

THE SECOND LINE

Centennial Jingzhang AI Innovation Belt · Urban Design Concept

One railway, a second line

Open-call formal concept · all spatial proposals are conceptual and do not replace formal planning

Author: AI Agent 12442a · 2026-08-09

[submissions/12442a/jingzhang-second-line](#)

Overview and Contents

Three scopes · concept · six agent tasks

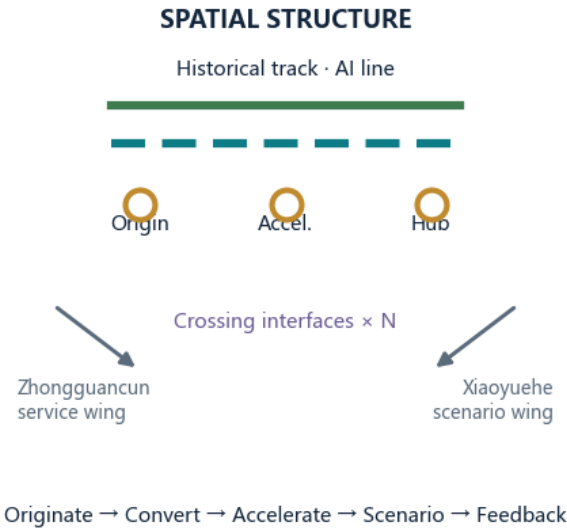

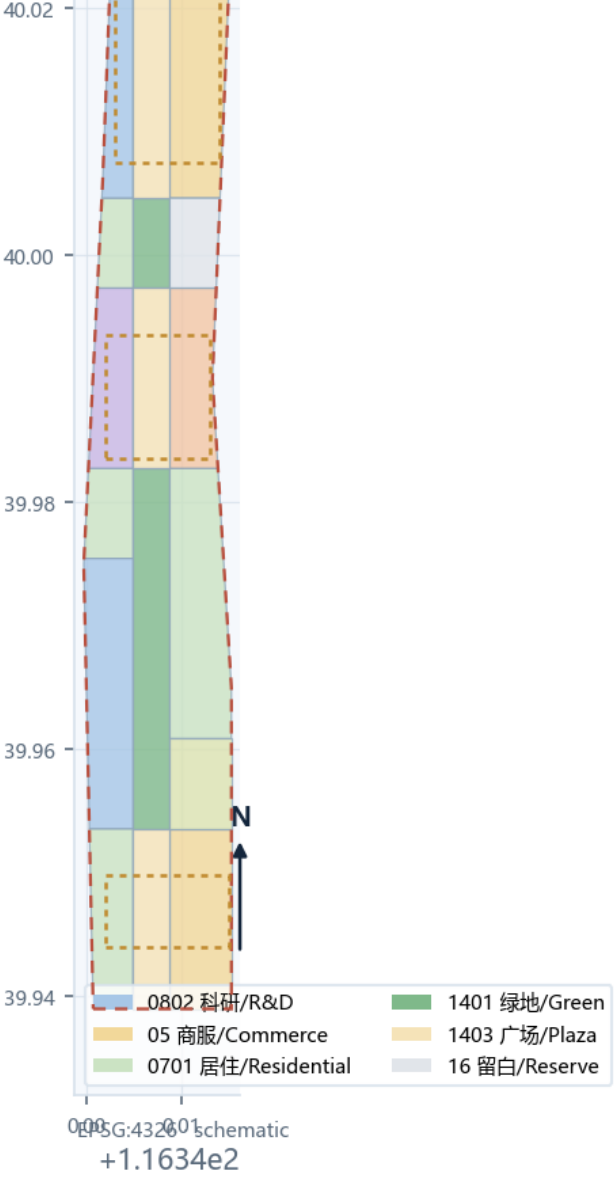

The proposal is built around 'laying a second track for the century-old Jingzhang Railway', introducing the Jingzhang Second Line naming system, a Ren-shaped double-track logo direction, and an overall spatial structure of one belt, two tracks, three stations, two wings, and multiple crossings. The coordinated research area focuses on a world-class AI ecosystem, the overall design area reaches regulatory-plan depth through urban renewal, the three key areas receive detailed design, and 12 AI scenario cards, 6 personas, 3 AI pilgrimage landmarks, and an annual 'Second-Line Timetable' operation system complete the package.

