A line that once carried goods now runs: an urban AI open test main line along the Jing-Zhang heritage park, three stations and two switches, organising industry, public space and governance.

Coordinated research area	43.6 km²
Overall design area (announced)	11.4 km²
Overall design area (recomputed)	11.41 km²
Key areas (announced area)	368.4 ha
Key area count	3
Green ratio (recomputed)	21.5%
Public space ratio (recomputed)	18.0%

3 stations · 2 switches · S→N 三站两岔 · 自南向北

International urban design call · open-source agent entry
Submission by GitHub @xiaowuzicode · starixs · Token Block
A3 booklet 19 pp · A0 boards 7 · drawn by script from GeoJSON & metrics.json

Executive summary

方案摘要

Concept & structure

On single-track railways a driver could enter a section only while holding its token, and no second token was issued until the first came back. This proposal applies that hundred-year-old safety rule to urban AI governance: the Jing-Zhang heritage park becomes one continuously operated, publicly bookable urban AI open test line — one token, one section, returned before the next is issued. The three stations are where the line opens to the city; the two switches bring the east and west wings onto the main line.

Run a limited window

运行限定窗口

...

4

Return to public use

归还公共使用

Hard rules: only one token may be on the line at a time; a named operator and a declared data boundary are admission conditions; the human review point cannot be cancelled by automation; out-of-boundary collection revokes the token; no installation may break the step-free route.

Offline protocol replay (simulation.json, synthetic)

Replay tasks	80
Negative branches (rule refused correctly)	55
Machine-readable rule index	10
Replay outcome / audit completeness	100% / 100%

The four aggregates are recomputed from the task records by the repository validator; replays are not field evidence or an approval.

Three governance layers

Line Operator

线路运营方

Keeps the token ledger; issues and revokes

Switch Council

道岔联席会

Wing access & objections, published deadlines

Scenario Admission Panel

场景准入委员会

Reviews data boundaries & human review points

Stop conditions (when to pause or roll back)

An objection unresolved past its published deadline; or collection beyond the declared data boundary.

A digital channel running while its non-digital equivalent is unavailable; or the step-free route broken by an installation.

Official regulatory, heritage or rail data contradicting a spatial assumption here — recompute, do not argue.

Phasing, honesty & index

Near-term: two stations first

276.6 ha

Mid-term: connect both switch wings

482.0 ha

Long-term: full line through-running and north marshalling

382.6 ha

Honesty boundary

The base boundary is provisional and rough — not an official redline or a basis for exact areas; every spatial move is a conceptual suggestion / reference scheme for professional teams to deepen; nothing here is statutory planning, government approval, confirmed implementation or an investment commitment.

scripts/scaffold_ai_submission.py + participant-side re-runnable generators for geometry, metrics, figures, drawings and the offline visual page

Four hard rules for these drawings

Boundary honesty: the submitted boundary is the repository provisional rough boundary, not an official redline; always drawn low-contrast dashed and annotated, with all metrics recomputed once official polygons are released.

Metric honesty: FAR, building height, building density, road redline width and road area are missing from public sources; drawings always read "pending approved regulatory conditions" and never a guessed value.

Every spatial move is a conceptual suggestion / reference scheme for professional teams to develop further, not statutory planning, government approval, confirmed implementation or investment commitment.

Data traceability: every area, ratio, count and scope figure on the drawings is read at plot time from metrics.json and compliance_matrix.json, never hardcoded in the script.

Base boundary is a provisional rough outline — not an official redline, not a basis for exact areas.

All spatial proposals are conceptual suggestions / reference schemes for professional teams to develop further; they are not statutory planning, government approval, confirmed implementation or an investment commitment.

FAR, building height, building density, road redline and road area: pending approved regulatory conditions.

3 scopes & boundary status

三层范围与边界状态

3-scope area relations

Coordinated research area

Overall design area

Key area scope

Areas map to square side by square root; squares show magnitude only, not scope shape.

Coordinated research area

43.6 km² (announced)

N to the 5th Ring Rd, E to the Jingzang Hwy, S to Xizhimenwai St, W to Wanquanhe Rd.
geometry_status: exact_polygon_missing_provisional_available

Overall design area

11.4 km² (announced)

Urban and industry districts within 1-2 km of the Jing-Zhang heritage park; N to the 5th Ring Rd, E to Xueyuan Rd and Xitucheng Rd, S to Xizhimenwai St, W to Dazhongsi East Rd and Heqing Rd.
geometry_status: exact_polygon_missing_provisional_available

Key area scope

368.4 ha (announced)

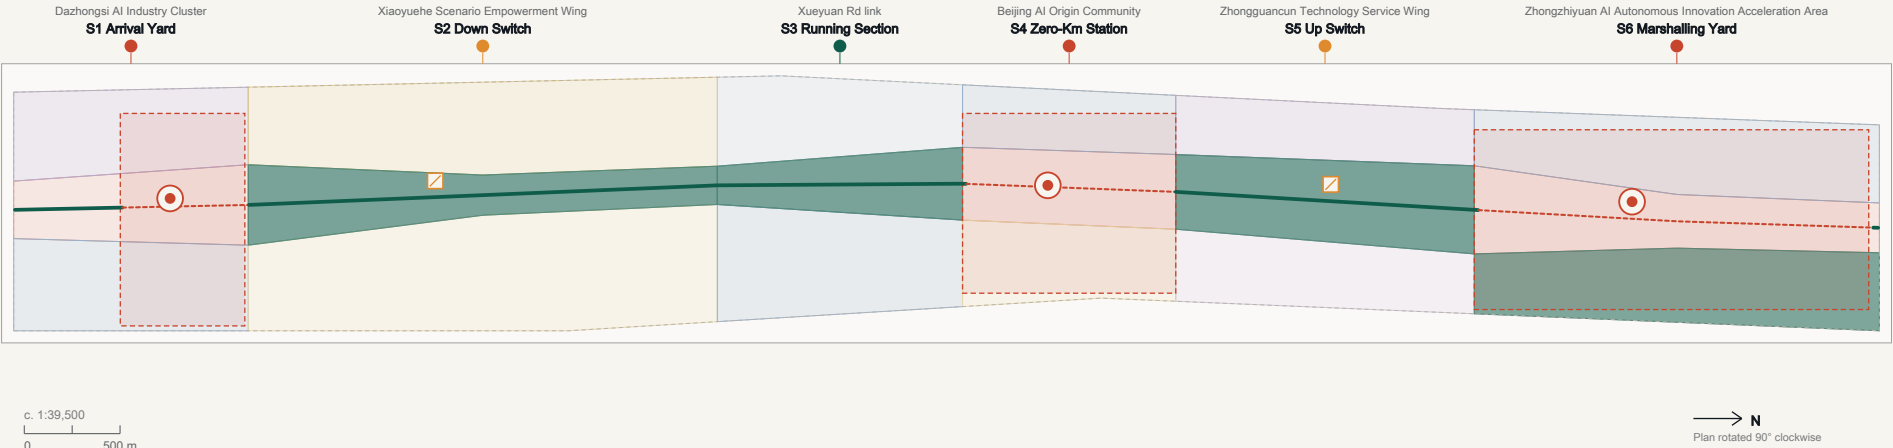

North to south: Zhongzhiyuan Acceleration Area, Beijing AI Origin Community, Dazhongsi AI Industry Cluster.
geometry_status: exact_polygon_missing_provisional_available

Geometry recomputed site_area_sqm	11.41 km ²
Land use layer total land_use_total_area_sqm	11.41 km ²
Key area total key_area_total_area_sqm	369.3 ha

Base boundary is a provisional rough outline — not an official redline, not a basis for exact areas.

All spatial proposals are conceptual suggestions / reference schemes for professional teams to develop further; they are not statutory planning, government approval, confirmed implementation or an investment commitment.

Overall design area & key area index

Naming system (railway lexicon)

S1	Arrival Yard	到发场	Dazhongsi AI Industry Cluster Announced 72.0 ha recomputed 72.0 ha
S2	Down Switch	下行道岔	Xiaoyuehe Scenario Empowerment Wing
S3	Running section	区间	Xueyuan Rd link
S4	Zero-Kilometre Station	零公里站	Beijing AI Origin Community Announced 104.3 ha recomputed 104.3 ha
S5	Up Switch	上行道岔	Zhongguancun Technology Service Wing
S6	Marshalling Yard	编组场	Zhongzhiyuan AI Autonomous Innovation Acceleration Area Announced 192.1 ha recomputed 192.9 ha

South to north: S1 Arrival Yard is the south access front, S6 Marshalling Yard the north acceleration end; two switches give east-west stitch and scenario access. Both are conceptual; position and delivery need regulatory, transit and title study.

