence gates

G0 Visible

Place, users, current practice, and source

G1 Explainable

Non-AI baseline, data ceiling, permission, owner, restoration funding

G2 Useful

Safety, same-task route, capacity, notice, appeal, end date