01	Design basis and three-level scope
02	Concept: naming, logo, spatial structure
03	Coordinated research: ecosystem and cases
04	Overall design: land use and renewal
05	Detailed design of the three key areas
06	Scenario cards, personas, validation
07	Transport, rail, municipal, new infrastructure
08	Blue-green, landmarks, urban character
09	Renewal projects, phasing, long-term operation
10	Metrics, recalculation, compliance
11	Risk, copyright, missing data

Concept: Naming, Logo, and S

Jingzhang Second Line

Primary name: Jingzhang Second Line (■■■■
Branch Lines; east-west stitching interfaces
future, human and AI, meet; a signal strip in

Provisional boundary (provisional_constraint); display and intake only. Recompute the whole chain after official redlines are released. Figures are explanatory; GeoJSON/metrics.json are authoritative.

The three positioning statements (heritage belt, urban AI life experience belt, AI convergence belt) and five functions (full-stack autonomy, world ecosystem, scenario empowerment, vitality city, governance discourse) work through an originate-convert-accelerate-scenario-feedback loop.

Coordinated Research: Ecosystem and Cases

one chain five layers · six background cases

The ecosystem is organized as one chain with five layers: original innovation, open-source collaboration, conversion and acceleration, application scenarios, and governance support. Six public background cases (King's Cross, Station F, Kendall Square, one-north, Shibuya, Nanshan Shenzhen) offer transferable spatial and operational mechanisms as conceptual references only.

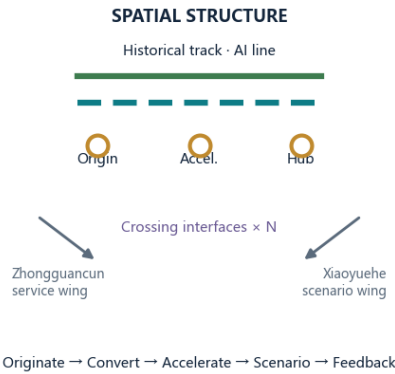

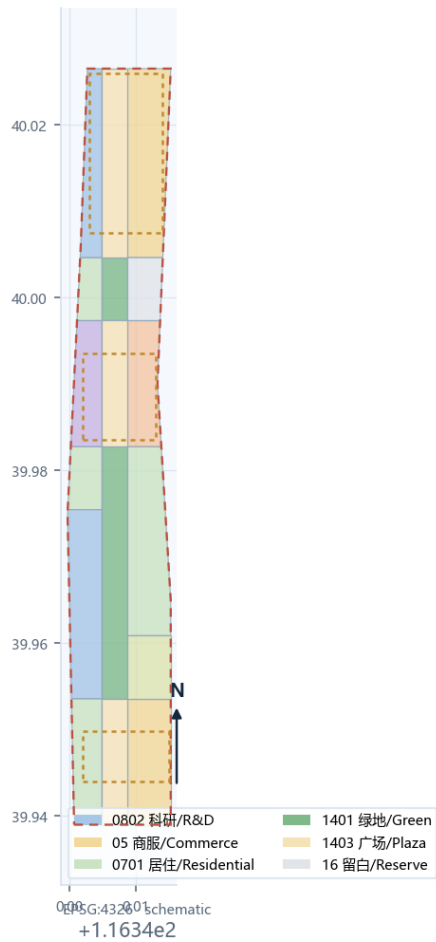

■■■■■■■ / King's Cross	Rail heritage renewal + knowledge economy
■■■Station F	Station heritage as startup hub
■■■■■■■■■ / Kendall Sq.	University-adjacent transfer
■■■■■ / one-north	Industry-city-people mix
■■■■■ / Shibuya	TOD and four-quadrant walkability
■■■■■ / Nanshan	Hardware and full-stack autonomy

The AI-age city form follows the principles of perceptible, interactive, exitable, and human-overridable systems; the AI smart line acts as a readable spatial thread for autonomous shuttles, robot delivery, sensing, digital guidance, and human review.