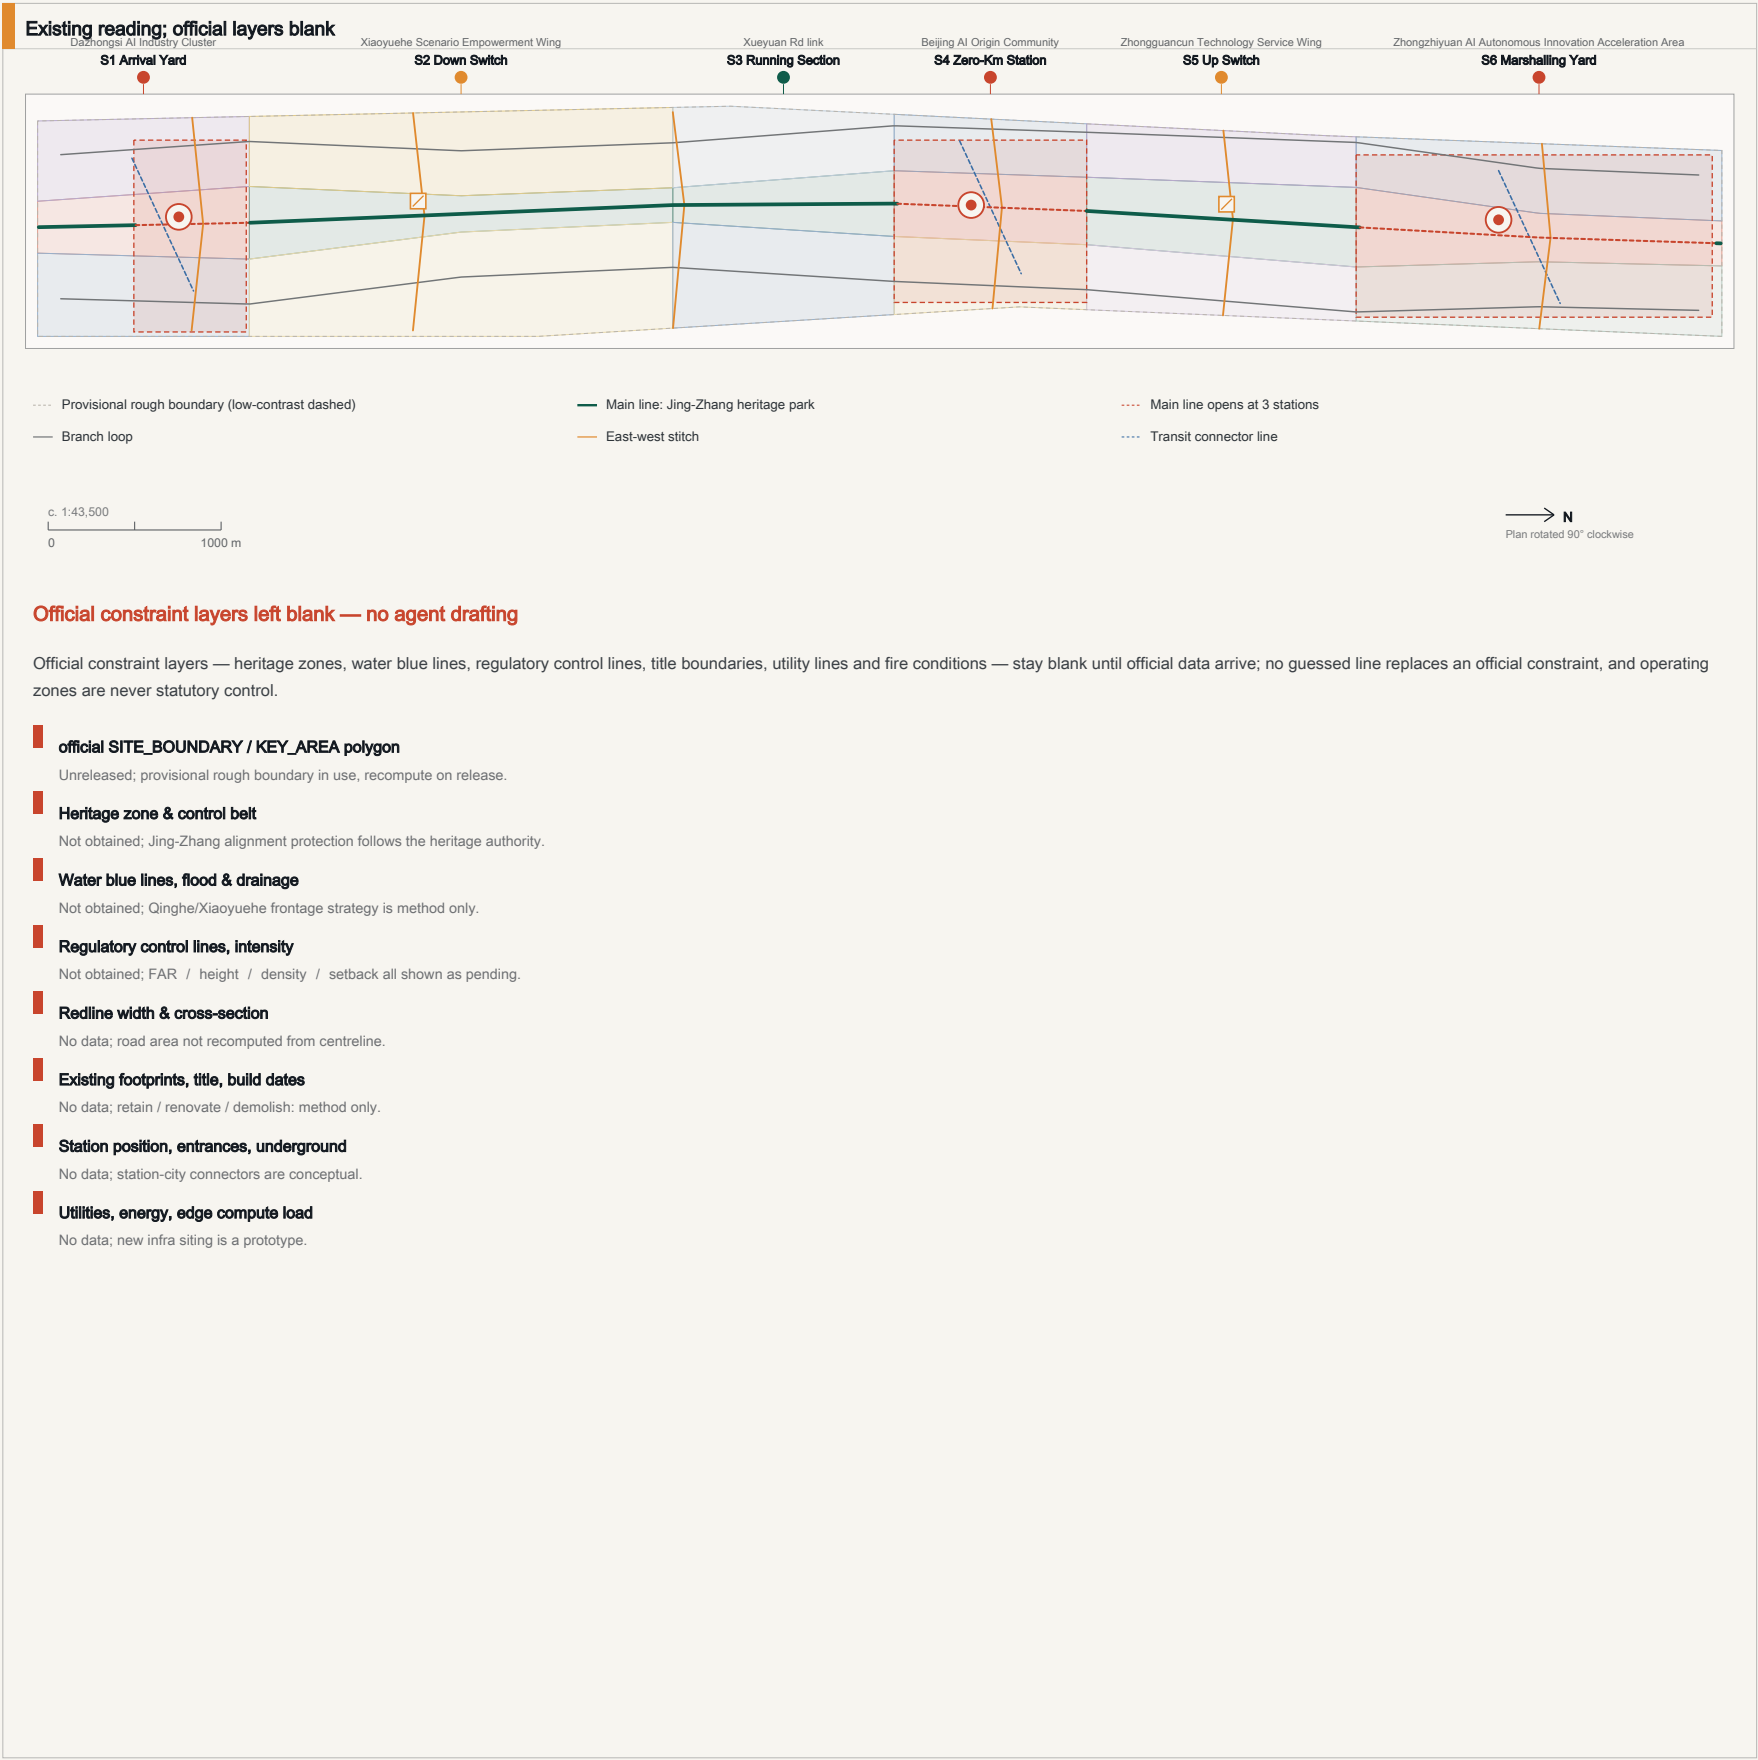

Boundary status

official_boundary	False
boundary_precision	provisional_rough
geometry_role	provisional_constraint
source_id	PROVISIONAL-BOUNDARY-TEXT-AND-BBOX
key_area_boundary_precision	provisional_rough

For AI-agent generation, display and provisional self-check only; not an official redline, approval basis, or exact-area basis.

3 roles (notice)

● Centennial Jing-Zhang culture belt

● Urban AI life experience belt

● AI fusion innovation belt

The innovation chain is conceptual: space, operators and open rules for each link need further study with regulatory, title and industry input.

A future urban form fit for AI

A line that runs

Token block system today: the whole main line is bookable, operable, auditable — one token, one running section; at close it returns to public use.

Interface

The three key areas are open interfaces on the line, not gated campuses: platform plazas carry arrival, release and display; four-quadrant links stitch station to city.

Switch=stitch

Two switches feed communities, campuses and parks into the main line, closing walking and cycling breaks.

Green as base

The park green is both ecological base and physical carrier of open testing, avoiding a dedicated test facility.

Rules first

Every scenario carries a named operator, declared data limits and a human review point, never auto-cancelled; no individual profiling, no named vendor.

Spatial supply (recomputed values)

Green area

245.7 ha

Green ratio

21.5%

Public space area

206.0 ha

Public space ratio

18.0%

Slow route length

16,730 m

East-west stitch

6

User types, operating limits

Open-source devs

Needs: releases, collaboration, testing, community standing

Boundary: no personal trajectories; event data aggregated only

Start-ups

Needs: low-cost space, compute access, product test ground

Boundary: compute and data services need separate authorisation

Lead firm visitors

Needs: display, business, international reception, hiring

Boundary: brand marks and cases need clearance

Residents

Needs: commuting, leisure, community services, low-impact renewal

Boundary: no resident profiling for commercial recommendation

Campus users

Needs: research transfer, cross-campus work, daily slow mobility

Boundary: campus data and research need authorisation

Bookable segment protocol

Book — install — run a limited window under published rules — return to ordinary public use; named operator, declared data boundary, and a human review point no automation can cancel.

