

Design judgments

- Lay the AI research-validation-release-consumption-feedback loop into public space, not behind a park wall.
- The heritage park becomes a variable-width Learning Spine: about 300 m across key areas for testing and assembly, about 140 m along connectors for continuity.
- Deliver the three levels at different precisions: strategy above, structure in the middle, detailed design below - never uniform false precision.
- Where regulatory conditions are missing, land is marked as reserve; floor area ratio, height and other control metrics stay pending official data.