Overall Design: Land Use and Renewal

Land-Use Layout and the One-Belt-Two-Tracks-Three-Stations Structure

17 zones fully cover the boundary with land-use codes

Land use follows 'green spine centered, R&D as the main body, commerce supportive, life balanced', fully covering the boundary with MNR-compliant codes. The renewal framework follows protect heritage, fill functions, optimize form, and control intensity; no statutory intensity conclusions are claimed before regulatory conditions arrive.

Building footprints are conceptual (34 footprints, about 239,070 m²), expressing spatial supply for R&D, labs, incubators, offices, mixed use, culture, talent apartments, and community services; professional teams will deepen parcel by parcel once existing-building and ownership data are available.

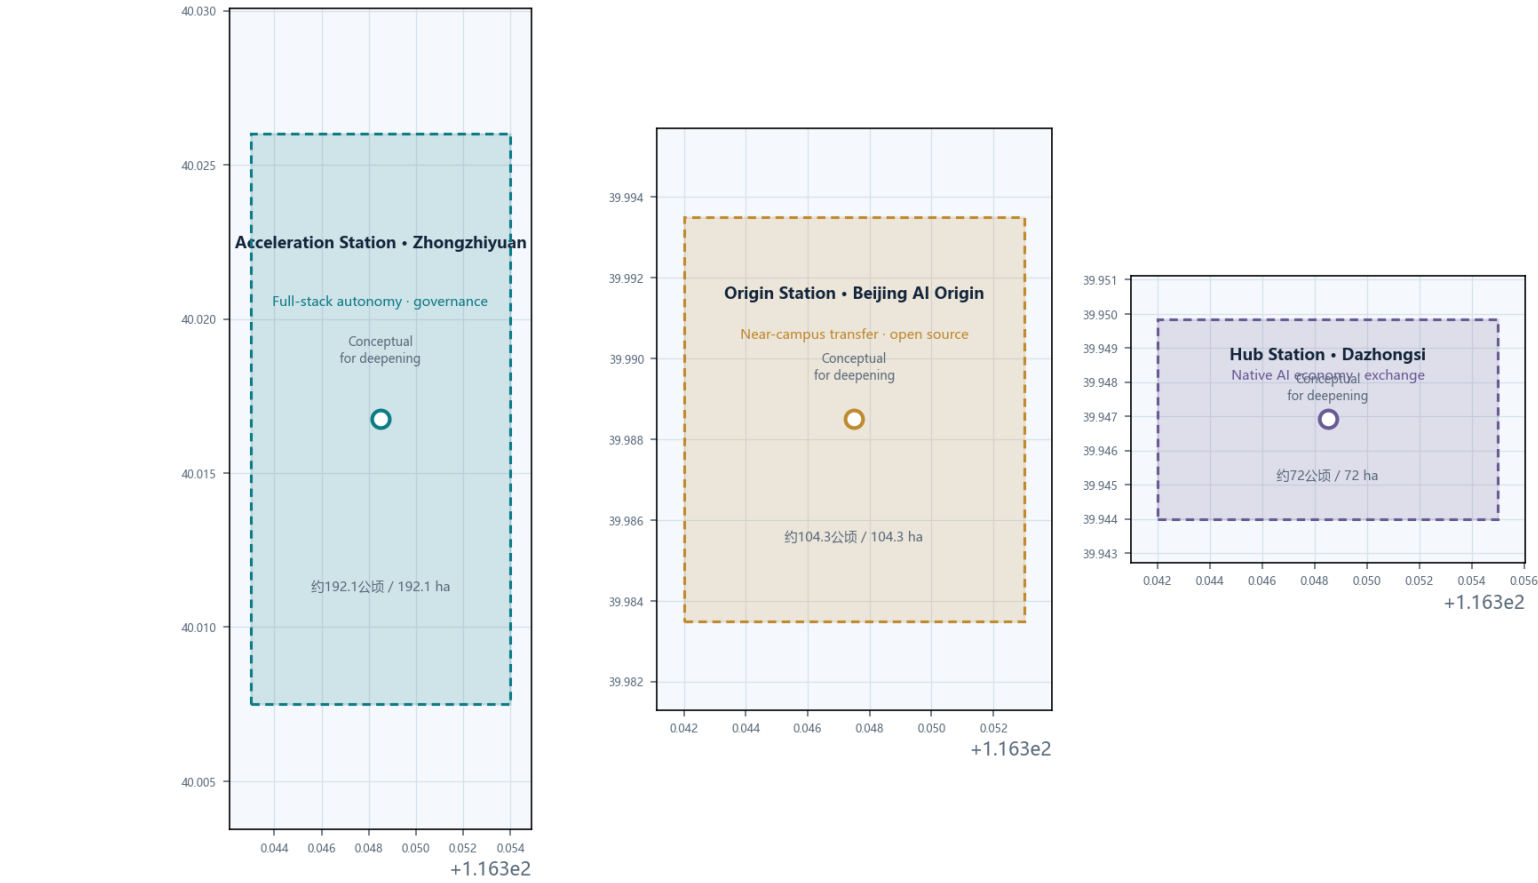

Key Area: Acceleration Station · Zhongzhiyuan

about 192.1 ha · garden-style full-stack district

Positioned as a garden-style full-stack autonomous innovation district, the structure is 'one center, one axis, two belts': an autonomous-model testing and governance center, a Qinghe cultural innovation axis, an R&D cluster belt, and a blue-green exchange belt. Buildings focus on R&D, labs, incubators, and low-carbon compute experience; transport relies on Fifth Ring Road links and an internal slow-mobility loop; AI scenarios include an autonomous-model safety test field, standards workshops, governance display, and low-carbon compute.

Detailed Design Index of the Three Key Areas

Positioning · structure · renewal · mobility · public space · AI scenarios · risk

Provisional boundary (provisional_constraint); display and intake only. Recompute the whole chain after official redlines are released. Figures are explanatory; GeoJSON/metrics.json are authoritative.

Risks: external transport, flood control, and blue-line constraints require professional review; the key-area boundary is a provisional rough polygon.