This layer is an operating-zone suggestion the agent may define; it is not statutory planning control, not a heritage or blue-line boundary, and no approval basis. Official constraint layers (heritage, water, regulatory) stay empty until official data arrives; the agent does not draft them.

AI service zones 6 | scenario nodes 12

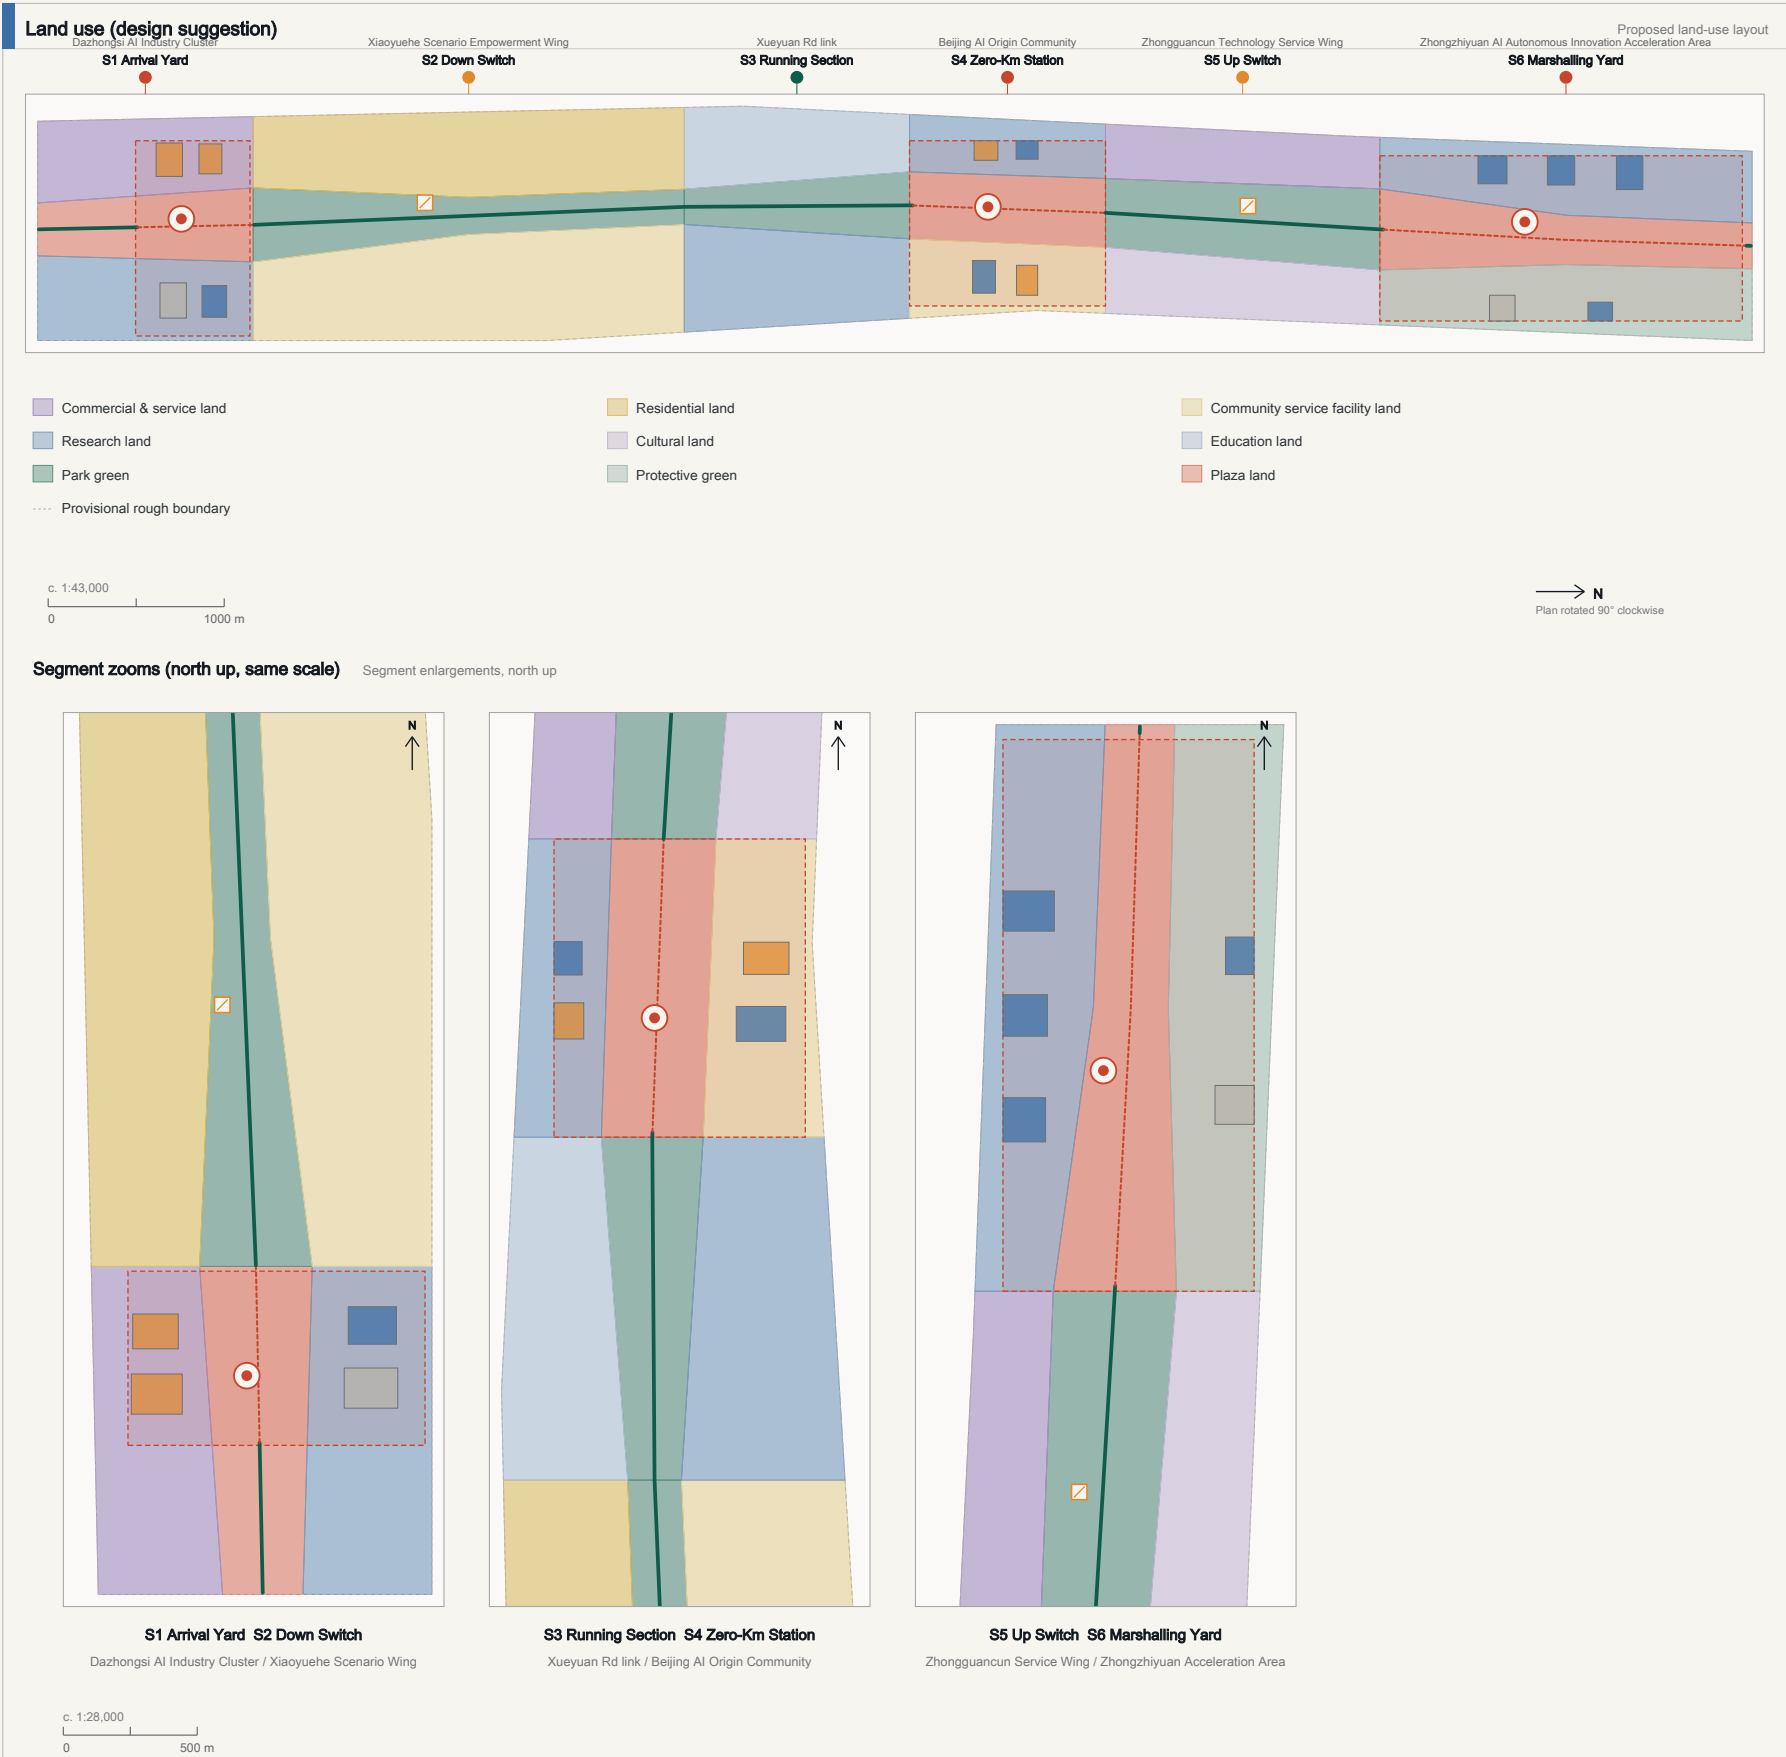

Base boundary is a provisional rough outline — not an official redline, not a basis for exact areas.

