

京张相遇公地

JINGZHANG ENCOUNTER COMMONS

Let dense talent create meaningful connections.

AI lowers the cost of encounter; people decide whether to travel together.

One Spine • Three Commons • Two Wings • Six Seams • Twelve reversible scenarios

Document Control and Boundary Status

- Author directory: feixukeji / jingzhang-encounter-commons.
- Primary language Chinese; English is a complete, isomorphic counterpart; version v1.0.
- The overall area and three key areas use provisional rough geometry; recompute the full package when official data arrive.
- This is an open co-creation concept, not statutory planning, professional design, or a government determination.
-

An Intelligent Commons That Does Not Identify People

- Rail organised flows of people and goods; Zhongguancun organised knowledge and enterprise; AI can organise public tasks and shared resources more transparently.
- AI matches tasks, spaces, times, and authorised resources only. It does not match people, build persistent profiles, or determine eligibility.
- Encounter Protocol: public invitation → voluntary join → human host → shared output → public review → exit anytime.

Evidence, Sources, and Gaps

- Primary basis: the public announcement, Agent taskbook, repository standards, and Haidian government pages.
- Mechanism cases: Punggol, Varaamo, Seoul shared spaces, Quartier Jeunes, Kendall Square, and Paris UrbanLab.
- Unknown: official polygons, controls, ownership, heritage/transport/municipal evidence, investment, and operating agreements.
- Cases transfer mechanisms, never scale, authority, performance, or commitments.
-

Three-Level Scope: Strategy—System—Prototype

01 JINGZHANG ENCOUNTER COMMONS

One Spine • Three Commons • Two Wings • Six Seams

Turn talent density into public tasks, open time, and shared output

43.6 km²

Coordinated research
announced

11.41 km²*

Overall design
provisional geometry

368.4 ha

Three key areas
announced

Three design decisions

- 01 AI matches tasks–spaces–times–resources, never people.
- 02 Test operations through a hosted, reversible 90-day pilot.
- 03 Publish outputs, corrections, and retirements; delete private input.

* 11.41 km² = EPSG:4548 provisional polygon calculation

Provisional boundary • conceptual urban-design diagram • not for surveying, approval, or construction

site_boundary • key_areas • roads • green_space • public_space • v1.0 / 2026-08-09 • Agent-generated original diagram

- 43.6 km² coordinated layer: connect universities, research, firms, communities, and regional resources.
- Approx. 11.4 km² overall layer: organise public-space, service, walking, and operating networks.
- 368.4 ha key layer: Zhongzhiyuan 192.1 ha, AI Origin 104.3 ha, Dazhongsi 72.0 ha; all announced figures, with provisional map geometry.

Overall Structure: One Spine, Three Commons, Two Wings, Six Seams

01 JINGZHANG ENCOUNTER COMMONS

One Spine • Three Commons • Two Wings • Six Seams

Turn talent density into public tasks, open time, and shared output

43.6 km²

Coordinated research
announced

11.41 km²*

Overall design
provisional geometry

368.4 ha

Three key areas
announced

Three design decisions

- C 01 AI matches tasks–spaces–times–resources, never people.
- C 02 Test operations through a hosted, reversible 90-day pilot.
- C 03 Publish outputs, corrections, and retirements; delete private input.

* 11.41 km² = EPSG:4548 provisional polygon calculation

Provisional boundary • conceptual urban-design diagram • not for surveying, approval, or construction

site_boundary • key_areas • roads • green_space • public_space • v1.0 / 2026-08-09 • Agent-generated original diagram

- The Encounter Spine is a public-space and programme sequence, not a new road or railway.
- Three Commons verify, co-create, and exchange; two wings contribute services and public problems; six seams audit east–west access.

Land Use, Buildings, and the Adaptive-Reuse Gate

02 JINGZHANG ENCOUNTER COMMONS

Functional Overlay and Adaptive Reuse

Complete coverage for topology checks; not existing, ownership, or statutory land use

Provisional boundary • conceptual urban-design diagram • not for surveying, approval, or construction

Functional research overlay

- 0802 R&D + open collaboration
- 1401 Park + shared open space
- 05 Industry + professional services
- 0702 Community + youth services

Carrier decision gate

- 01 Ownership + current use
- 02 Structure / fire / MEP
- 03 Heritage / access / noise
- 04 Operator + maintenance funding

Remain unknown

FAR, height, total floor area, parking, demolition, underground works

Decide only after professional evidence

land_use • buildings • public_space • green_space • metrics • v1.0 / 2026-08-09 • Agent-generated original diagram

- Four complete-coverage layers support topology and functional coordination, not existing or statutory land use.
- Three building envelopes are adaptive-reuse carrier types, not surveys, ownership records, or demolition decisions.
- FAR, height, total floor area, parking, and demolition remain unknown.

Walking, Rail, Municipal Systems, and Blue-Green Commons

04 JINGZHANG ENCOUNTER COMMONS

Arrive—Cross—Enter—Stay—Exit

One audit combines walking, blue-green comfort, accessibility, and event safety

Continuity chain

- 01 ARRIVE**
station / district entry
- 02 CROSS**
safe wait + alternative
- 03 ENTER**
legible wayfinding
- 04 STAY**
shade, quiet, access
- 05 EXIT**
visible exit + dispersal

概念剖面 / CONCEPT SECTION

No camera prerequisite • offline capable • shrink or close when capacity is exceeded

Provisional boundary • conceptual urban-design diagram • not for surveying, approval, or construction

roads • green_space • public_space • constraints • risk.json • v1.0 / 2026-08-09 • Agent-generated original diagram

- Audit continuity through arrive—cross—enter—stay—exit.
- Stations are service-transfer interfaces; six connections are not bridge, tunnel, or engineering alignments.
- Paper task cards, human hosts, and fixed desks preserve basic service during outages.