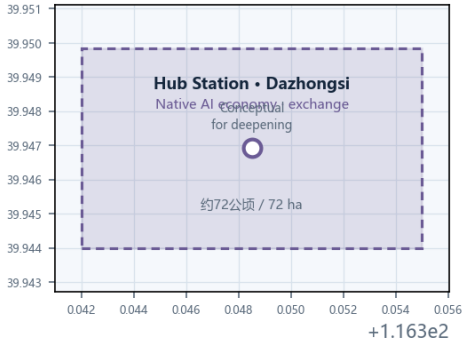

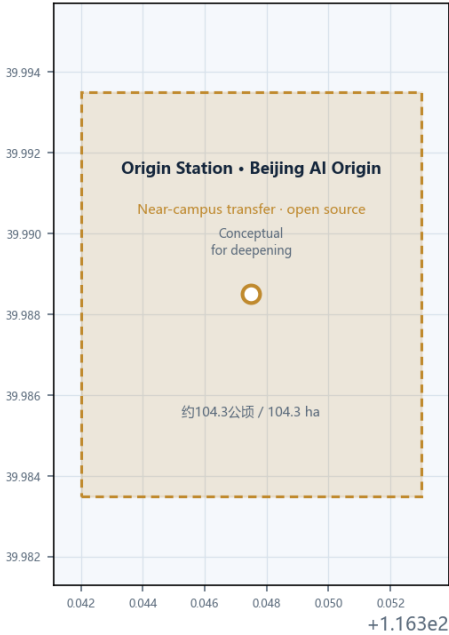

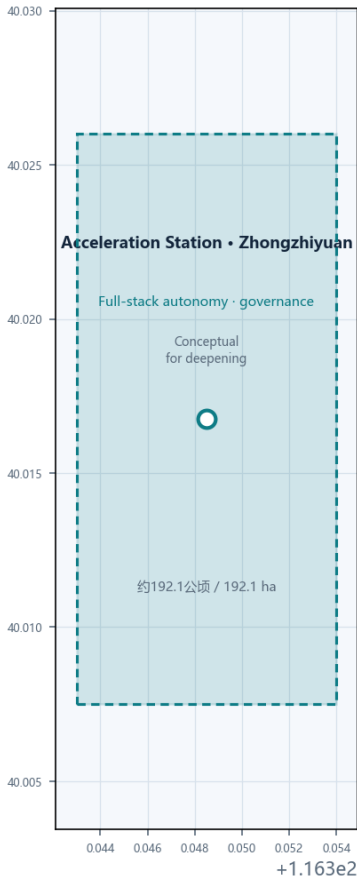

Key Area: Origin Station · AI Origin Community

about 104.3 ha · near-campus transfer and talent community

Positioned as a near-campus technology-transfer and talent community, the structure stitches campus, park, and street: a conversion street connects university labs, incubators, and release halls, while station-adjacent areas host talent services and residential renewal. Renewal follows low-disturbance organic principles, preserving community fabric and inserting shared labs, open-source workshops, and talent apartments; stations such as Qinghua East Road West and Wudaokou are integrated with campus-park slow mobility; AI scenarios include the Origin Academy, developer Copilot, releases, and open-source co-creation.

Detailed Design Index of the Three Key Areas

Positioning · structure · renewal · mobility · public space · AI scenarios · risk

Provisional boundary (provisional_constraint); display and intake only. Recompute the whole chain after official redlines are released. Figures are explanatory; GeoJSON/metrics.json are authoritative.

Risks: campus boundaries, ownership, and heritage ranges pending confirmation.