All spatial proposals are conceptual suggestions / reference schemes for professional teams to develop further; they are not statutory planning, government approval, confirmed implementation or an investment commitment.

Land use & urban renewal 用地布局与城市更新

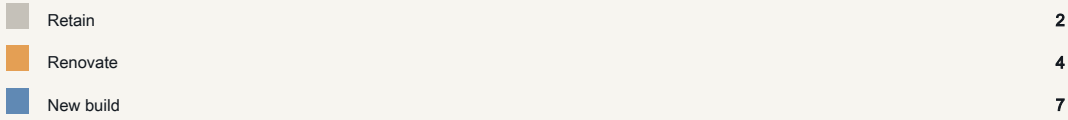

Data & notes

Land use classes & areas (metrics.json recomputed)

Land use layer total land_use_total_area_sqm	11.41 km²
Submitted boundary area site_area_sqm	11.41 km²

Renewal: retain / renovate / demolish

Renewal handle buildings renewal_building_count	13
Building footprint area building_footprint_area_sqm	29.5 ha
Footprint cover, key areas (approx)	8.0%

FAR	Pending approved regulatory conditions
Height	Pending approved regulatory conditions
Density	Pending approved regulatory conditions
Setback & control lines	Pending approved regulatory conditions

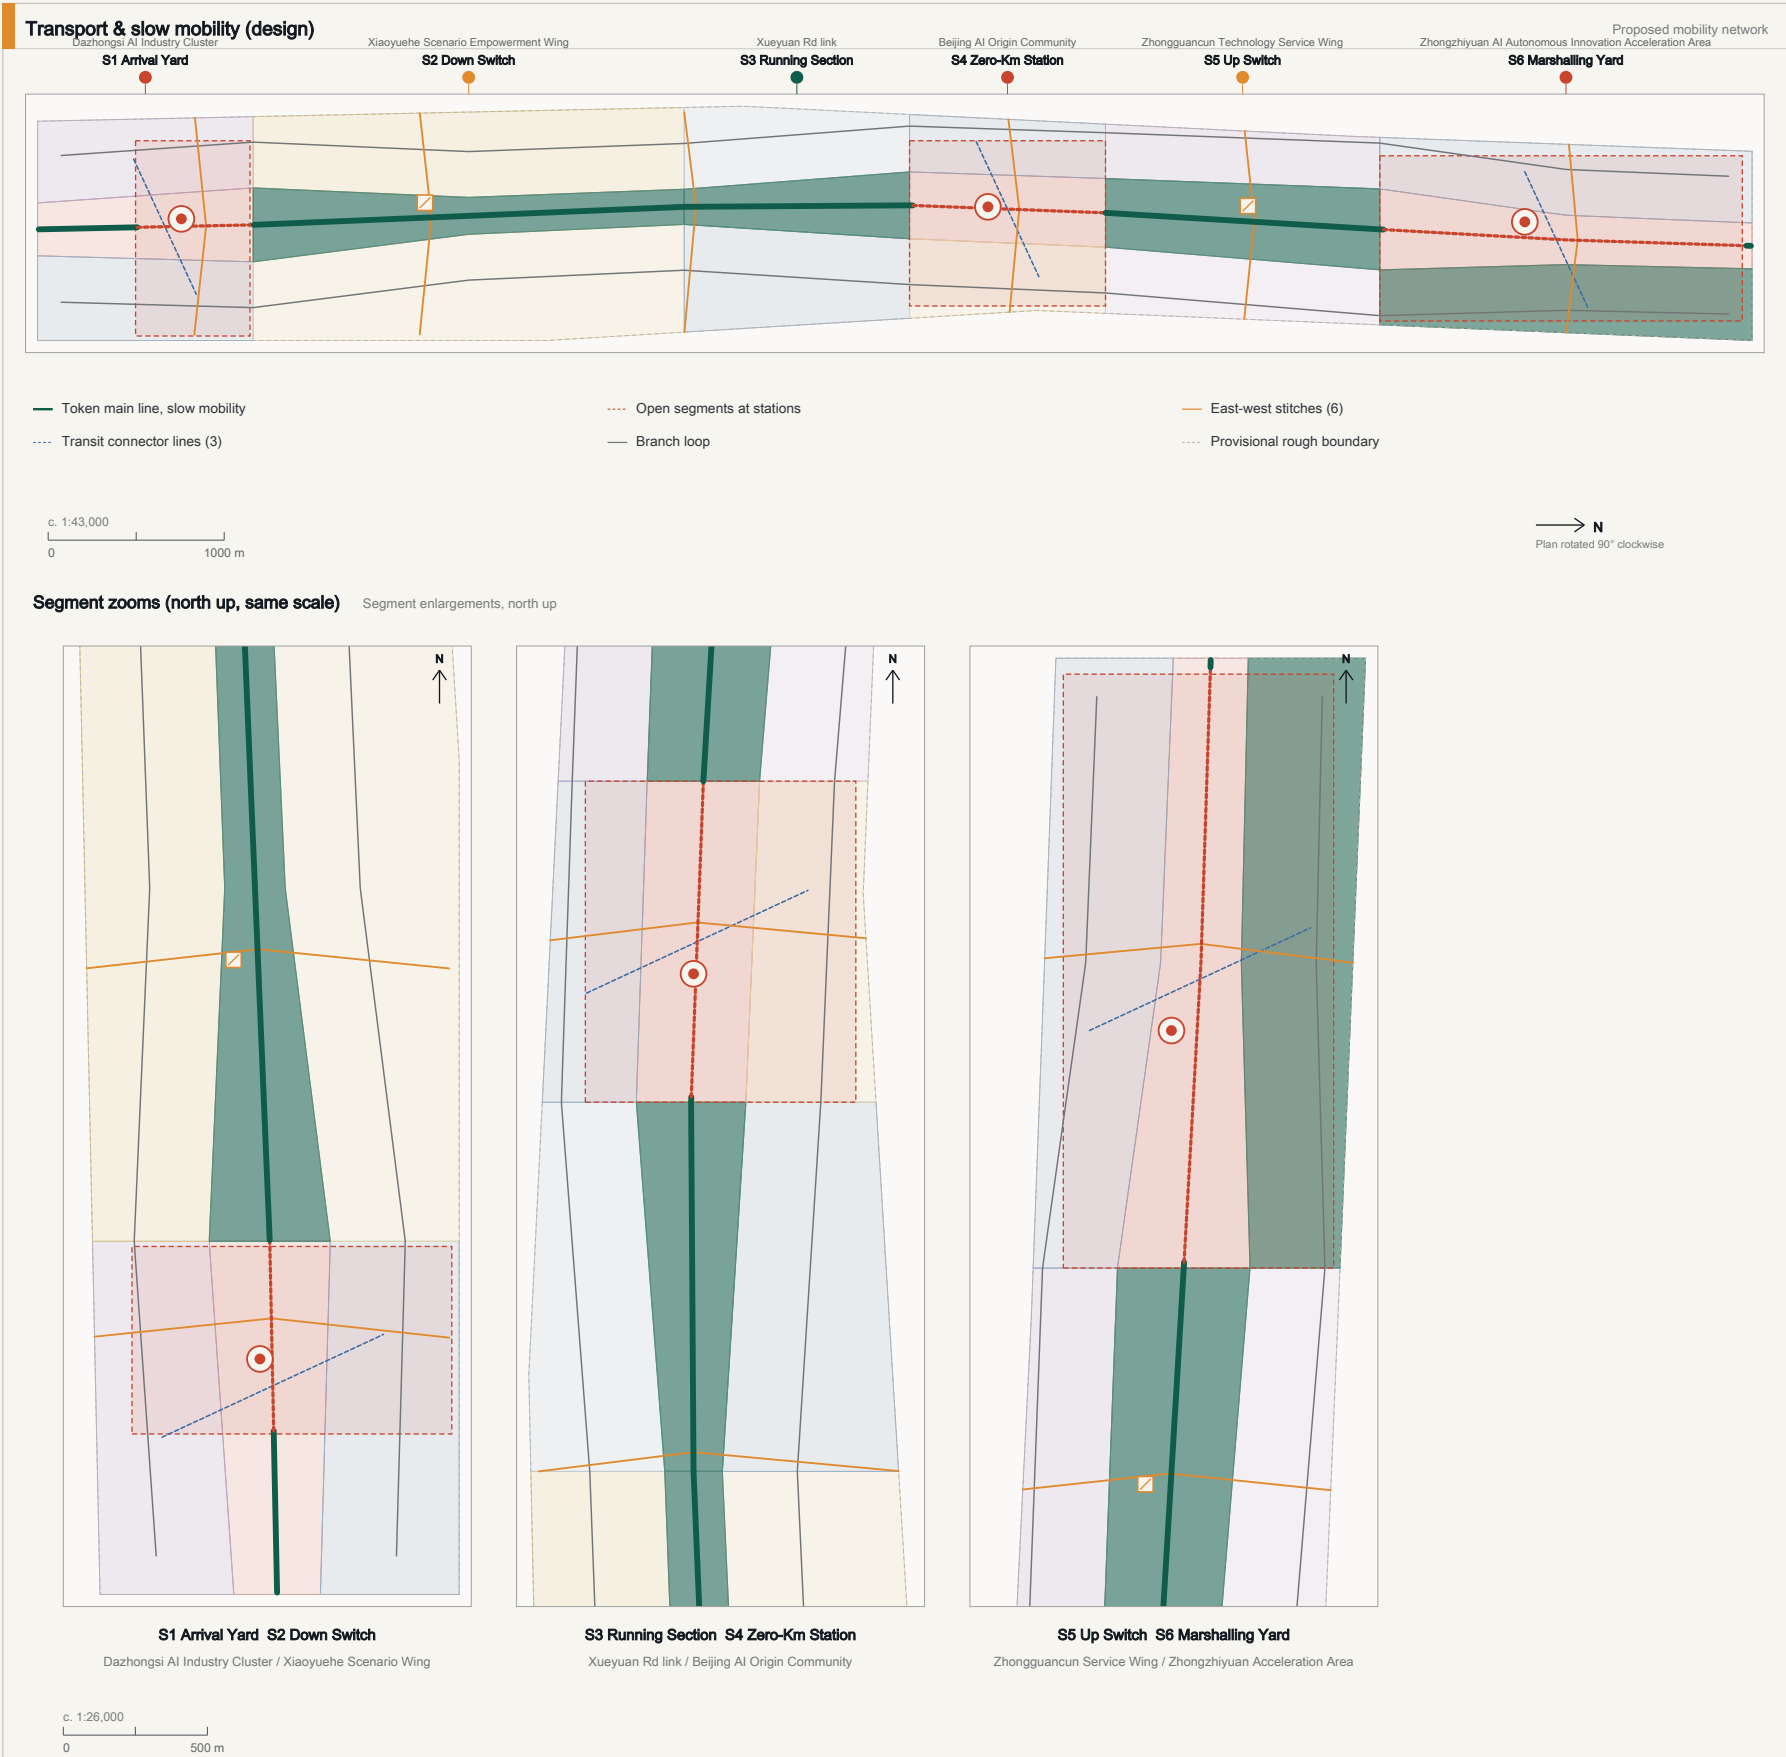

Land use follows a public subset of territorial use-control classes; here it is a design suggestion, with official use, boundary and intensity per the regulatory plan. Footprints are indicative, showing renewal handles; retain / renovate / demolish awaits title and building data.