Three Key-Area Prototypes

Three Commons • Three Innovation Prototypes

One Encounter Protocol, distinct validation roles; all sites await official geometry and field checks

01
COMMON PROBLEM YARD

验证 VERIFY

C 01 Open problem wall

C 02 Controlled test table

C 03 Failure review bench

Contribution landmark

First Open Table

AI suggests; humans release; exit anytime; no private relationship record

02
COMMON TABLE YARD

共创 CO-CREATE

C 01 Cross-campus table

C 02 Multilingual newcomer desk

C 03 Mentor + OPC clinics

Contribution landmark

Contribution Moment Wall

AI suggests; humans release; exit anytime; no private relationship record

03
COMMON CITY YARD

交换 EXCHANGE

C 01 First-use interface

C 02 Co-edited cultural guide

C 03 Citizen + enterprise review

Contribution landmark

Centennial Junction

AI suggests; humans release; exit anytime; no private relationship record

Provisional boundary • conceptual urban-design diagram • not for surveying, approval, or construction

key_areas • buildings • public_space • spatial.json • v1.0 / 2026-08-09 • Agent-generated original diagram

- Zhongzhiyuan Common Problem Yard: public problems and controlled validation.

AI Origin Common Table Yard: a ninety-day candidate pilot for cross-campus, venture, multilingual, and public services.

Dazhongsi Common City Yard: first use, cultural co-editing, and public feedback.

Zhongzhiyuan Common Problem Yard

- Rule: publish the problem before recruiting the technology.
- Kit: open problem wall, reconfigurable test table, separated demo strip, and failure-review bench.
- Human gates: data/ethics/safety review, venue release, physical stop, and public retrospective.
- Landmark: First Open Table, displaying only the problem, conditions, and public output.
-

AI Origin Common Table Yard

- First low-cost ninety-day pilot candidate: cross-campus table, mentor clinic, OPC compliance, multilingual newcomer desk, and talent/public-service navigation.
- People can browse without an account and register on site; AI suggests from public tags, capacity, language, and time only.
- Landmark: Public Contribution Moment Wall, recording outputs, corrections, translations, tests, and retirements.

Dazhongsi Common City Yard

- Bring R&D outputs into legible, closable, reviewable civic first-use settings.
- Co-edited culture, limited evening demos, quiet feedback, and accessible viewing require event-specific approval.
- Landmark: Centennial Junction—from rails connecting geography to open collaboration connecting knowledge.
-

Seven Personas and Six Mechanism Cases

- Personas: student/young researcher, OPC founder, R&D engineer, resident/community group, international newcomer, frontline operator, and access-first visitor.
- Personas express a current task and entry barrier; they are not data objects and never support ranking or sensitive inference.
- Cases show that accessible time, legible invitation, trusted hosting, and preserved public output are scarce urban resources too.

Twelve Scenarios and Three Bounded Testbeds

S01 Open problem	S02 Multilingual host	S03 Access/risk	S04 Cross-campus
S05 Mentor hour	S06 OPC compliance	S07 Service navigation	S08 Test partners
S09 Community co-design	S10 Culture co-edit	S11 Evening demo	S12 Encounter Week

- S01 task matching, S02 multilingual hosting, and S03 event access/risk assistance are the three test/validation scenarios.
- S04–S12 cover cross-campus projects, mentoring, OPC, public services, test-partner calls, community co-design, culture, evening demos, and annual Encounter Week.
- Shared gates: minimum data, rule-first filters, human release, public output, expiry deletion, and immediate exit.

Ten Projects, Three Phases, and Metric Evidence

05 JINGZHANG ENCOUNTER COMMONS

Metrics Are Traceable Decisions, Not a Number Wall

GeoJSON → formula → metric → drawings/HTML → four review gates

Provisional boundary • conceptual urban-design diagram • not for surveying, approval, or construction

metrics.json • geometry/*_geojson • self_check • compliance matrices • v1.0 / 2026-08-09 • Agent-generated original diagram

- Phase 1 Validate: 0–90 days; Phase 2 Network: 4–12 months; Phase 3 Embed: after 12 months. All windows are conceptual.
- Ten projects start with a public-problem/space-time ledger and develop through three Commons, six access audits, rotating services, a contribution archive, and annual programming.
- Geometry metrics are recomputable; design inventories are countable; FAR, height, investment, and municipal capacity remain unknown.

Risk, Rights, and Next Step

- Principal risks: privacy profiling, spatial error, ownership/heritage/fire/noise, model error, digital exclusion, and hollow operations.
- Controls: never match people, minimum data, offline equivalent, reversible-first, professional gates, two-cycle review, and explicit retirement.
- Original graphics contain no third-party basemap, photograph, or trademark; Noto Sans SC is used under the OFL.
- Next: rerender, finalise, self-check, and preflight against latest main; recompute the entire package when official geometry is published.