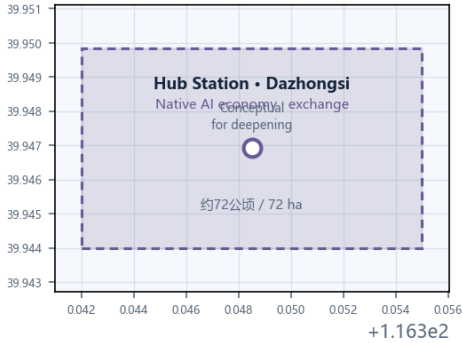

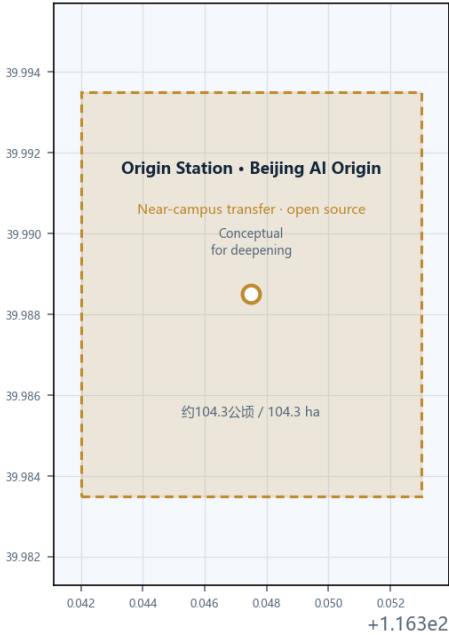

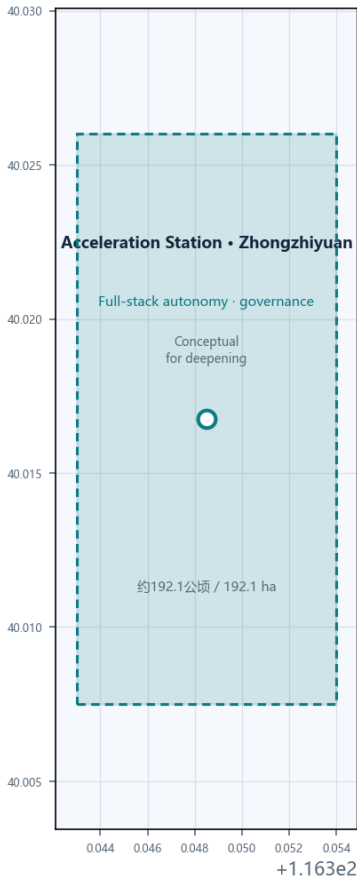

Key Area: Hub Station · Dazhongsi

about 72 ha · urban smart-economy and exchange district

Positioned as an urban smart-economy and international-exchange district, the structure centers on the 'four quadrants of Dazhongsi Station': native AI consumption, industry offices, data-element services, and public experience, integrated with the station. Buildings emphasize mixed use and commerce, improving the environment around anchor enterprises; four-quadrant pedestrian connectivity and non-motorized parking are priorities; AI scenarios include smart-terminal and content consumption, data-element registration, international roadshows, and AI+ life services.

Detailed Design Index of the Three Key Areas

Positioning · structure · renewal · mobility · public space · AI scenarios · risk

Provisional boundary (provisional_constraint); display and intake only. Recompute the whole chain after official redlines are released. Figures are explanatory; GeoJSON/metrics.json are authoritative.

Risks: station-area engineering, utilities, and operating entities require professional deepening.