Base boundary is a provisional rough outline — not an official redline, not a basis for exact areas.

All spatial proposals are conceptual suggestions / reference schemes for professional teams to develop further; they are not statutory planning, government approval, confirmed implementation or an investment commitment.

FAR, building height, building density, road redline and road area: pending approved regulatory conditions.

Roads, rail, slow mobility, utilities交通、轨道、慢行与市政支撑

Data & notes

Roads & slow mobility (recomputed)

Road centreline length road_network_length_m	38,211 m
Slow mobility length slow_mobility_length_m	16,730 m
East-west stitch east_west_stitch_count	6
Transit connector transit_connector_count	3
Road area road_area_sqm	Pending approved regulatory conditions
Road area ratio road_area_ratio	Pending approved regulatory conditions
Redline width & cross-section	Pending approved regulatory conditions
Car and cycle parking standards	Pending approved regulatory conditions

Alignment list (suggested lines)

ROAD-001	Main-line slow path	greenway
ROAD-002	West service-lane loop	branch
ROAD-003	East service-lane loop	branch
CROSS-A	Dazhongsí four-quadrant walk links	pedestrian
CROSS-B	Down Switch east-west stitch	pedestrian
CROSS-C	Xueyuan Rd link crossing	cycleway
CROSS-D	Zero-Km Station east-west stitch	pedestrian
CROSS-E	Up Switch east-west stitch	pedestrian
CROSS-F	Marshalling Yard north crossing	cycleway
TRANSIT-1	Dazhongsí station feeder	transit_connection
TRANSIT-2	Zero-Km Station feeder	transit_connection
TRANSIT-3	Marshalling Yard station feeder	transit_connection