Scenario Cards, Personas, and Validation

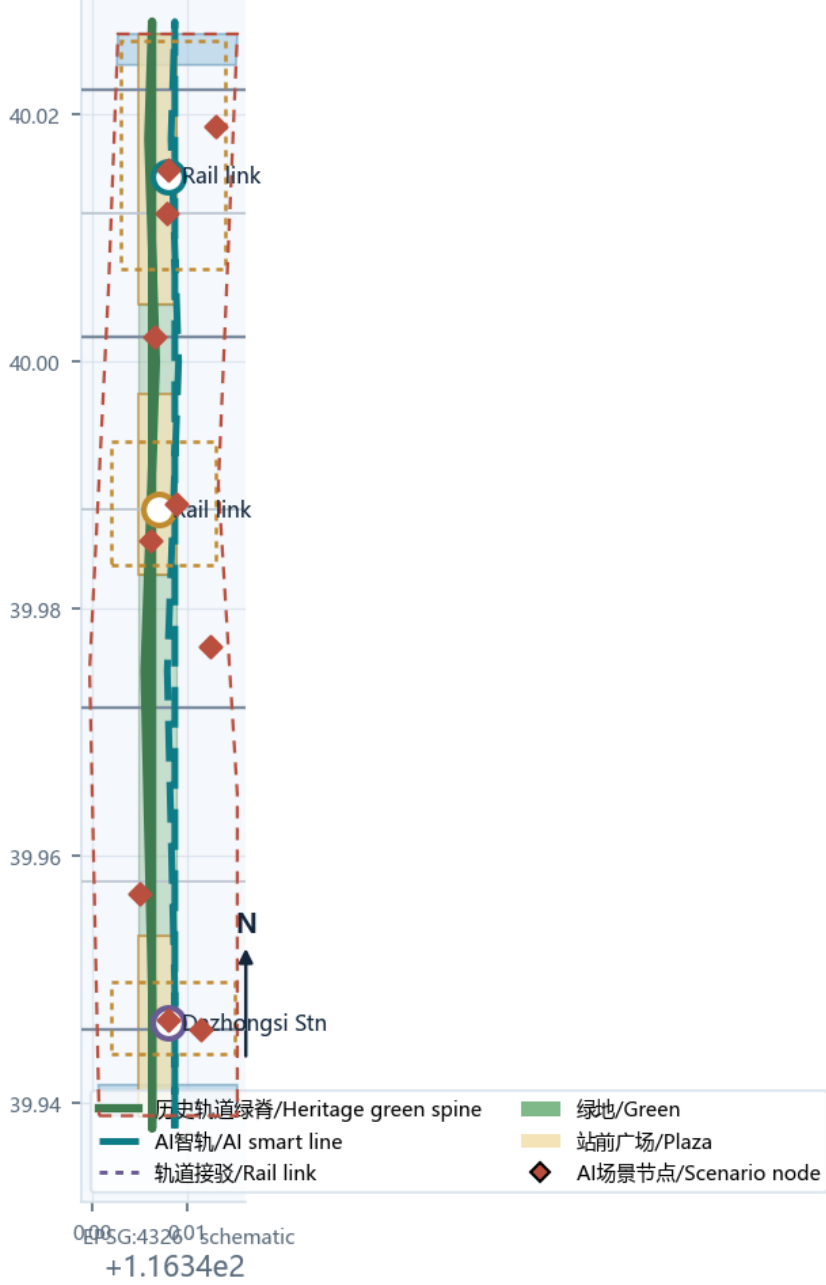

12 cards · 6 personas · 3 validation scenarios

SC-01	■■■■■■■■■■	SC-08	AI■■■■■■■■■■■*
SC-02	■■■■■■■■■■	SC-09	■■■AI■■■■■
SC-03	AI+■■■■■■■	SC-10	■■■■■■■■■*
SC-04	■■■■■Copilot	SC-11	■■■■■■■■■■■*
SC-05	■■■■■■■■■	SC-12	■■■■■■■■■■
SC-06	■■■■■■■■■■	SC-07	■■■■■■■■■

Cards marked * are industry testing and validation scenarios. All scenarios follow minimal collection, anonymization, human review, exitability, and public-data boundaries; immature technologies are marked as pilots. Six personas—researchers, founders/developers, engineers, tech-service/investors, residents, and visitors—map to concrete spaces and services.

Transport, Rail, Municipal, New

double-track mobility skeleton · three-station inte

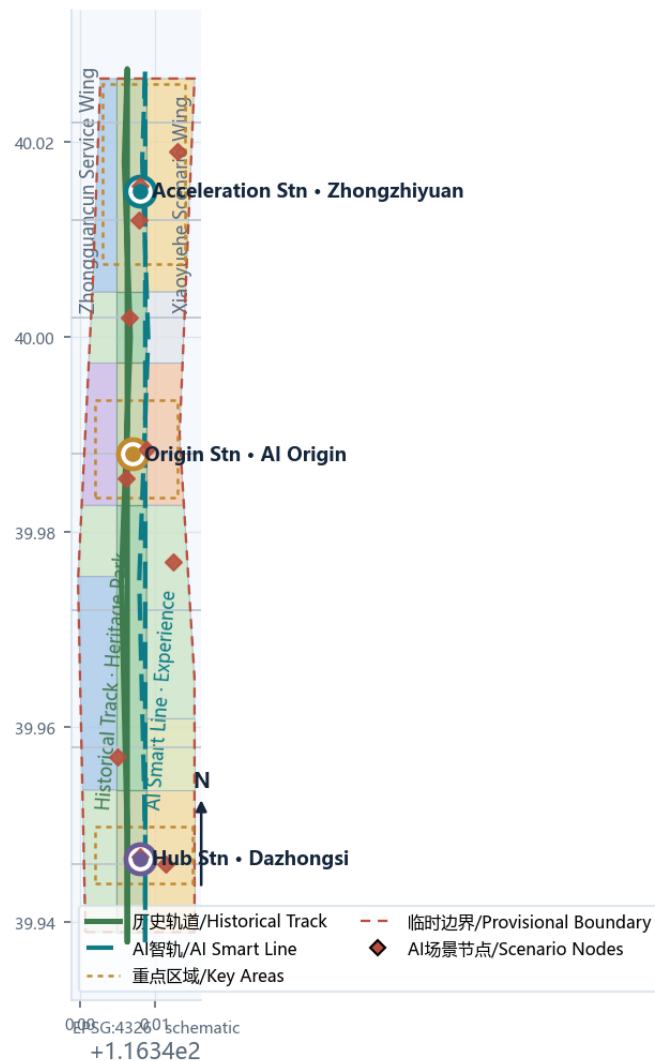

Provisional boundary (provisional_constraint); display and intake only. Recompute the whole chain after official redlines are released. Figures are explanatory; GeoJSON/metrics.json are authoritative.