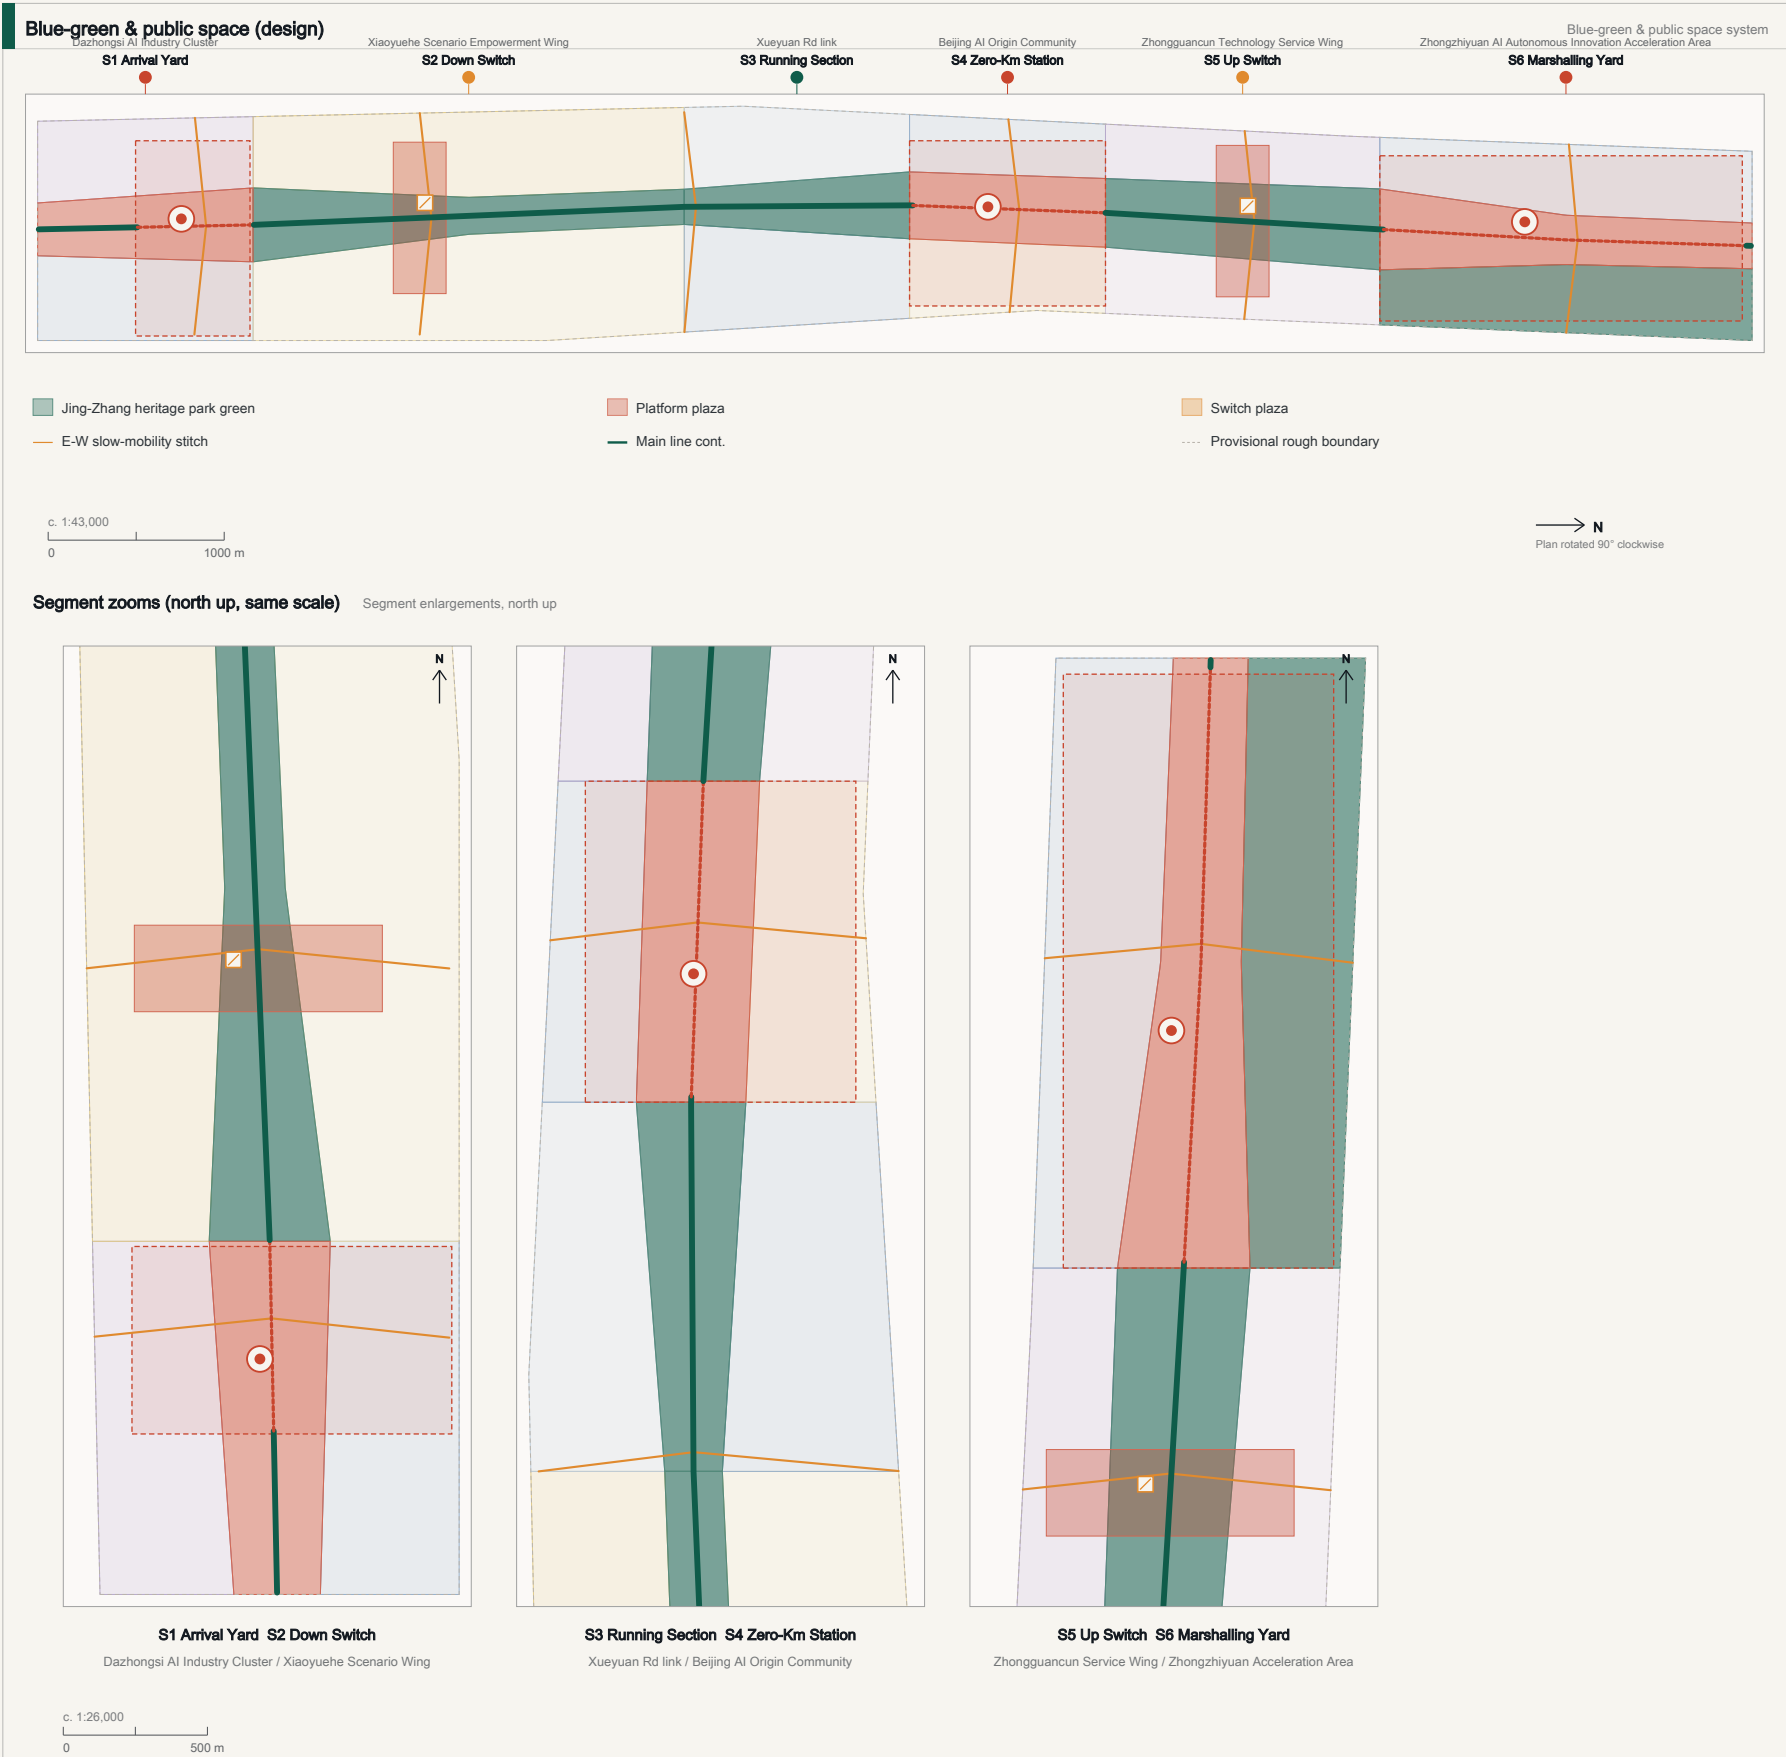

Utilities & new infra strategy

- Edge compute stops and distributed energy sit with public facilities as new infrastructure prototypes; capacity, energy and safety conditions need official utility data.
- Transit integration follows "station–yard–city": platform plazas carry arrival, connectors link stations to the main line, four-quadrant links close junction breaks.
- Utility, drainage, flood, fire and civil-defence data missing; conclusions are method and precondition list only.

Base boundary is a provisional rough outline — not an official redline, not a basis for exact areas.

All spatial proposals are conceptual suggestions / reference schemes for professional teams to develop further; they are not statutory planning, government approval, confirmed implementation or an investment commitment.
FAR, building height, building density, road redline and road area: pending approved regulatory conditions.

Cultural narrative

Centennial Jing-Zhang: token from running permit to scenario permit; the park is memorial and working infrastructure.

Zhongguancun culture: tradition carried by open collaboration, public release and open evaluation, not iconic form.

New AI culture: Zero-Km marker, release hall and honours display make a civic ritual to join.

All brands, fonts, images, likenesses and marks are used only after clearance; drawings use no uncleared material.

Bulk, frontage & height control

This page gives no height or intensity value

Building height, FAR, density, setback and control lines are approved-control items, registered missing in public sources; this scheme gives only relative relations and method, pending approved regulatory conditions.

Low at line, high outward

Both sides of the heritage park stay low and open, shifting height demand to the branch loop.

Stations up, sections calm

The three stations may form legible arrival fronts; running sections stay green and slow, no bulk competition.

Switch align

Frontages at both stitch ends align openings to keep cross-corridor views and walking continuous.

Roofscape

Roofs facing the park and platform plazas fall under character control; no exposed plant.

Existing first

Retained industrial buildings anchor character; new volumes answer by setback and stagger.

Retain / renovate / demolish method

Retain: existing buildings with historic or industrial memory and usable structure — assess before acting.

Renovate: where function no longer fits but structure is usable, open the ground floor first.

New build: proposed only where a functional gap is clear and no public space or green is taken.

Any demolition conclusion needs title, building and date data; this scheme makes no demolition call.

Pilgrimage landmarks, events

Pilgrimage landmark pilgrimage_landmark_count4

AI scenario card ai_scenario_card_count12

Zero-Km marker

S4 Zero-Km platform plaza

Open-source release & honours; yearly inscription

Release hall

S4 Beijing AI Origin Community

Release, code contributions, small roadshows

Innovation showcase

S6 Marshalling Yard

Public face of full-stack innovation & standards

Roadshow lounge

S1 Arrival Yard

Global exchange face for agents, devices and content industry

Global AI innovation events (conceptual)

Scenario day

Windows open by bookable segment under public rules; at close the space returns to ordinary public use.

Global AI Week

Walkable route: heritage culture, open-source community, industry display, roadshows.

Everyday developer community

Daily use of the release hall and collaboration lab, no large events needed.

Standards workshop

Marshalling Yard hosts public standards and safety evaluation.

Events and operation are conceptual suggestions / reference schemes for professional teams to develop further; no confirmed event, permit or investment.