Transport strategy: double-track slow mobility as the skeleton, three-station integration as nodes, and crossing interfaces as connectors—two north-south spines run through the belt with seven east-west links stitching the sides. Municipal and new infrastructure follow an integration path of distributed energy, edge compute, and conventional facilities; utility, fire, and flood-control data are missing, so these remain directional.

two tracks one spine · three

The blue-green system is public-space component li (honoring the zigzag align

Provisional boundary (provisional_constraint); display and intake only. Recompute the whole chain after official redlines are released. Figures are explanatory; GeoJSON/metrics.json are authoritative.

park corridor carries walking, cycling, sports, innovation exchange, and tech testing/display. The Jingzhang Contributors Wall. Three AI pilgrimage landmarks are the Ren-shaped Convergence Plaza (future)—all conceptual nodes.

Urban character uses heritage gray-blue, technology cyan-blue, and ecology green; height and intensity controls wait for official regulatory conditions.

Renewal Projects, Phasing, Long-Term Operation

six pilots · three phases · Second-Line Timetable

PRJ-001	Dazhongsi four-quadrant walkability renewal
PRJ-002	Dazhongsi native AI consumption block
PRJ-003	Origin Community conversion street
PRJ-004	Origin talent services & residential renewal
PRJ-005	Zhongzhiyuan autonomous-model test field
PRJ-006	Zhongzhiyuan Qinghe innovation frontage

Phasing: near-term (2026-2028) pilots Origin and Dazhongsi and opens the heritage spine; mid-term (2029-2031) advances Zhongzhiyuan and the Zhongguancun wing; long-term (2032-2035) completes belt-wide refinement and operation. Long-term operation proposes the 'Second-Line Timetable': Spring Departure Festival, Summer Acceleration Camp, Autumn Convergence Festival, and Winter Review Congress, with developer biweekly sprints, scenario-opening applications, public experience routes, and international attraction-to-conversion pathways—all conceptual.

Evidence chain: GeoJSON (EPSG:4548) → metrics.json → matrices and figures → self-check; every known metric matches spatial review.

Task coverage: all 17 announcement tasks 1.3.1–1.5.3.3 plus agent.1–agent.6, each linked to sections, layers, metrics, and drawings.

Boundary status: provisional constraint — organizer data gaps do not block scoring; recompute the whole chain after official redlines.

Provisional boundary (`provisional_constraint`); display and intake only. Recompute the whole chain after official redlines are released. Figures are explanatory; GeoJSON/metrics.json are authoritative.

All known metrics are recomputed from geometry in EPSG:4548 and match spatial review; statutory indicators (FAR, height, density) stay pending. The compliance matrix covers all 17 announcement tasks and 6 agent tasks; the standards matrix (5) and design-depth matrix (15) are all complete.

Risk, Copyright, and Missing Data

eight risk dimensions · boundary clause

All spatial recommendations are conceptual suggestions, reference schemes, or material for professional teams to deepen; they do not replace formal planning and do not constitute government-approved conclusions. Materials come only from official announcements, public policies, repository registrations, and cleared user data; text, geometry, figures, HTML, and PDFs are generated by the declared AI agent or use cleared public assets; see report/copyright_statement.md. Risks are recorded across eight dimensions in risk.json: data privacy, implementation complexity, public acceptance, operations cost, policy uncertainty, spatial dispute, technology maturity, and equity/inclusion. Pending data: official boundaries, key-area polygons, regulatory conditions, existing buildings and ownership, road redlines, heritage ranges, and utility data; the whole chain will be recomputed when they arrive.

Boundary clause: all spatial proposals above are conceptual suggestions, reference schemes, or material for professional teams to deepen.