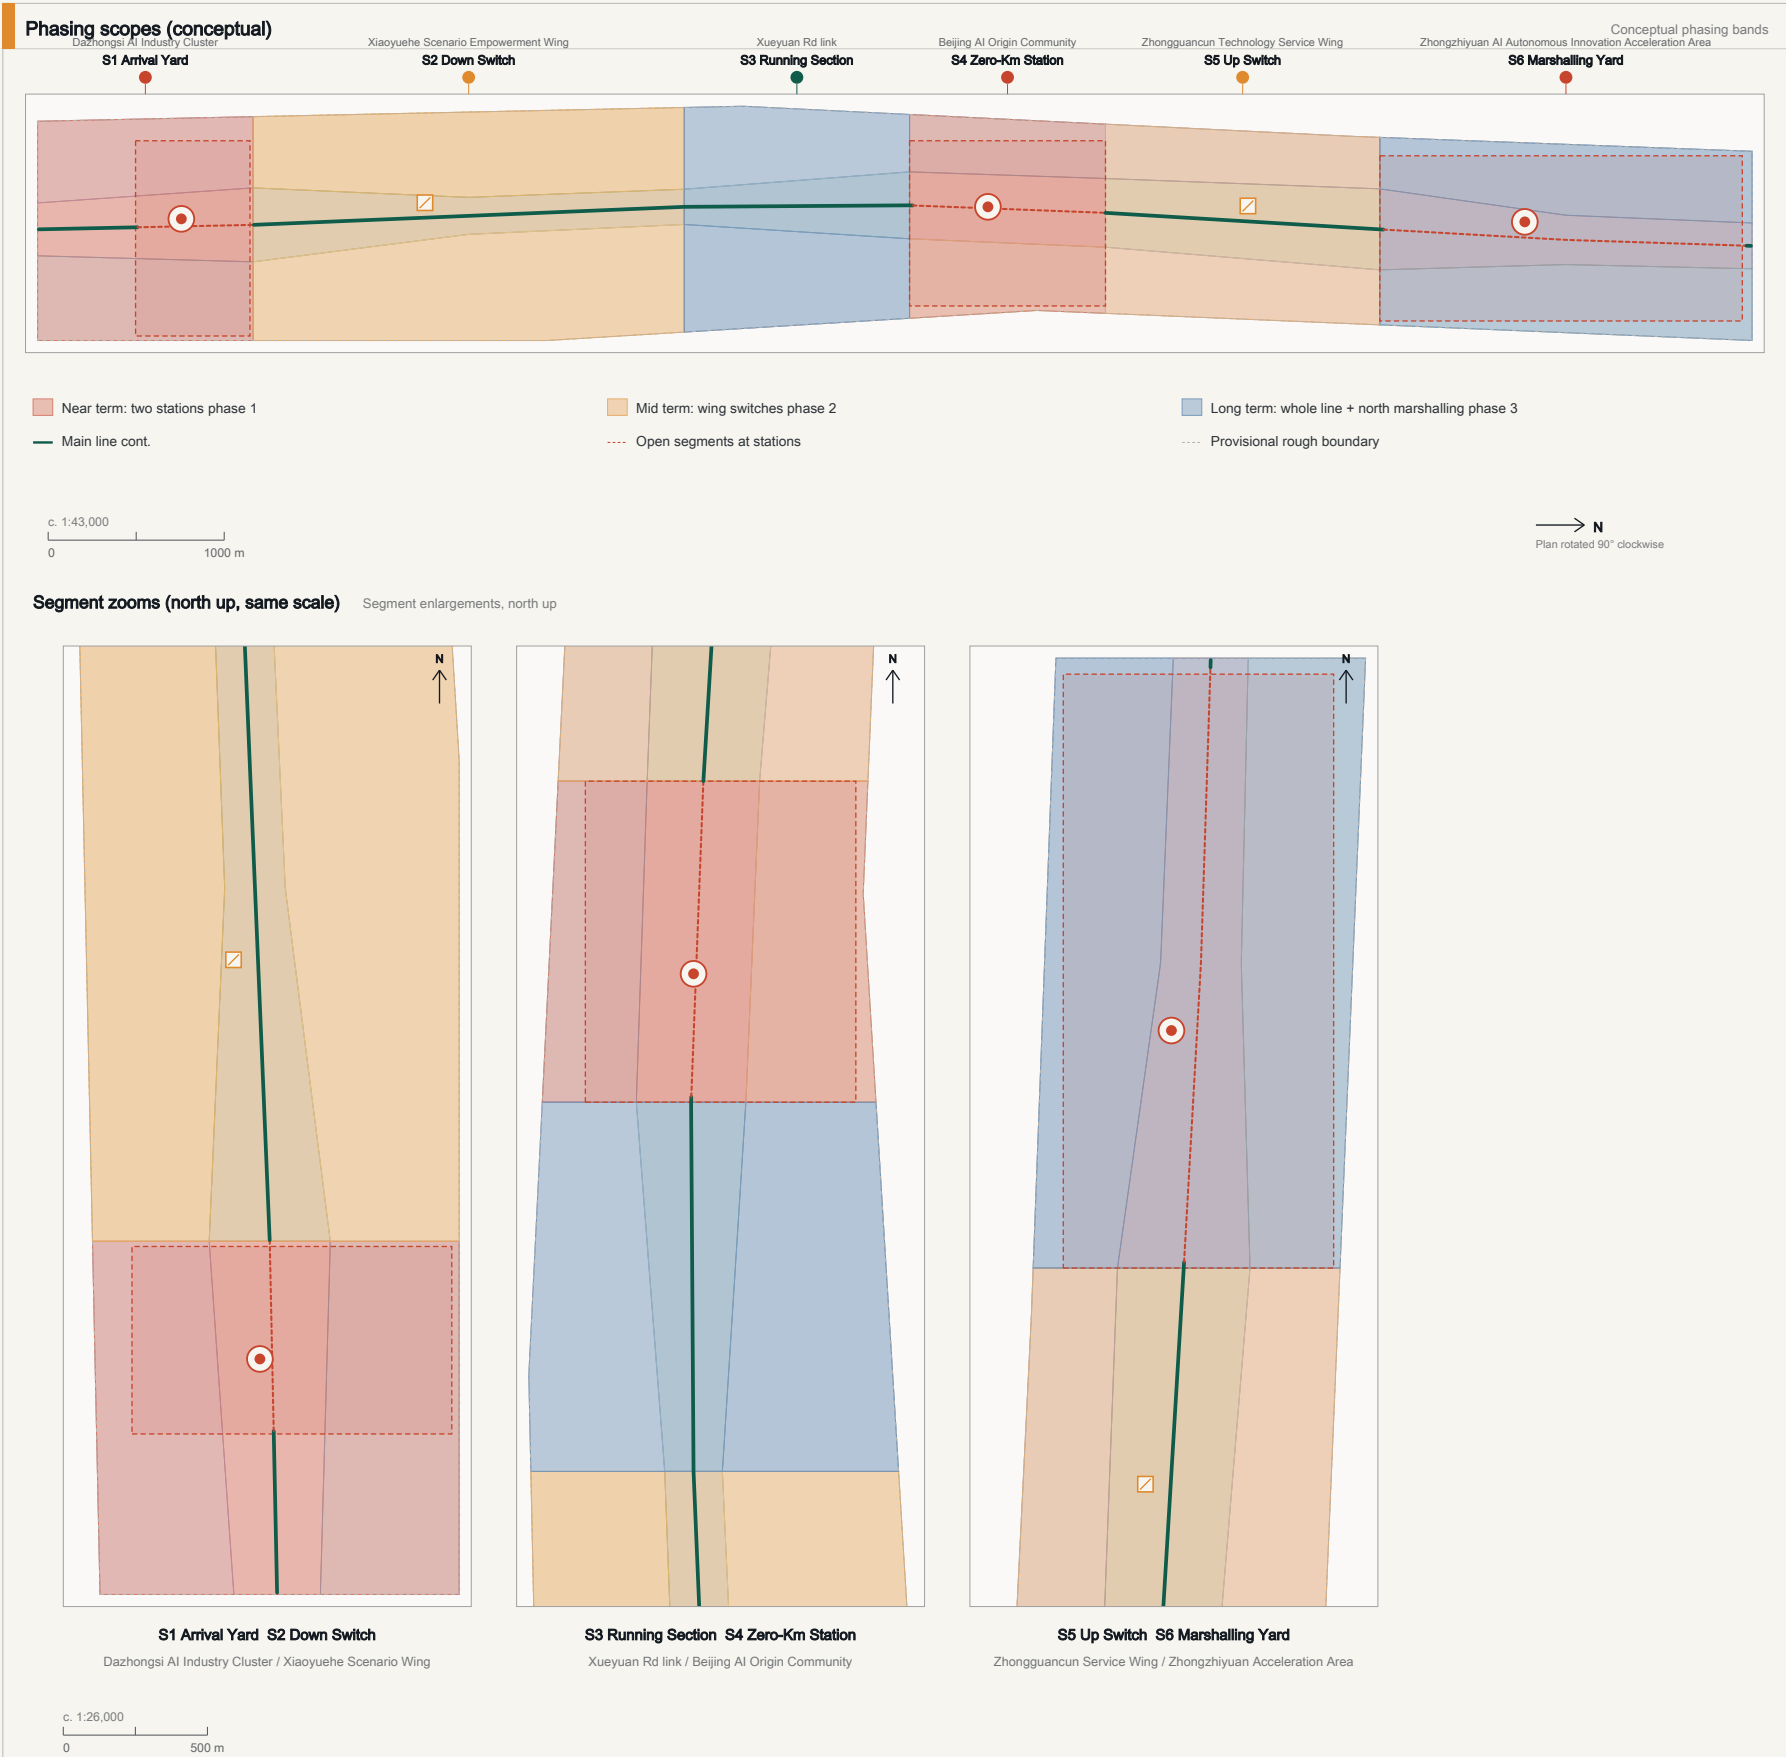

Base boundary is a provisional rough outline — not an official redline, not a basis for exact areas.

All spatial proposals are conceptual suggestions / reference schemes for professional teams to develop further; they are not statutory planning, government approval, confirmed implementation or an investment commitment.

Renewal project list, policy, phasing

更新项目清单、实施政策与分期

Data & notes

Phase areas (recomputed)

	Near-term: two stations first Bands S1, S4 Start with Arrival Yard and Zero-Km Station using light installations, events and open scenarios; no heavy engineering precondition	276.6 ha
	Mid-term: connect both switch wings Bands S2, S5 Open both east-west stitches and switch plazas; connect the two wings to the main line	482.0 ha
	Long-term: full line through-running and north marshalling Bands S3, S6 Complete the running section and deepen the Marshalling Yard; needs approved regulatory, rail & utility conditions	382.6 ha

Renewal project list (conceptual)

JZ-01	Jing-Zhang heritage park slow stitch Needs: road redline, under-bridge space, traffic review	Public space / roads
JZ-02	Marshalling Yard Qinghe edge Needs: river blue line, ecology & flood-control conditions	Blue-green space / display
JZ-03	Zero-Km campus transfer street Needs: campus boundary, ownership, ground-floor uses	Renewal / industry services
JZ-04	Arrival Yard four-quadrant links Needs: rail stations, road junctions, utility lines	Transit / slow mobility
JZ-05	AI public service & edge compute nodes Needs: energy, compute, safety & an operating entity	New infra / services
JZ-06	Global AI Week public route Needs: public-space permits, event safety, copyright clearance	Ops / brand

Policy suggestions

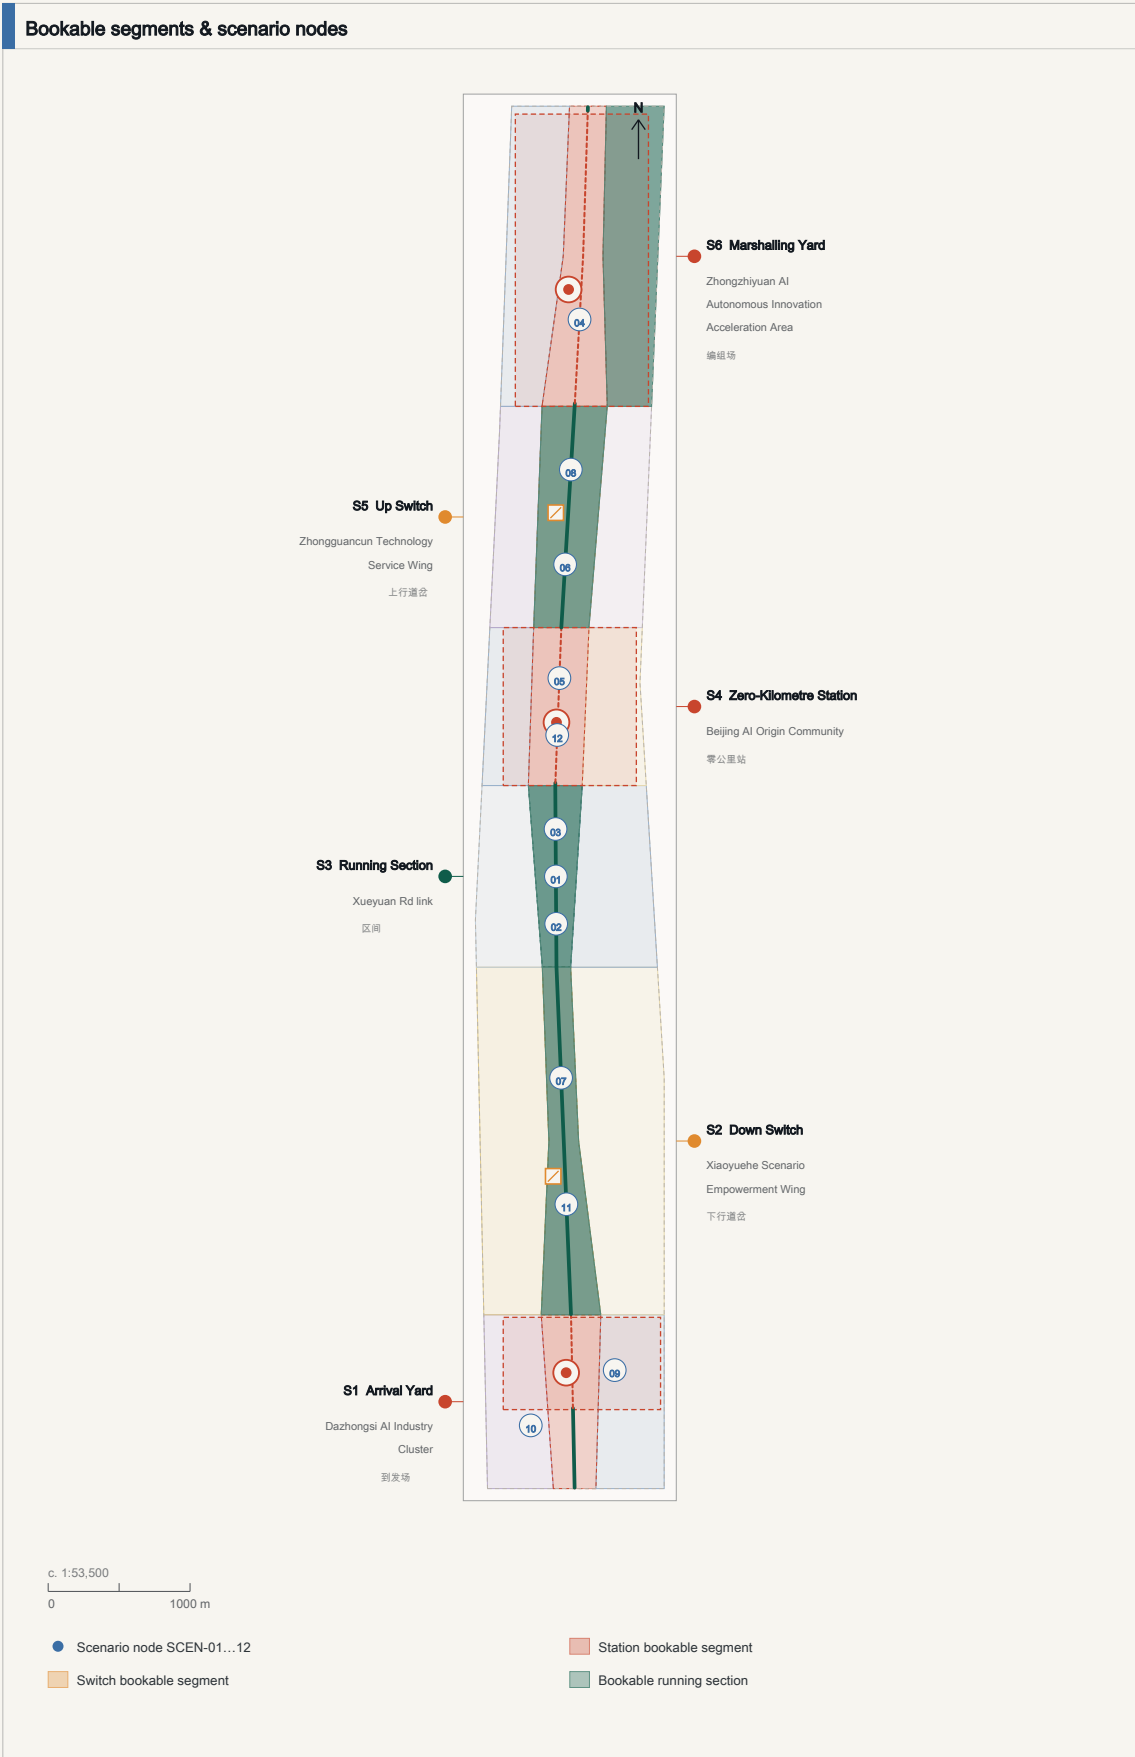

- Near term starts with light facilities, events and platforms, without large works or land take.
- Mid term opens east-west stitches and switch plazas; transport, utility and title terms confirmed in step.
- Long term completes the line and north marshalling, subject to regulatory and utility terms.
- The roughly-100-day call timetable is a submission requirement, not renewal phasing; the two must not be conflated.
- Anything without title, funding, delivery body or approval path is written as delivery risk, not a commitment.

Base boundary is a provisional rough outline — not an official redline, not a basis for exact areas.

All spatial proposals are conceptual suggestions / reference schemes for professional teams to develop further; they are not statutory planning, government approval, confirmed implementation or an investment commitment.

Data rules & human review

One data limit (all scenarios)

Public or authorised data only; no individual profiling; no mandatory vendor; scenarios are conceptual suggestions, not approved operations.

Bookable segment protocol

Book — install — run a limited window under published rules — return to ordinary public use; named operator, declared data boundary, and a human review point no automation can cancel.

6 bookable segments, key scenarios

S1 Arrival Yard bookable segment

Commerce & international scenarios first; events coordinated with station flows

S2 Down Switch bookable segment

Daily services & low-speed delivery first; resident consent and revocation up front

S3 Running Section bookable segment

Continuous-path validation first; longest windows, least disturbance

S4 Zero-Km Station bookable segment

Open-source releases & community events first; public access is not negotiable

S5 Up Switch bookable segment

Enterprise-service and international-exchange scenarios first

S6 Marshalling Yard bookable segment

Evaluation & standards scenarios first, publicly observable

Red lines

- The urban agent can help spot slow-mobility breaks, public space heat, maintenance and event risks, but never replaces planning approval or issues an unauthorised profile.
- Each scenario needs a named operator, data limits and a human review point, never auto-cancelled.
- No named vendor, model or device is required; scenarios are conceptual suggestions, not approved for operation.
- Scenario data aggregated only; resident, campus and visitor profiles not used for commerce.

Base boundary is a provisional rough outline — not an official redline, not a basis for exact areas.

All spatial proposals are conceptual suggestions / reference schemes for professional teams to develop further; they are not statutory planning, government approval, confirmed implementation or an investment commitment.

Definitions

- Class 1: spatial metrics recomputed straight from the submitted geometry (boundary area, green ratio, public space ratio, footprint area, phase areas), all in metrics.json.
- Class 2: control metrics needing the official regulatory plan or brief annexes (FAR, building height, density, setback, road redline and facility standards) are registered unknown with reasons.
- Class 3: performance metrics needing ongoing calibration from operating or industry data (innovation index, talent density, slow mobility access, event participation, scenario use) go to assumptions, not conclusions.
- All known metrics can be recomputed from geometry/*.geojson in EPSG:4548; once official polygons are released everything must be recomputed, not one file swapped.

Area consistency check

Land use total – submitted area	12.0 sqm (0.0001%)
Key areas recomputed – announced	+8,893.0 sqm (+0.24%)
Submitted recomputed – announced	+12,825 sqm

■ Base boundary is a provisional rough outline — not an official redline, not a basis for exact areas.

All spatial proposals are conceptual suggestions / reference schemes for professional teams to develop further; they are not statutory planning, government approval, confirmed implementation or an investment commitment.

FAR, building height, building density, road redline and road area: pending approved regulatory conditions.

Coordinated research area

exact_polygon_missing_provisional_available

Overall design area

exact_polygon_missing_provisional_available

Key area scope

exact_polygon_missing_provisional_available

The official SITE_BOUNDARY and three KEY_AREA polygons are unreleased; this package uses the repository provisional rough boundary. Once official polygons replace it, site boundary, key areas, land use, roads, green space, public space, buildings, phasing and metrics must all be recomputed.

Delivery & ops risk		
Boundary risk	If the provisional rough boundary differs from the official redline, all areas and ratios shift.	Level: high
Reg. risk	FAR, height, density and setback undecided; build scale and form cannot be locked early.	Level: high
Works risk	Clearance, structure and fire egress across the corridor unchecked; stitch feasibility open.	Level: medium
Title risk	Title and delivery body unclear; the renewal list is not a commitment.	Level: high
Utility risk	Utility, energy, drainage and compute data missing; new infrastructure stays a prototype.	Level: medium
Ops risk	Bookable segments and events need permits, safety and insurance; operator undecided.	Level: medium
Data risk	Data sources, consent and minimisation need independent review first.	Level: medium
Rights risk	Brands, fonts, images, likenesses, marks: use only after clearance.	Level: medium
Assumption register assumptions.json (11 items)		
A-CONTROLS-001 · pending_professional_confirmation		
Detailed regulatory controls, road redlines, ownership, municipal utilities, and engineering constraints must be confirmed from official attachments before statutory use.		
A-BOUNDARY-001 · pending_official_data		
The submitted site boundary and the three key-area polygons are the repository's provisional rough boundaries, not an official redline. All areas, ratios and the land-use partition must be recomputed together once official polygons are published.		
A-CONSTRAINT-LAYERS-001 · intentionally_unauthored		
Water system, heritage protection, regulatory control and existing road/rail layers are marked editable_by_agent=false in the site package enum. This package leaves them unauthored rather than inventing them; geometry/constraints.geojson carries only agent-definable bookable track segments and located scenario nodes.		
A-INTENSITY-001 · pending_official_data		
Floor area ratio, total floor area, building height and building density are recorded as unknown because planning_limits.json records them as missing official controls. Only a relative massing intent is stated.		
A-ROAD-AREA-001 · pending_official_data		
Road area and road area ratio cannot be recomputed from centrelines because approved redline widths and cross-sections are not published. Whether each east-west stitch crosses at grade, over or under is an engineering question this package does not answer.		
A-EXISTING-BUILDINGS-001 · pending_official_data		
No current-building survey, ownership record or official parcel geometry exists in the public package. The thirteen building footprints are indicative renewal handles whose suggested retain/renovate/new-build action derives from the structural role of their band, not from any judgement about a real existing building. No demolition conclusion is issued for any real parcel.		
A-PARTITION-RESIDUAL-001 · accepted_tolerance		
The land-use partition is generated by slicing the submitted boundary, so its area equals the site area by construction. A residual of about 12 sqm (1.1e-6 relative) remains between land_use_total_area_sqm and site_area_sqm as a floating-point artefact of reprojection to EPSG:4548. It is not a topological gap; measured gap and overlap are 1.8e-16 and 0 square degrees respectively.		
4 more in assumptions.json (layout limit only, nothing truncated)		

Copyright, compliance, no-claims

Not claimed

No claim of official approval, approved regulatory plan or status.

No claim of final land title, build scale or guaranteed delivery.

No claim of government events, investment or operating licence.

The provisional boundary is never stated as an official redline or a basis for exact areas.

Agent guesses are not approved metrics or engineering findings.

Assets, licences

These A3 / A0 drawings are script-generated vectors; no external images, screenshots, map tiles or third-party assets.

Fonts ship with the system, subset-embedded in the PDF; no remote fonts, scripts or APIs.

All spatial data come from the submitted geometry/*.geojson, metrics from metrics.json, and scope areas from the announcement and the site-package register.

Licences and sources: see sources.json and report/copyright_statement.md.
